ALLIED PRINTING TRADES UNION LABEL COUNCIL SAN FRANCISCO ⑦

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 1. SAN FRANCISCO, WEDNESDAY, SEPTEMBER 11, 1918. Whole No. 2503.

CASUALTIES OF WAR AND PEACE.

The Lists of "Killed and Injured" in Industrial Pursuits.

The casualty lists of war forcibly direct our attention to the sacrifices made by our own flesh and blood in behalf of human freedom. These lists drive home our losses largely because they are aggregated and issued at certain intervals.

The casualty lists of peace would bring home the horror of industry if they were issued in the same manner.

Similarly, if the casualty lists of infantile mortality were issued in that way they would shock every reader with the tragedy contained in them.

The trouble is that the deaths and injuries sustained in industry never are aggregated in the newspapers, other than once a year or once every few years, and then only in the form of dry statistics.

In intensely industrial countries like America, England, France, Germany, etc., scores of thousands lose their lives in industry, while hundreds of thousands are injured, and scores of thousands of little children die—these latter largely because of the poverty of their parents.

As Lady Warwick said early in the war, "It is more dangerous to be a child born in England than a soldier fighting in France."

If our big dailies, for instance, were to issue a list on the lines indicated under headings, "Killed in Industry"; "Injured in Industry"; "Child Mortality"—once a month, the tens of thousands of names would fill page after page.

John Mitchell's Patriotic Address.

Thoughts along these lines doubtless actuated Mr. John Mitchell, for many years president of the United Mine Workers of America, to direct public attention to the casualties of peace in the following splendid address recently delivered at Brooklyn, N. Y.:

"Wherever men meet during these days one thought, one hope is uppermost in their minds. The winning of the war, the destruction of autocratic, militaristic systems of government, the establishment of justice, the perpetuation of liberty and democracy among all peoples of the earth is the question of transcendent importance; and if I reflect the sentiment and the determination of the wage-earning millions of our country the war will not end until the right of peoples to govern themselves is secured and guaranteed unmenaced by military castes and unhampered by autocratic governments. If I diagnose correctly the attitude of the wage-working people of America there will be no peace until the Prussian vandal on bended knee supplicates the forgiveness of God and the mercy of man for the outrages he has perpetrated against civilization and mankind.

"Each day the meaning, the significance of this world struggle becomes more clear. Each day the war is brought closer to our homes and our firesides. Each day more of our sons go forth to do battle in defense of justice and liberty. Each day service flags with their red border, white center, and blue stars appear in greater numbers. This flag is the emblem of service; and now, here and there, appears the silver star, the emblem of wounds sustained and suffering endured; and here and there the gold star, indicating that some of our boys have made the supreme sacrifice, that they have died that liberty may live. The love of life is strong and overpowering; the aged, the cripples, and the sick desire to live; yet there is nothing so sure and certain as death and if a man could elect the circumstances under which he should die who would not choose to die fighting for liberty and for his country?

Our Willing Sacrifices for Freedom.

"While of course we hope and pray, and especially do mothers hope and pray, that our sons may come home; yet it were a thousand times better that they should never return, that their life's blood should enrich the sacred soil of France than that the Prussian autocrat should be permitted to impose his will upon the free and democratically organized governments of the world.

"These are the thoughts and these are the purposes which animate and control all right-thinking, liberty-loving, unselfish, patriotic men and women of this our country. In this determination and in this purpose we shall not falter. The heritage of liberty bequeathed to us will be handed down untarnished and unblemished to our posterity.

"Moreover, while prosecuting the war for the establishment and maintenance of international peace, freedom and justice we shall continue in our determination to maintain industrial and social righteousness in our own country. So far as the solution of our internal and domestic problems will not retard the solution of the great world problem, the organized workers will persist in their efforts to protect the lives and to raise the standards of labor of all those engaged in industrial pursuits. We understand that the victories of peace have their price in dead and maimed as well as do the victories of war. While the bread of the laborer is earned in the sweat of his brow it is eaten in the peril of his life.

"Whether he work upon the sea, upon the earth, or in the mines underneath the earth the laborer constantly faces imminent death; and his danger increases with the progress of the age. With each new invention the number of killed and injured rises; each new speeding up of the mechanisms of industrial life; each increase in the number and size of our mighty engines brings with it fresh human sacrifices; each year the locomotive augments the number of its victims; in each year is lengthened the roll of the men who enter the dark and dampness of the mine never again to return to their homes and loved ones.

"Killed" in Peaceful Pursuits.

"And many are killed without violence; thousands of wage earners lose their lives in factories, mills and mines without the inquest of a coroner. The slow death which comes from working in a vitiated atmosphere; from inhaling constantly the fine, sharp dust of metals, from working unceasingly in constrained and unnatural postures; from constant contact of the hands and lips with poisonous substances; lastly the death which comes from prolonged exposure to inclement weather, from over-exertion and under-nutrition, from lack of sleep, from lack of recuperation swells beyond computation the unnumbered victims of a restless progress.

"It is, of course, inconceivable that the gigantic industrial movements of the American people should be conducted without some fatalities. The industrial structure is a huge machine, hard-running and with many unguarded parts and many of the fatalities, many of the deaths in general are simply and solely the result of conditions beyond human control and inseparable from the ordinary course of existence. But thousands upon thousands of easily preventable accidents and fatalities occur each year, and it is from these that we should strive to secure relief.

"In the State of New York alone last year approximately 300,000 wage earners were injured, 60,000 of them so seriously as to disable them from working for more than fourteen days; approximately 1,500 wage earners were killed or fatally injured in the course of their employment.

"The consummation of the movement for the disarmament of nations, the abolition of war, and the establishment of international peace requires the consent of all the great powers, whereas the abolition or the substantial diminution of the suffering caused by industrial accidents requires action only on the part of the people of our own country.

Prevention of Industrial Accidents.

"In the discussion of this vitally important question—the prevention of industrial accidents—we sometimes hear a voice saying, 'What have I to do with this matter? Am I my brother's keeper'? The answer is 'Yes.' Emphatically and unqualifiedly 'Yes.' No man is quite fit to live in a civilized society who is not concerned for the welfare and happiness of his less fortunate fellow-man. A great philosopher once said that a free man is one who lives in a country in which there are no slaves. Paraphrasing this statement, I contend that a really happy man is one who lives in a community in which there is no avoidable misery.

"It is to be regretted that here and there in the sacred name of patriotism, attempts have been made by selfish men to break down the labor standards which have been erected either by legislation or by trade union activity for the protection of wage earners. These attempts, thanks to the vigilance of the organized wage earners, and to the sympathetic support of other good men and women, have failed, and the necessity, even as a war measure, of maintaining the legislative safeguards for the protection of labor has been recognized and proclaimed by our great war President and by the war Governor of the Empire State. The President, in vetoing an Act of Congress increasing the hours of labor of government employees said:

"'At the outset of the war I felt it my duty to urge all employers in the United States to

make a special effort to see to it that the conditions of labor were in no respect altered unfavorably to the laborers. It has been evident from the first how directly the strain of this war is to bear upon those who do the labor which underlies the whole process of mobilizing the nation, and it seemed to me at the outset, as it seems to me now, that it is of the highest importance that the advantages which have been accorded labor before the war began should not be subtracted from or abated.'

"The Governor of New York, in vetoing an act of the Legislature which would have lowered the standards erected for the protection of labor, said:

Sound Views of New York's Governor.

"'We must not permit our people who are engaged in industrial pursuits to become apprehensive that the standards erected for their protection will be set aside; and we must not permit our industrial population to have cause to feel that the war's burdens and sacrifices may rest most heavily upon the shoulders of those least able to bear them. To give cause for such an impression would be a grave error. We must do nothing that would impair the confidence or weaken the loyalty of the service of those who are engaged in the fields and the factories. We should not disregard the errors of other nations with respect to the suspension of their labor laws; on the contrary, we should profit by their mistakes.'

"Perhaps no one phase of trade union policy has been the subject of more adverse criticism than has the demand of the workers for an eight hour day. Professional and business men, including manufacturers, fail to understand the logic of the workingman's demanding that his hours of labor shall be limited to eight each day while they themselves frequently work from ten to fourteen hours per day. Paradoxical as it may appear, one explanation is that the workingman earns more in eight hours than he does in ten, while the business and professional man earns more in ten hours than he does in eight. Every student of industrial affairs and everyone familiar with the rise and fall of wages will readily concede that wages have appreciated to a greater extent in those trades in which the eight-hour day has been established than in trades having a longer workday.

"The critics of trade unionism allege that a reduction in the hours of labor means more time and more money spent in drinking and dissipation. This assertion, reiterated incessantly, has been completely refuted by everyday experience and by the history of the labor movement. When the workingman comes from mine or mill, having taxed to the utmost his muscular and nervous energy, it is little wonder if he seeks a stimulus in alcohol or other crude pleasures. The unanimous testimony of all competent observers, teachers, ministers and sociologists, has been to the effect that a reduction in the hours of labor invariably means an improvement in the whole moral tone of the community, a raising of the standard of living, a growth of the self-respect of the workingman, and a diminution not an increase in drunkenness, violence and crime. If the American workman can be entrusted with the franchise, it is certainly safe to entrust him with a few hours of leisure time.

"If trade unionism had rendered no other service to humanity, it would have justified its existence by its efforts in behalf of working women and children. Unfortunately, society does not seem to feel itself capable of conducting its industries without the aid of its weaker members, and with each advance in production, with each increase in wealth and the capacity of producing wealth, women and children in ever larger numbers are drafted into service. In this development the woman, like the child, has been taken from her home and has been made subject to the tolling factory bell. The home, the natural and moral sphere of the woman, has been shattered by the invasion of the machine and the factory system. The burden of our civilization bears with heaviest weight upon the shoulders of women. Through constant association with it we have become hardened to the humiliating and degrading fact that in our society as at present constituted, hundreds of thousands if not millions of women and girls depending exclusively upon their own resources are compelled to work unduly long hours and for beggarly wages.

Protecting Women and Children.

"Were it not for the influence of trade unionism the work that women and girls are compelled to do would prove even more demoralizing than it is. The trade union seeks to protect the woman, morally, physically and industrially. It demands that she shall not be employed at night work or for very long hours; it demands and insists that women shall receive equal pay with men for equal work. In demanding equal pay and healthful surroundings for women the union not only protects the woman and the home, but it also protects the standard of living of all wage earners.

"Those who look only at the surface of things and judge trade unionism by an occasional glimpse are likely to underestimate the uplifting influence of this institution upon the character of the wage earner. Many who admit that trade unions have been successful in raising wages, shortening hours, and improving the material conditions of the worker's life, still believe that their effect upon his intellectual and moral tone has been either bad or entirely negative. To all, however, who do not view these matters superficially it must be evident that trade unionism has had exactly the opposite effect. The increased wages and shortened hours of labor have in themselves brought about a vast improvement in the mental and moral status of the workers. Workmen who formerly went from their twelve hours of work to the nearest saloon now spend their time with their families, improving their minds and enjoying a sensible and sane recreation. In most instances increased wages and shorter hours have meant the gratification of the intellectual and artistic sense of the workers, have meant books and pictures; have meant a few additional rooms in the house and more decent surroundings generally; have meant a few years' extra schooling for the children; have meant, finally, a general uplifting of the whole working class.

"Trade unionism distinctly raises the moral tone of the wage earners by infusing into them a sense of the dignity of labor. There is much lip service paid to the ennobling effect of labor and the dignity it confers upon the workman, but it is the trade union, more than any other institution, that translates these mere professions into actual deeds. The unionist feels that it is not the work itself but the spirit in which the work is accepted and performed that ennobles the worker. The principal element that gives to labor its dignity is its voluntary character. There was nothing ennobling about the toil of the slave, crouching beneath the lash; there was nothing ennobling in the work of the serf, bowed down by the weight of centuries; there is little of the dignity of labor in the forced work of the convict or of the man toiling under the padrone system; there is, indeed, little dignity and nothing ennobling in the work of any man whose earnings of today are absolutely necessary that he may live tomorrow. The greater the initiative and the more complete the independence of the worker, the greater the pleasure in his work and the more ennobling it becomes.

"The great new fact of American labor is its organization. The workingman has joined with his fellow workman and has obtained as a right, not as a privilege, higher wages, shorter hours, and better conditions of life and labor. Finally, through the trade agreement, he has secured the right to be consulted as to the conditions under which his work shall be performed.

What Trade-Unionism Has Done.

"In the pursuit of its ideals trade unionism has justified its existence by good works and high purposes. At one time viewed with suspicion by workman and employer alike, it has gained the affection of the one and the enlightened esteem of the other. Slowly and gradually it has progressed toward the fulfillment of its ideals. It has elevated the standard of living of the American workman and secured for him higher wages and more leisure. It has increased efficiency, diminished accidents; averted disease; kept the children at school; raised the moral tone of the factory, and improved the relations between employer and employed. In doing so it has stood upon the broad ground of justice and humanity. It has defended the weak against the strong, the exploited against the exploiter. It has stood for efficiency rather than cheapness, for the producer rather than production, for the man rather than the dollar. It has voiced the claims of the unborn as of the living and has stayed the hand of that ruthless, near-sighted profit seeking that would destroy future generations as men wantonly cut down forests. It has aided and educated the newly arrived immigrant, protected the toil of women and children, and fought the battles of the poor in attic, mine and sweatshop. It has conferred benefits, made sacrifices, and, unfortunately, committed errors. I do not conceal from myself that trade unionism has made its mistakes. No institution fully attains its ideal and men stumble and fall in their upward striving; but I submit to the judgment of every unselfish, impartial mind that the trade union, like every other institution, should be judged by the good it does, and I ask if there is a man so blind to the truth that he will not confess that the trade union movement has done much to elevate the men, women and children of labor and to protect the great mass of the people who are least able to protect themselves.

"The trade union movement is primarily and fundamentally a moral movement. While attention is attracted to it by its strikes and its struggles, yet the battles it fights in defense of the poor and the helpless are but phases of the greater movement that is making for the mental, the moral and the physical development of all our people."

Injunctions against the boycott, being powerless to compel patronage of unfair concerns, will always be futile as long as the spirit of fair play exists among men and women.

WHEN WILL THE WAR END?

The war will end when the democratic nations of the world have broken the back of Prussianism and German autocracy, and it can not end until then. When the armies of the free nations have trampled under foot the militarism of Germany the war will end. Germany must be whipped, and when we say that it means also, Austria-Hungary and the rest of the nations who are lined up with Germany. The fact is that these nations are even now no more than subject colonies of Germany with German influence in absolute control. Therefore, the whole structure composing the central powers must be broken down and not one stone left upon another.

The war will end when Germany has been compelled to make full and complete reparation for everything it has done to Belgium, to Poland, to Roumania, to Serbia and to all the other small nations that have fallen under its military hoof. Germany must make reparation to France for all the destruction and misery, and the suffering that it has spread throughout that land.

The German people—not the present government—must be brought to a position where they can and will guarantee the future peace of the world, and the war will not end until this is done. The present imperial German government has no place in this plan, because no people in the world now would be willing to accept or believe any promise it might make.

And the United States is going to bring this about. The United States is to be the deciding factor that will settle for all time the question of whether autocracy or democracy shall predominate throughout the world.

We entered this war fifteen months ago, and in that time gigantic things have been accomplished. We have raised, equipped and sent to France more than one million soldiers, trained and ready for service and supplied with everything they needed. Other millions will follow as fast as they can be transported.

When the American troops began landing in France, the ports were crowded and jammed, so that it was impossible to unload the transports without many days of delay. In one instance it is known that one American transport was compelled to remain outside a French harbor for nineteen days awaiting an opportunity to unload at a dock. This meant a loss of almost another round trip. But all of this has been changed. The Americans have built their own docks and wharves and their own warehouses. They have built hundreds of miles of double track railroad to transport these supplies from the ports to the troops in the field. They have taken 22,000 American freight cars and 1600 American locomotives from this country to run on the American railroads of France. Recent figures given out at Washington show that 45,000 Americans are employed on American railroads there. And this is but one feature of the wonderful achievements of Americans in the fifteen months that we have been in this war.

A nation that can do these things can do anything. It can break down the awful German military rule and make the world safe for democracy. That is exactly what America proposes to do, and when that is done, the war will end.—United Mine Workers' Journal.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Value of Publicity Known to Packers.

That meat packers appreciate the value of publicity is shown by the quick manner Swift & Company issued a thirty-page pamphlet in which denial is made of the federal trade commission's claim that the packers have stifled competition and attempted to block investigation by the government.

The commission stated that the interests of the "big five" packers—Swift, Wilson, and that they control subsidiaries interested and that they control subsidaries interested in public service, land development, stock yards, cattle loans, rendering, cotton oil, publications, terminal facilities, banks, packers' machinery and supplies, cold storage and ware houses, slaughtering, railroads and canning.

The packers are charged with being conspirators and the commission says its investigators have been met by schools for witnesses where packers' employes were coached, letters were destroyed and returns demanded under the law falsified.

"Some show of competition is staged by the five great packers," it is stated, "but that is superficial and unreal."

Swift & Company enters a general denial of these charges, and the commission is blamed for resorting to "sensational methods," "adroit construction" and omitting "scores of salient facts."

It is evident that the commission's report hurts, and Swift & Company, who conduct a large newspaper campaign throughout the country, print extracts from many newspapers condemning the commission's attitude toward the packers, who assure the public they are tremendously injured.

All of which is undoubtedly true.

Women on Iron Work is Paying Project.

The National Industrial Conference Board has been investigating the question of women in metal trades and finds that employers, as a rule, favor this plan from the standpoint of economy and do not consider the question in its broader significance.

The board represents seventeen organizations of employers, including such units as the National Association of Manufacturers, National Founders' Association, and the National Council for Industrial Defense.

The board says that the opinion of manufacturers is chiefly related to their factory experience. "Further evidence," says the board, "that the question was seldom considered in its broader significance is furnished by the fact that forty-four employers replied merely 'yes' to the question regarding the desirability of the wider introduction of women, without further comment or discussion."

An exception to this rule was noted in the case of a firm employing 205 women.

"The future of the race depends absolutely upon the moral strength of the women and if the employer of labor is not of the calibre that builds this moral strength, there is great danger in the employment of women."

The board refers to this declaration as "a very conservative attitude."

One employer of 500 women reports that women "are more open in accepting prices for piece work," and the board finds that although women workers talk more about what is unsatisfactory to them, "the maintenance of permanent organizations by women has been exceptional."

Anti-Union Employers Must Change Tactics.

In his new book, "The Russian Upheaval," Prof. Edward A. Ross, former president of the American Sociological Society, makes this suggestion to anti-union employers:

"The labor-fighting, labor-crushing policies which many employers' associations delight in are an anachronism, and those who persist in them should be tolerated about as long as smokers are tolerated in a powder factory. The normal means by which workers protect themselves from exploitation is collective bargaining, which presupposes the union.

"In the production of resentment it makes very little difference whether the working men are deprived of the right to organize by the government of a Czar or by employers' associations. The economic effect is the same.

"The ruthless 'hire and fire' practices of American industry should be replaced by decent methods considerate of the interests and feelings of the employes. Co-operation should be welcomed as the natural and reasonable thing. All the aspects of a business which concern labor should be considered and settled by joint boards in which employer and employe have equal representation. Means should be employed which will give wage earners an interest in the prosperity of the concern. Only by some such right-about-face on the part of American capitalists will it be possible to avert a calamitous class strife which will shatter the foundations of our national prosperity."

Low Wage for Miners Reducing Man Power.

At a meeting of officers of the United Mine Workers of America, district presidents and secretaries, Fuel Administrator Garfield refused the request of these workers for wage increases, and said that if the miners and coal operators agreed on wage increases he would veto it.

The miners then prepared a statement of their position and forwarded same to the fuel administrator.

"Again and again," say the miners, "we will come to you on behalf of the miners."

Present mining conditions have been intensified by the fuel administrator's abolition of the bonus system. The miners are not favorable to this system, but they show that their wages have been reduced, the cost of living has steadily increased, and "the prices of shoes, food, clothing, rent, etc., have gone higher and higher to a degree unforseen and unexpected when the present agreement was consummated." In the anthracite region, especially, thousands are not getting a wage sufficient to guarantee a decent living, it is stated.

The anthracite district has lost 30,000 miners through the draft, enlistments and by inducements offered in other industries.

"Shall the present inefficient force be further depleted?" the miners ask. "The mine

World's Workers

Thirty-six per cent. of the employes of the Government of Great Britain, outside the munition factories, in January, 1918, were women, according to an announcement by the Department of Labor. It is estimated that in all lines of work 1,442,000 women have stepped in to fill the depleted ranks of industry, and nearly three-quarters of this number work for the Government.

Women street-car conductors in London, England, refused recently to take out their cars until they had been granted a 5 shilling a week bonus which had been given the men but not the women. The women secured the active support of the men conductors and drivers, who struck in sympathy. As a result of the tie-up, many munition workers and business men were unable to reach their places of employment.

Arthur Henderson, Charles W. Bowerman, secretary of the British Trade Union Congress, and other members of the House of Commons recently applied for passports to Switzerland for a conference there with Pieter Troelstra, the Dutch Socialist leader, regarding letters received from Socialists in enemy countries. The war cabinet, after discussing the request, decided that it was inadvisable to grant passports enabling persons in Great Britain to meet persons abroad who have passed through enemy countries. The Parliamentary Committee of the Trade Union Congress and the executive of the Labor party debated this refusal and passed a strong resolution of protest.

It is becoming more and more difficult to obtain clothing in Belgium, according to the Belgian Bulletin, received by the Department of Labor, which says that persons who have been thrown out of work may secure on easy terms, once a year from the charity clothing club, a dress or an overcoat. A Belgian, interned in Holland, obtained permission to wear civilian dress. His wife, who had remained at Verviers, joined him, and he wrote recently: "My wife has come with my personal effects. However, before she left, a number of persons came to her and offered her for my Sunday suit and overcoat 500 francs ($100); for a pair of velvet trousers, which cost 7 francs ($1.40) before the war, 40 francs ($8); for my shoes, 250 francs ($50); etc."

Germany will have a serious labor problem in the days to follow the war, according to information which has reached the United States Department of Labor. Latest reports indicate that the number of unions has declined from 771 to 450 since 1913, and that the membership of the Berlin Central Labor Union has fallen from 302,000 to 130,000 in the same time. Hamburg's 130,000 trade-union members in 1913 have been reduced to 47,000 now, and Dresden's membership of 96,000 has been cut in half. The great wastage of German man power in the war not only means a future danger but has led to widespread troubles in Belgium which, according to Lieut. Henry De Man, of the Belgian Army, who spoke before the Boston Central Labor Union, caused the greatest labor strike in the world. More than 1,000,000 organized laborers of Belgium, he said, refused to do any work for the Germans.

Pacific Coast Marine.

Concessions have been made by the Government in the interest of having foreign vessels carry fish from Alaska to coast ports.

It is estimated that it will cost half a million dollars to repair the Osaka Shosen Kaisha steamship "Canada Maru," which came so near destruction on the Cape Flattery rocks.

Eighteen of the forty wooden vessels built and building by the Foundation Company at Portland and Tacoma have been chartered by the Thorndyke-Trenholme Co., managing agents of the French owners, to various concerns.

The Monticello Steamship Company has purchased the twin-screw steel steamer "Asbury Park" at a reputed cost of $200,000 to add to its fleet of San Francisco-Vallejo vessels. The ship will be brought from New York at once through the Panama Canal. It will be the largest and fastest steamer on the bay.

Representatives of the Emergency Fleet Corporation to promote good relations between workers and employers in shipbuilding districts were announced during the week. They include: H. A. Brotherton, of San Francisco, for California yards, and Henry W. McBride, ex-Governor of Washington State, for all Washington yards.

The first unit of the new five-unit dry dock built at Port Blakeley for the Skinner & Eddy Corporation has been delivered at that plant. The unit is 90 by 125 feet. The completed dock, with its five units, will be 400 feet long by 15 wide. It will be capable of lifting 17,000 deadweight tons. The fifth unit is expected to be delivered in November.

The Pope Shipbuilding Corporation, Los Angeles, has been incorporated with a capital of $1,000,000 to construct and operate a plant near Newport Beach. It is negotiating a lease covering about thirty acres of waterfront property, and plans to build both steel and wood vessels. E. D. S. Pope, Frank Scoville and William M. Loftus, Los Angeles, are the incorporators.

A new departure in Seattle shipbuilding activities was the completion recently of a 500-ton concrete scow by the Inter-Ocean Barge & Transportation Company. The craft has been chartered to the Border Line Transportation Company, for service between Seattle and British Columbia ports. Returning from her maiden trip, she carried 1060 measurement tons of box shooks.

C. F. Alexander, president of the Pacific Steamship Company, has been notified that he has been named by the American Steamship Association to serve on a special committee named by that organization to prepare views on the possible means of utilizing and operating the 3000 steamers which will be at the disposal of the Shipping Board at the conclusion of the war. Alexander has accepted the appointment.

Eleven new lights were established in Alaska by the Bureau of Lighthouses since June 30, 1917, according to an announcement by Secretary Redfield. Three lights were changed from fixed to flashing, and one gas buoy, twelve buoys of other types, and five beacons were established. Before the present season is over sixteen additional new lights will be established, as well as two new gas and bell buoys and an unlighted daymark.

Close to 6000 employes of the Mare Island (Cal.) Navy Yard participated in a big celebration on September 4 in honor of the completion of the champion destroyer "Ward." The parade started at 8:30 o'clock. Lieutenant W. T. McNiff, U. S N., was grand marshal. Speeches were made by the naval officers and by local city officials. A street dance was held later. The "Ward" was completed in 108 days, the fastest built man-of-war in the world.

The job of floating the steamer "Afghan Prince," ashore on Gabarus Shoal, Cape Breton, has been given to the Maritime Wrecking & Salvage Co. of Halifax. Superintendent Reid is now at the scene of operations. If the weather continues good Captain Reid has good hopes of floating the big freighter. A quantity of tobacco and alcohol from the ship's cargo has been landed at Louisburg by naval patrol boats and shipped to the Furness-Withy agency at Sydney.

The timber scaled in British Columbia during the first six months of 1918 totaled 772,446,607 feet. In 1917 the scale reached 662,407,441 feet for the first six months, compared with a total of 509,383,498 feet of the same period of 1916. This is an increase over 1916 of over 50 per cent. Considering the scarcity of skilled woods labor this showing is a remarkable showing. The lumber cut for the province in 1917 was approximately 1,600,000,000 feet.

Wooden ship builders of Portland have organized the Oregon Wood Ship Builders' Association, for the purpose of restoring the merchant marine of the country and to promote the wooden ship industry in the Northwest. Officers elected were: President, F. C. Knapp, Peninsula Shipbuilding Company, Portland; vice-president, E. W. Wright, McEachern Shipbuilding Company, Astoria; secretary, George E. Low, Supple-Ballin Company, Portland; treasurer, Erick V. Hauser, Grant Smith-Porter Ship Company, Portland.

Another 12,000-ton steel freighter will be launched at the Alameda (Cal.) plant of the Bethlehem Shipbuilding Corporation about the middle of September. The exact date for the launching has not been set, though efforts will be made to have the event take place Sunday, September 15. Kirby S. Heckt, harbor engineer for the city of Oakland, is preparing an exhibit for the land show, which will show in detail Oakland's big water front from the tidal canal down the estuary and around the Key Route basin to Emeryville.

During the month of August twenty-four vessels and two rafts laden with lumber and logs from the Lower Columbia River plants sailed for California, and their combined cargoes amounted to 29,050,000 feet. Two vessels carrying 1,747,926 feet sailed for foreign ports. In the same period seven vessels loaded 3,358,256 feet at the upriver plants, making a grand total of 34,156,182 feet of lumber and logs which left the Columbia River in cargoes and rafts during August. In addition to this, 583,358 shingles were shipped from Astoria to Honolulu.

Captain Donald S. Ames, assistant inspector of hulls and boilers at San Francisco, has been appointed local inspector of hulls and boilers for the port of Seattle, to succeed Captain William Fisher, who has been appointed supervising inspector of the Eleventh District, which comprises Washington and Alaska, according to a communication by Captain John K. Bulger, supervising inspector for the First District. Captain Bulger has recommended that Fred W. Richardson, assistant local inspector of hulls and boilers at Boston, be transferred to San Francisco to succeed Captain Ames, and has recommended that Captain T. J. Sullivan, assistant local inspector of hulls and boilers at New Orleans, be transferred to San Francisco to succeed Captain Arthur P. Gilbert, who was commissioned Lieutenant Commander in the naval auxiliary.

Eight salmon canning companies in British Columbia have consolidated under the name of the Northern B. C. Fisheries, Limited, capitalized at $2,000,000. The concerns that have been merged are the Draney Fisheries, Limited, Namu; Kimsquit Fisheries, Limited, Kimsquit; Tallheo Fisheries, Limited, Bella Coola; Skeena River Commercial Company, Limited, Port Essington; Port Edward Fisheries, Limited, Port Edward; Kincolith Fisheries, Limited, Mill Bay; Portland Fisheries, Limited, Kumeon; the Namu Box Company, Namu. The purpose of this amalgamation is primarily to stabilize the earnings of the various companies involved. It frequently happens that a cannery at one spot has a very lean season, and a cannery at another spot equally strategically situated has a very profitable season. By those interested in the constituent companies pooling their interests they are reasonably assured of constant dividends, provided a poor season does not obtain throughout the entire northern district.

As a means of relieving the pressure upon Eastern coal, the United States Fuel Administration has arranged a test of State of Washington coal in Chilean industrial plants. Trial cargoes were recently shipped from Puget Sound to Chile. The coal cargoes were accompanied by fuel experts who will conduct the experiments. Hertofore the coal for Chile has been taken from the mines of West Virginia, Pennsylvania, and Maryland, which mines are now carrying the heaviest burden in producing coal for Government uses. It is estimated they are 14,000,000 tons behind the production required from them to meet the war demands. To remedy the shortage of coal in Argentina, shipments are now being made from South Africa. The prejudice against South African coal in Argentina, caused by the poor quality of shipments sent a few years ago, has now been overcome and South African coal shippers hope soon to obtain a contract for the Argentine Navy, though, as yet, freight rates to and from American ports, when transports are available, operate against shipping centers in the Cape Province and Natal.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE

One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter.

Headquarters of the Sailors' Union of the Pacific, 59 Clay Street, San Francisco.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, SEPTEMBER 11, 1918.

SUCCESS TO THE CHIEF!

Mr. John H. Rosseter, recently appointed Director of Operations of the U. S. Emergency Fleet Corporation, left his home town, San Francisco, during the past week for Washington, D. C., to tackle one of the biggest jobs ever assigned to a mere man.

In brief, Mr. Rosseter's job is to make it possible for our great new merchant fleet to continue in full operation when peace has finally been declared and when the great maritime nations of the world will resume the old struggle for commercial supremacy upon the seas.

Before leaving Mr. Rosseter made it perfectly clear that he is not in sympathy with the minority group of Americans who have always maintained that success in ocean-carrying competition can be had only by employing "cheap" labor.

In an address at a banquet tendered in his honor by the San Francisco Chamber of Commerce, and again in an informal talk before the Waterfront Workers' Federation of San Francisco, Mr. Rosseter laid emphasis upon the fact that he would not, if it were in his power to do so, lower the wage or the prevailing standard of living of American seamen. In addition, the new Director of Operations left no doubt regarding his attitude toward Chinese crews. He told the merchants in the Palace Hotel and the workers in the Labor Temple exactly the same story. He is opposed to the employment of Chinese seamen on American ships and confidently believes that competitive odds in this respect can be met and overcome by American system and efficiency.

Mr. Rosseter believes our greatest competitors will be Great Britain, Japan, and the Scandinavian countries. His general attitude is that it will doubtless require much hard work (principally "pull together work") to meet and solve this tremendous task before the American people, but he is full of real optimism as to ultimate results. He thinks it can be done. And his whole life's work in the shipping business should be a guarantee that he is "the man" to do it.

In the performance of his duty Mr. Rosseter will have the loyal, hearty and active co-operation of the organized American seamen. Whatever can be done by the International Seamen's Union of America to restore the Stars and Stripes to its rightful place will be gladly and willingly done. And it will be a genuine pleasure to work toward the goal with such a man as Mr. Rosseter.

American ships—manned by American crews—visiting all the ports of the world and sailing every corner of the seven seas employed in profitable trade, that is the common goal. Is it not worth striving for by us all? Is it not, next to winning the war, a great and splendid object for all Americans?

Yes, indeed, it is an aim worthy of a great nation. It is a task in which red-blooded men can enthuse. And, finally, it is work that "must" be done—for the future welfare of our Republic demands it!

Here's success to Jack Rosseter, the San Francisco boy, who has been called upon to do it.

TRAINING MERCHANT SEAMEN.

The Shipping Board, through Edward N. Hurley, Chairman, has authorized the commissioning of a training-ship on the Great Lakes, for the training of apprentices as seamen, firemen and cooks on Lake cargo carriers. The ship will be based at the station to be established at Cleveland, under the direction of Captain Irving L. Evans, of Cleveland, Section Chief of the Board's recruiting service for the Lakes.

This service, of which Henry Howard, of Boston, is director, is now training 3,000 men a month for the new merchant marine, on a fleet of training vessels maintained in Atlantic and Pacific waters. The Lakes vessel will be the thirteenth in the Board's training fleet.

The training of men by the Government for service on the Great Lakes is a novelty. It was ordered by the Shipping Board, through Chairman Hurley, as one means of meeting demands of the organized sailors, firemen, oilers and watertenders who had voted to strike for patriotic reasons in order to compel the Steel Trust-controlled Lake Carriers' Association to co-operate with the Government.

Recruiting of apprentices for the Great Lakes training ship will be carried on in the same recruiting stations of the Board that are now providing large numbers of young men for coastwise and overseas ships. The Board has nearly 2,000 of these stations in the seven Stations touching the Lakes.

It is certainly a most gratifying record that there has been splendid and close co-operation between the International Seamen's Union of America and the U. S. Shipping Board's Recruiting Service from the very outset.

Conferences have been held from time to time and the threshing out of many problems has always cleared the way for a still better working arrangement between the Recruiting Service and the various District Unions.

The issuance of the historic Call to the Sea by the organized seamen has helped materially to bring about desired results.

That young America is fully alive to the "Call of the Sea" is forcibly demonstrated by a jump of more than 50 per cent. in recruiting for the merchant marine during one week. The latest weekly report from the recruiting service of the Board shows that in the seven days following the announcement of the acceptance of men for the merchant service outside the former draft age, the number of apprentices on the Shipping Board's training ships rose from 3,125 to 4,846. The training station at Seattle, which has two cruising ships, showed a phenomenal gain. The San Francisco station, which has only one recruiting ship, showed an increase from 561 to 681. Boston, base of the Atlantic training squadron, which has three crusing ships, showed an increase from 2,178 men to 2,366.

STOPPING THE ENGINES.

The British Board of Trade has issued a notice to shipowners pointing out the importance of being able to stop engines of a vessel when a casualty has occurred. The notice calls attention to the fact that cases have occurred, when vessels had been torpedoed and in immediate danger of sinking, in which, either through an escape of steam in the engine- and boiler-rooms or through the flooding of the engine-room, it has been impossible to stop the engines. As a result there has been needless loss of life because, owing to the speed with which the vessel was moving through the water, the ship's boats could not be launched or, if launched, were capsized on reaching the water. It is pointed out, therefore, that means be provided in all steamships of stopping the engines from the deck or the engine-room skylight hatchway. The Board of Trade suggests that this can be done readily in any of the following ways:

1, By connecting a wire rope to the throttle valve lever (or lever on the governor spindle in some cases) and leading it to a point in or near the engine-room skylight hatchway, from which position the lever can be operated and the throttle valve shut, the rope normally being slack to admit of the free movement of the lever in maneuvering the engines;

2, By a simple arrangement of rods and wheel connected to the engine stop valve of each main engine for shutting this valve from the position described in (1); or

3, Where there are few boilers, by fitting rods from the boiler stop valves to the top of the boiler casing, with suitable hand wheels for closing those valves from that position.

The Board of Trade strongly urges that one of the above means of stopping the engines be provided at the earliest opportunity. Care should be taken that the arrangement is such as not to interfere with the necessary maneuvering of the engines as may at any time be required at sea. The gear should be well tried after being fitted, in order to see that it fulfils its purpose effectively; and, if hand wheels are used for closing the valves, they should be so marked as to show how the valves are opened and shut.

Cases have also occurred where a ship has been torpedoed or mined at the forward end, and, in consequence, has trimmed so deeply by the head that the propeller or propellers have been almost clear of the water and have continued revolving while the boats were being launched. This has in some cases caused the destruction of some of the boats with loss of life. Before the engine-room is abandoned in such cases, it is important that the steam be entirely shut off the engines, the circulating and air pumps stopped (if separate from the main engines), and every effort

made to destroy the vacuum in the condensers, and thus to prevent, as far as possible, any further movement of the propellers. A simple and inexpensive device for destroying the vacuum would be an air inlet cock or valve on the condenser which might be made to be operated from below and from the same position as the emergency steam controlling gear.

THE FOURTH LIBERTY LOAN.

The campaign for the Fourth Liberty Loan will begin September 28 and close October 19. The result of the loan will be watched with keen interest in Europe, not only by our associates in the war against the Teutonic powers but by our enemies. It will be regarded by them as a measure of the American people's support of the war.

The Germans know full well the tremendous weight and significance of popular support of the war, of the people at home backing up the Army in the field. As the loan succeeds our enemies will sorrow; as it falls short they will rejoice. Every dollar subscribed will help and encourage the American soldiers and hurt and depress the enemies of America.

The loan will be a test of the loyalty and willingness of the people of the United States to make sacrifices compared with the willingness of our soldiers to do their part. There must be and will be no failure by the people to measure up to the courage and devotion of our men in Europe. Many of them have given up their lives; shall we at home withhold our money? Shall we spare our dollars while they spare not their very lives?

An idea of the work of the entente allied navies in European waters is shown by figures on the part taken by American destroyers from one base in April, May and June of this year. These destroyers, which form only a part of America's fleet in European waters, escorted 121 troopship convoys, consisting of 773 ships, in that period. During the same time they escorted 171 merchant convoys, consisting of 1763 ships. When it is considered that the American Navy in that period did only 27 per cent. of the convoying and that the figures represent only the work of destroyers at one base, it may be seen what a tremendous task is being performed by the allied navies. There are at present 155 ships flying the British flag carrying American troops exclusively. In August more than 250,000 American troops arrived in Europe. Of this number the American Navy convoyed 34, the British navy 65 and the French 1 per cent. Permission to publish the foregoing facts and figures has just been received.

Seamen between the ages of 18 and 45 should bear in mind that Thursday, September 12, is National Registration Day. All, including natives, naturalized citizens and aliens, are required to register. Seamen arriving in port after this date must register upon arrival. If in doubt regarding your duties in this respect call at the office of your Union and secure reliable information.

You can't teach a "new" trade unionist old tricks. He insists upon learning in his own way and at the cost of his own bumps.

Become a stockholder in the United States—buy war-savings stamps.

THE PROPS OF AUTOCRACY.

Professor Jordan Excoriates "Kultur" and says "Every German Privilege Rests on Royal Favor."

"Every German privilege rests on royal favor, and by royal veto it can at any time be taken away," says Professor David Starr Jordan, of Leland Stanford University, California, in "A Letter to Americans of German Origin," which is published in The Public.

The writer says he has not a single German ancestor, but he has given lectures in Germany in behalf of democracy, "and in what I thought and hoped was the German language."

"This experience showed me," he says, "that the spirit of '48 was still alive in Southern Germany, at least, and ready to burst forth when the time should come.

"The tireless researches of German science," he continues, "and patient docility of German society have given the theory and practice of absolutism, or 'monarchical order,' a hold it never had in England or in France.

"But no German-American can have any real love for the Prussian dynastic machinery. He may feel a deep personal sympathy for his cousins who are forced to suffer or die to support it. Such sympathy is most natural and honorable. But the need for it is part of the tragedy itself. Those friends of his have fallen at the dictate of absolutism and for the maintenance of an unscrupulous dynasty.

"This war once started has gained in motive as well as in momentum. Its final end must rid the world of the menace of aggressive dynastic militarism.

"The Prussians have killed war. They have made it too wicked for human comprehension. They have set aside all other gods to worship at the shrine of military necessity.

"Let us consider certain definite facts: Prussia has virtually swallowed the rest of Germany. Austria has become her vassal, Turkey her hired tool and Bulgaria a more or less unwilling accomplice. Prussia is organized as no other State has ever been before for repression at home and aggression abroad. Prussia knows no right or wrong. She is at the mercy of an aristocratic-military-plutocratic clique, of which the Kaiser is at once the agent and the victim. He is the leader only when he leads along the way they have marked out for him.

"This clique brought on the war. The authors of the Serbian ultimatum were in the plot and the deed was consummated in the hurricane of lies. One of the most absurd of these fables was that the war was the work of King Edward VII (of England), through whose machinations innocent Germany has been surrounded by a ring of iron. The real truth, as you know, is that Germany, since 1871, has been organized as a war machine, and the mind of the nation has been perverted and poisoned by cheap visions of military glory, with a golden shower of indemnities to boot.

"The system of subservience known as kultur pointed directly towards expansion by conquest. Kultur, or monarchial order, is a system of discipline enforced from above. It means complete military as well as industrial regimentation, and complete subordination of the individual to the dynasty and the State. It is ruinous to individual development, destructive to initiative, and it plays into the hands of the privileged classes generally, whose serfs are the people. To these, relative security without hope is granted in place of freedom and initiative.

"There never was an autocratic court which was not corrupt to the core. There could never be one, for its very essence consists in exercising a power the people never delegated, by men they have never commissioned. Under such a rule, in the different States of Germany, the mases have no rights. Every privilege rests on royal favor and by royal veto it can at any time be taken away.

"Moreover, the watchword of 'monarchial order' is perfection. Every institution, army, church, school, university, society is perfect from the start. 'The State can do no wrong.' It is thus immune from crimes or blunders. Perfection, however, is the perpetual enemy of progress. The perfect State is stalled in the bogs of the Middle Ages. Democracy means progress, and no real progress is possible until the obsession of perfection is dissipated.

"Democracy knows nothing of perfection. It has no finished products. It is a 'going concern,' deserving better things because ever moving towards them. Democracy does not mean good government—only better government. It is the gateway to freedom and justice, the gateway only—but there is no other. And justice means the control of one's own career, the opportunity to make the most of life for oneself and for society. The ideal of autocracy, or of the State-worship which it uses as a blind, is the opposite of this. A man, they say, is but 'a brick in the wall of an edifice, he does not see and cannot understand.'

"The waste of talent under the German system is as notable as the high specialization of the chosen few.

"'To be a soldier, pay taxes and keep his

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Sept. 3, 1918.
Regular weekly meeting came to order at 7 p. m., Frank Johnson presiding. Secretary reported shipping good.

Headquarters, San Francisco, Cal., Sept. 10, 1918.
Monday, Sept. 9, being Admission Day, the regular weekly meeting was therefore postponed to Tuesday, Sept. 10. A synopsis of the minutes of the said meeting will be published in next week's isue.

JOHN H. TENNISON,

Grand Trunk Dock, Room 203. Phone Main 2233. P. O. Box 214.

According to advices received from Honolulu, the United States Shipping Board has decided to carry the sugar crop to the mainland in steel ships and utilize wooden ships for the transportation of the pineapple crop. It is estimated that there will be about 100,000 tons of canned pines, and as all of the wooden ships are small carriers it will require a considerable fleet to bring the pines across. It is announced that 600,000 cases of these pines have been taken over by the Government for military use. All of the crop will have to be moved within five months, but from present indications it is expected that this will be accomplished. The island interests have agreed that all of the steel ships are to be given full cargoes of sugar, and that there will be no delay in the loading. If necessary, huge fleets of lighters will have to be employed at Hilo and other places, where the loading is done offshore. Recently a Danish motorship arrived at a Pacific port with 8000 tons of sugar.

Captain A. F. Pillsbury, district superintendent of the Emergency Fleet Corporation at San Francisco, announced that there would be no more multiple launchings at the local shipyards in the future. Each vessel will be launched as soon as it is ready to take to the water and the keel of another laid. It has been learned that there is a waste of time and efficiency when several vessels are launched simultaneously, and in order to keep a yard going with efficiency, the multiple scheme has been done away with. The new method will not be so spectacular, but the results will be better.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

To-day's biggest piece of news, in the labor world, is the order issued by Director General McAdoo to all officers and employes in the Railroad Service of the United States, that they are removed from further active participation in politics. Two million men are notified that henceforth they are neither to run for office—except for local school or park boards—or to manage the campaign of others, nor take part in any political convention, nor belong to any political committee, or solicit or receive funds, or contribute to funds collected by anyone in the Railroad Service, for any political purpose.

The order deprives the 2,000,000 railroad workers, as well as the railroad lawyers, of these particular political rights of ordinary citizens, because, in the words of the Director General, "Under Government control there is no inducement to officers and employes to engage in politics. On the contrary, they owe a high duty to the public scrupulously to abstain therefrom." And also "This policy is intended to secure to all of them (officers, attorneys and employes) freedom of action in the exercise of their individual rights, and, at the same time, to prevent any form of hurtful or pernicious political activity."

The same rule, substantially, was imposed by the Civil Service Act, many years ago, upon all persons in the Federal civil service. At that time the country had been scandalized by the manner in which the political gangs in Philadelphia had forced the Government employes to contribute regularly to the Republican campaign fund, collected in Government buildings by Government employes. There were in the entire country only 200,000 to 300,000 persons in the Federal civil service, and public opinion was in hearty sympathy with the act of Congress which denied to this small body of public employes the right to take part in organized politics, or to run for political office.

As the number of civil servants has increased, however, the question of safeguarding the political rights of these men and women has come up again. The taking of the railroads by the Government as a war measure was the signal for new debate on the matter, and it was generally felt that no administration would attempt to put the railroad employes under civil service restrictions; on the contrary, the employes themselves were confident, and the public seemed to understand, that the 2,000,000 men in railroad work would be active in politics both for their own interests as wage-workers and for the cause of permanent public ownership of the railroads.

"The approaching Federal and State elections," the Director General says, "including the primary contests connected therewith, make it both timely and necessary that the attitude of the Director General towards political activity on the part of officers and employes in the railroad service should be clearly stated.

"It was a matter of common report that railroads under private control were frequently used for partisan political purposes; that railroad corporations were frequently adjuncts of political machines, and that even sovereign States had been at times dominated by them. Contributions to campaign funds and the skillful and effective coercion of employes were some of the means by which it was believed that many railroads exerted their power and influence in politics. Scandals resulted from such practices, the public interest was prejudiced, and hostility to railroad management was engendered.

"Now that the Government controls and operates the railroads, there is no selfish or private interest to serve, and the incentive to political activity on the part of the railroads no longer exists.

"It is therefore announced as a definite policy of the United States Railroad Administration that no officer, attorney, or employe shall

"1. Hold a position as a member or officer of any political committee or organization that solicits funds for political purposes.

"2. Be a delegate to or chairman or officer of any political convention.

"3. Solicit or receive funds for any political purpose or contribute to any political fund collected by an official or employe of any railroad or any official or employe of the United States or of any State.

"4. Assume the conduct of any political campaign.

"5. Attempt to coerce or intimidate another officer or employe in the exercise of his right of suffrage. Violation of this will result in immediate dismissal from the service.

"6. Become a candidate for any political office. Membership on a local school or park board will not be construed as a political office. Those desiring to run for political office or to manage a political campaign must immediately sever their connection with the United States Railroad Service.

"I am sure that I can count on the loyal co-operation of all officers, attorneys and employes engaged in the operation of the railroads under Federal control, to carry out in letter and spirit the policy here announced. . . . Let us demonstrate to the American people that under Federal control, railroad officers, attorneys and employes cannot be made a part of any political machine nor be used for any organized partisan or selfish purpose.

"Let us set such a high standard of public duty and service that it will be worthy of general emulation."

To this argument there are some officials of the railroad brotherhoods and the organized shopmen who enter a most respectful but firm reply that the Director General has made a mistake; they say that there are a large number of their men already nominated, or running in the primaries, for Congress and for State legislative positions, and that these men cannot be deprived of the rights enjoyed, for example, by dollar-a-year or salaried men in the Food Administration, the Fuel Administration or the Shipping Board. At least, they feel sure that Mr. McAdoo, upon further consideration, will modify his order so as not to bring any actual discrimination against one group of workers.

Every one understands why the order was issued. Political opponents of Mr. McAdoo have charged that he was going to make the Railroad Administration a huge political army for the winning of the Presidential campaign in 1920, and he wants to discredit that story. At the same time he is understood to be most anxious that the political power used in the past and still secretly used by large numbers of railroad officials, in behalf of corporate interests, and against public ownership or operation of the railroads, shall be destroyed.

All the trade union leaders agree with him on these points. They point out, however, that by denying to all railroad employes, as well as to railroad lawyers and officials, the right to engage in politics, he is simply wiping out the biggest political support of public ownership, while he does not for a moment stop the corporate interests from putting up their own tools for election to Congress or to State offices. Most of the corporation lawyers will serve them in that way.

Since the order is issued, the unions of railroad employes will have to do what the postal employes have done—select political candidates from among their salaried union officials. Representative Van Dyke of Minnesota, for example, was separated from the railway mail service before he came to Congress. There have been dozens of ex-postmasters in the House in recent years, of course, although these have not represented postal employes' unions.

But this railroad order raises a bigger question: Will the Postmaster General order that the army of half a million telephone and telegraph employes obey the same rule? And will orders be issued, presently, covering in the same way the war workers in Government plants? If this is to be the case, then a very large part of the organized labor of the United States, and a very small part of the political lawyers and heelers in the country, will be deprived of the right to run for office or to take part in campaign activities.

Possibly some compromise will be reached, whereby political candidates and campaign managers may be given leave of absence without pay for a period of months, but may return to the service without loss of seniority rights.

* * *

At the moment when the 60,000 workers in sixty-six war industries plants in Bridgeport were preparing to nominate and elect their shop committees and their local board of industrial appeals, as provided in the plan of industrial democracy laid down in the award that was rendered last week by Otto M. Eidlitz, referee for the War Labor Board, some 3000 machinists have gone on strike. If the strike continues, most of the plants will be tied up. Local as well as international officers of the Machinists' Union have tried in vain to stop the strike movement. The local business agent, who begged the men to stay at work, was dismissed. The grievance is the failure of the award to give the men the four wage classifications they wanted. It establishes a sliding scale of wage increases based on open shop wages that have hitherto prevailed. Men getting 40 cents an hour will get 46 cents; men who got 41 cents will get 47 cents, and so on. Those who got 75 to 77 cents will get 78 cents an hour. The men refuse to continue to be paid by this method.

Yet the award provides a sure and reasonably prompt method by which they could secure the change to four wage rates without any stoppage of production. In every shop the workers were to elect a committee, and also to nominate delegates

to a general convention of Bridgeport war industries. This convention is to name candidates to be voted upon at a general industrial election for the Bridgeport war workers. This election will be held in booths in school houses. Three workers will be elected, to sit on the permanent board of local appeals. Before this board, which will include three employers and a chairman chosen by the Secretary of War and representing the Government, all disputes not settled between the shop committees and the shop management will be heard. Under certain conditions an appeal may be taken from the local board to the National War Labor Board. Besides shop committees and the local board, the workers will have a general committee made up of all the sixty-six shop committees, which will act as the central labor legislature for Bridgeport war industries. With this machinery at hand, the strike seems to War Labor Board officials to be particularly unfortunate.

AN ANALYSIS OF PENSIONS.

An interesting analysis of the situation as regards employes' pensions is given by John A. Fitch, of the Survey staff, in a recent issue of that paper. To stop the excessive turnover among employes, and to hold their good will, many big firms have instituted systems of pensions, based upon various conditions, and worked out in various ways. Some, like the United States Steel Corporation, have provided that the monthly pension is to equal 1 per cent. of the average regular monthly pay received during the last ten years of service, multiplied by the years of service. Thus, "an employe who has been 25 years in the service and has received an average regular monthly pay of $60 a month will receive a pension allowance of 25 per cent. of $60, or $15 a month." This plan is common among the larger railroads, and with slight modifications is used by a number of corporations.

A more ambitious plan is that of Sears, Roebuck & Co., the Chicago mail-order house. This requires a payment on the part of the employe who wishes to participate into an employes' saving and profit sharing fund, to which the company agrees to add each year a sum equal to 5 per cent. of its net earnings. It had been estimated that the company would pay into the fund $1.91 for each dollar paid by the employe. Instead, the profits have warranted the payment of $3.09 for every dollar paid by the employes. Thus, the employe who began paying into the fund $12.50 a month in July, 1916, when the plan was started, had to his credit in December $306.75. At the end of 1917 his share of the fund amounted to $943.66. That is, he had contributed $225 in 18 months, and the company had added $718.66. The employe must be three years in the employ of the company before he can participate in this plan, he may withdraw his contributions with 5 per cent. interest at any time, and can take out the whole amount after 10 years. Under plans like that of the Steel Corporation the employe must serve 25 years and be 60 years old before he can draw a pension. The pension ceases when he dies. Some companies pay a part of the pension to his widow and children under 16.

Yet, regardless of the plans and results, organized labor is skeptical and resentful. Mr. Fitch quotes one union publication as saying: "All of such schemes (the workers) are wont to look upon as merely on paper, and most of them they know to be designed to break up their organizations and make them as nearly as can be part of the running machinery of the various industries." An inkling of the reason for this comment appears in a quotation from another union paper: "Twenty years of continuous, faithful service are demanded by most pension-advertising corporations before a worker is entitled to a certain monthly or weekly allowance. Twenty years, during which time the slave must always be humble, never grumble, do everything demanded, never think of trying to better his conditions, be always satisfied, and never, never join his fellows in an organization for the purpose of enforcing demands he individually cannot obtain. And this is the kernel contained in the sugar-coated pension pill."

But the case against the industrial pension is even stronger than put by the union trade journal, as Mr. Fitch proceeds to show. For not only must the beneficiary surrender many cherished rights and privileges that distinguish the free man from the serf, but even that abasement and humiliation does not necessarily assure the pension. The companies retain the right to discharge the employe, and to abandon the system. Added to these hazards is the possibility of insolvency on the part of the company. Whatever may be the merits of these plans therefore, and however good the impulse that has brought them into being, they clearly are not compatible with that freedom of individuality and self-assertion that must have play if progress is to continue. Nothing has been better proven by experience than that concessions granted as a favor, when they should be accorded as a right, tend to create resentment on the part of those who receive and contempt on the part of those who give.

A pension worthy of the name, and compatible with self-respect on the part of the recipient must attach to the person, and not to the office or place occupied by the individual, and it should be absolutely free from dictatorial powers of the agency paying the pension. No one should have to forfeit his right to move about or change his condition in order to retain this insurance. All such plans will prevent the turnover of labor only as long as opportunities for employment are scarce. When the number of workers exceed the number of jobs a pension will be an additional inducement for the employe to remain where he is, but it will be at the cost of his self-respect. He will cast off the tie at the first opportunity; and meanwhile there will be rebellion in his soul.

The best that can be said for these private pension systems is that they tend to ameliorate conditions while a new order based upon fundamental principles is being established. It is not likely that many of the men who have been foremost among those who have worked out and established pension systems had any other thought than to benefit their employes. It is a mistake to charge unworthy motives to all whose actions result in evil. Ignorance is too general to warrant such a conclusion. It is a wrong economic condition that has made what appear to be tyrants and ingrates, but what are in reality victims of outraged nature.

The ill will and discontent in the industrial world are due not to evil-mindedness, but to unnatural conditions that have been brought about by unjust laws. Co-operation is the natural order. Since two men working together can produce more than twice as much as either working alone, it is to their mutual advantage to co-operate. And if both be free they will divide the gain satisfactorily. If, however, restraints be laid upon either, or upon both, the gain through co-operation is not likely to be shared equitably; and even though the division be fair, if it be made by one without the equal say of the other, there would still be discontent and unrest. In short, though employes want shorter hours, higher wages, and better conditions, they want first of all to be men and women.

It must be evident, therefore, that all such schemes as private insurance, profit sharing and industrial pensions will fail of their purpose because they savor of charity on the part of employers, and impose subserviency on the part of employes. All attempts to solve the problem along this line are doomed to failure because they are contrary to the instincts of human nature. Pensions, using the term in the sense of a gift by master to servant, have no place in a free society. But pensions, meaning insurance against want in sickness or old age, must be on the broad basis of citizenship, and must be accompanied by no thought of servility, obligation, or limitation of individual freedom. These conditions indicate government insurance, or an agency with the depth, breadth, and impersonality of government.—The Public.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

workers will not remain if they are not paid a decent living wage."

It is stated that there are 60,000 members of the United Mine Workers in the military service. In the coming months 14,000,000 tons of coal a week will be needed, and even with an adequate car supply it will be almost impossible to meet this requirement.

An Officious Official.

Roadmaster Boland of the Iowa and Dakota division of the Chicago, Milwaukee & St. Paul railroad does not bother about living wage declarations by the National War Labor Board, whose principles have been promulgated by the president.

Mr. Boland is monarch of all he surveys, and to prove he is "it," he has issued this statement to track employes:

"It has been called to my notice that a demand (or a request they call it) for an increase of wages is being made through the trackmen's organization, and I do not think many of you are cognizant of it. You all know I opposed this organization from its inception and told you of some of my reasons, but you organized, and the upshot of it is a demand (or request as you phrase it) on your Uncle Sam when he has his hands tied. Prussian organization trying to get his life blood. Do you call yourself patriots when you do this? You are not."

Senator Thomas Alarmed.

While defending his conscription-of-labor amendment to the draft law United States Senator Thomas expressed the fear "that the heads of organized labor, or many of them, propose to take advantage of war conditions to clinch the hold of organized labor upon the country."

The Senator, of course, did not include all organized labor, which permits of future alibis.

Senator Thomas represents Colorado, wherein is located Mr. Rockefeller's Colorado Fuel & Iron Company, a corporation that strangled every political and industrial power in that State four years ago, to defeat its organized mine employes. Strike guards were arrayed in the uniform of the State militia and their long record of killings culminated at Ludlow, when a tent colony maintained by the strikers was swept by a rain of bullets and nearly two score of men, women and children killed.

Non-Essential Work Defined in Capital.

The District of Columbia community labor board of the United States employment service has suggested a list of non-essential labor. While this list applies only to the nation's capital, and may be enlarged, it is believed it will serve as a guide for local boards elsewhere.

The following industries and callings are referred to as non-essential:

Auto industry accessories; drivers of pleasure cars—cleaning, repairing and delivery of same; sight-seeing cars, auto trucks engaged in work other than fuel or government work; teaming other than delivery of products for war work; bath and barber shop attendants; bowling alleys, billiard and pool rooms; bottlers and bottle supplies, candy manufacturers, cigars and tobacco, cleaners and dyers, clubs, confectioners and delicatessen establishments, builders and contractors not engaged in the erection of structures for war work; dancing academies, mercantile stores, florists, fruit stands, junk dealers, livery and sales stables, pawn brokers, peanut venders and establishments, shoe shining shops, window cleaners, soft drink establishments, soda fountain supplies.

The board was guided in these decisions by this general policy of the Department of Labor:

"For the purposes of the centralization of war labor recruiting program, 'war work' means:

"1. The manufacture of products or the erection of structures directly or indirectly supplied to some department of the government for use in connection with the war. 'Indirectly supplied' includes goods delivered under sub-contracts to Government contractors.

"2. Coal mining is wholly war work.

"3. Railroads and farms are engaged in war work to the extent that under this program they are protected from all recruiting by other industries.

"4. The making of products which may ultimately be used for war purposes, but which are not to be delivered either directly to the government or to some contractor who uses them in producing or as a part of products to be delivered to the government, is not considered war work."

THE PROPS OF AUTOCRACY.

(Continued from Page 7.)

mouth shut,' is the cordial duty of the common man as the ruling caste conceives it. In a democracy a man may have to be a soldier at times—he will pay his taxes, of course, he has levied them himself, but he will not keep his mouth shut. He is an equal partner in the great corporation of the republic; its future depends on his wisdom and that of his fellows and nothing else.

"Every autocracy rests on three legs—force, intrigue and superstition. Without a great army it could neither enforce subservience at home nor threaten its neighbors abroad. One or the other must occupy its energies. To hold its own people it needs the menace of impending foreign war, always the 'swift remedy' for internal unrest.

"With the German people as such, President Wilson has said, we have no direct quarrel. The German form of government we would not oppose if the German people who sleep under it are permanently satisfied, and above all, if it bore no menace to the rest of the world. But when it assumes the role of brigand and buccaneer, outraging its neighbors and betraying its friends, we have the right and the duty to oppose it in whatever fashion we may.

"The only alternative to absolutism is found in democratic control. It matters not what have been the failures of democracy in the past. They represent the unsteady steps of a child learning to walk. Every people which finds freedom must pass through its kindergarten stages. France has had her turn. Russia is now in the primary class with Mexico and China, and Germany—when her iron bands are broken—may not escape the same infantile disorders. Monarchial rule gives no help towards permanent government.

"Nor are we concerned with the past crimes or stupidities of Britain's imperialism in the long past of European history. The causes which now operate in Germany have had the same results elsewhere. The tyrannies from which France has forced her way to the light are familiar to all and need not detain us. The precedents of Louis XIV and the two Napoleons lend no justification to imperial Germany. St. Helena and Sedan loom large in their history, and Wilhelm II (cast in far smaller mold than either Napoleon)—'may profit by their example'."

Some day our injunction judges will wake up and find the whole world in revolt against their assumption of superiority to all law, natural as well as statutory.

The union label on any product is a guarantee that the money paid for it will return to the consumer, with interest, in the form of improved social surroundings.

NEW LABOR LAWS OF 1918.

Labor standards in war time have continued to advance in spite of scattering attempts to suspend measures for the protection of the industrial army, and gains through legislation have been greatly augmented by Presidential orders under authority of Congress to meet the national emergency, according to the summary of labor laws enacted during 1918 in a score of States and in Congress, just issued by the American Association for Labor Legislation.

"Protective labor legislation, won through long years of effort, has proved a sound basis upon which to maintain and increase the efficiency and sustained fitness of industrial workers," says the Secretary, Dr. John B. Andrews. "Recognizing this, the Federal government and the States have almost unanimously insisted upon upholding, enforcing and extending labor laws. Virginia is the latest recruit in the workmen's compensation camp, making forty-one States and territories now having this form of social insurance, in addition to the model act of the Federal government for its million civilian employes, and the Soldiers and Sailors' Insurance Act, the most important social insurance measure adopted by any country. With the experience before them of the belligerent countries in Europe, which have, in the midst of war, greatly extended the benefits of their social insurance systems, official commissions in eight States have continued their investigations of universal health insurance, called by Surgeon General Rupert Blue the next big step in American labor legislation. The Supreme Court's adverse child labor decision was a temporary setback, but the individual States continue to throw protection around the employment of children. Several States, notably New York, have this year regulated women's hours and conditions of work and have improved safety and health safeguards. Nine States have enacted compulsory work laws as war-aid measures. Of far reaching national import is the passage by Congress of the law providing for the rehabilitation and re-education of crippled soldiers and sailors and their restoration to self-sustaining industrial pursuits. Following this lead, Massachusetts has provided for similar rehabilitation of crippled victims of industrial injuries. Likewise significant are the creation by Executive order of the War Labor Board to improve industrial relations, the War Labor Policies Board to establish proper standards of wages, hours and working conditions as well as housing of workers, and the expansion of the Federal Employment Service to meet the urgent need of intelligent placement of labor."

Social Insurance.

Emphasizing anew the inroads made by workmen's compensation in the "solid South," with North Dakota the only Northern State remaining without such protection, a workmen's compensation law was enacted this year in Virginia. In several additional States existing compensation laws were amended, the changes marking a continued tendency to extend the scope, shorten the waiting period, and increase the benefits. Kentucky extended her law to cover all employers of three or more persons and cut the waiting period

from two weeks to seven days. Louisiana found it necessary to penalize employers for deducting the cost of insurance from employes' wages and created a commission to report and plan for other forms of social insurance and State insurance for public buildings. Porto Rico, with an exclusive State insurance fund, and New York, with a competitive State fund, have found it possible to liberalize their laws, while Massachusetts has slightly increased her minimum benefit. The movement for universal workmen's health insurance, to protect wage earners and their families against the hazards of sickness as workmen's compensation now safeguards them when injured, has continued to gain in impetus, with official commissions in eight States at work preparing the way for legislation.

Safety and Health.

Three States passed bills further restricting employment of children. New Jersey and Virginia strengthened their child labor laws, extending the scope and nature of employment affected, modifying working hours and raising age limits. Maryland raised from 12 to 14 years the minimum age at which children may be employed during vacations or may work in canning or packing establishments. New York forbids females under 21 from working in telegraph and messenger employments. Rhode Island has made unlawful the use of the "kiss of death" suction shuttle in textile mills.

Hours and Wages.

New York provided that no woman employed as messenger may work more than 54 hours a week, or before 7 a. m. or after 10 p. m. Virginia restricted the work day for women in factories, laundries and mercantile establishments to ten hours. Employers are forbidden by a Massachusetts law from collecting any gratuity given to employes for checking clothing. This State also made it unlawful for employers to deduct from the wages of an employe, because of tardiness, any sum larger than that part of his wages which would have been earned during the time actually lost.

Trade Disputes.

Laws to curb "criminal syndicalism" and sabotage were enacted in Arizona, Montana, Nebraska, North Dakota, and South Dakota, in addition to similar measures adopted by Idaho and Minnesota last year. Ignoring the I. W. W. definition "conscientious withdrawal of efficiency," these laws define sabotage as the violent and malicious destruction of property as a means of affecting economic, industrial or political ends or hindering war preparations. Heavy penalties are imposed. Montana, moreover, petitions Congress to formulate a Federal definition of sabotage.

Administration of Labor Laws.

Efficiency in the administration of labor laws is a matter of increasing concern. New Jersey created a workmen's compensation bureau to have exclusive original jurisdiction over all claims. Kentucky abolished the district system of administering compensation. Massachusetts ordered an investigation of the State Board of Labor and Industries. Porto Rico reorganized her compensation commission on a representative basis.

Employment Service.

Meeting an urgent need created by the movement of colored workers into Northern States, a New Jersey law establishes a migrant welfare and employment bureau to investigate living conditions among migrants, instruct them in sanitary living, endeavor to procure proper housing facilities, and to obtain suitable employment; and New York appropriated $5,000 to create an additional employment office "to best serve the interests of the Negro population." Strict regulation and gradual elimination of commercial private employment agencies is furthered in New Jersey by the imposition of heavy license fees and bonds. Montana urges Congress to provide for labor placement on a permanent adequate basis.

"Must Work" Laws.

Interesting legislative by-products of the war are the anti-loafing measures in nine States—Delaware, Kentucky, Massachusetts, New Jersey, New York, Rhode Island, and South Dakota in 1918 and Maryland and West Virginia in 1917—to compel able-bodied men not subject to the draft to engage in useful occupations. The laws in most cases affect male residents between 18 and 50, and hours and wages for enforced work are to be maintained at prevailing standards. Persons temporarily unemployed because of differences with their employers, as well as bona fide students, are specifically exempted by most laws.

HOLD YOUR LIBERTY BONDS.

To successfully finance the war it is necessary that owners of Liberty Bonds hold their bonds if possible. Where for any good reason it is necessary for them to turn their bonds into cash they should seek the advice of their bankers.

Liberty Loan Bonds are very desirable investments, and crafty individuals are using various means to secure them from owners not familiar with stock values and like matters. One method is to offer to exchange for Liberty Bonds stocks or bonds of doubtful organizations represented as returning a much higher income than the bonds.

There are various other methods used and likely to be used, some of the gold-brick variety and others less crude and probably within the limits of the law. All offers for Liberty Bonds except for money and at market value should be scrutinized carefully. The bonds are the safest of investments and have non-taxable and other valuable features.

To hold your Liberty Loan Bonds, if possible, is patriotic. To consult your bankers before selling them is wise.

THE OATH OF NATURALIZATION.

None of us who were born abroad will ever forget the oath of allegiance we took. We swore thus:

I do hereby declare, on oath, that I absolutely and entirely renounce and abjure all allegiance and fidelity to any foreign prince, potentate, state or sovereignty, and particularly to ——— the ——— of ——— of whom I have heretofore been a subject; that I will support and defend the Constitution and laws of the United States of America against all enemies, foreign and domestic; and that I will bear true faith and allegiance to the same, so help me God.

Note that the oath of naturalization particularly mentions giving up allegiance to the old country. A man can not serve two masters. If he votes, acts, or talks in the interest of that old country for any reason whatsoever against the interests of his new allegiance he is a cheat, a perjurer; he is legally and morally a man without a country.

Labor News

The American Flint Glass Workers' Union has secured wage increases as a result of conferences with manufacturers. Rates are advanced 21 per cent. for blowers and 30 per cent. for gathers, making the present wage $6.70 a day for the latter and $8.10 for the former.

The Bureau of Labor Statistics of the Federal Department of Labor has started a countrywide probe of the high cost of living. The findings will be used as a basis in making wage adjustments. Every housewife visited by Government representatives is urged to furnish the information asked for.

Striking cloak, suit and skirt makers at Cleveland, Ohio, have accepted the plan submitted by Secretary of War Baker to end this dispute, which was caused by low wages and victimization. The settlement includes reinstatement of all strikers and wages fixed by referee for a period of not less than eight months. A Government representative reported that 60 per cent. of the workers in this industry in Cleveland earned $800 or less a year, and that women earned only $10 a week for the first six months of their employment.

What is considered the Administration's attitude on the question of labor conscription was indicated by Louis F. Post, Assistant Secretary of Labor, before the Association of Commerce. The Federal official said: "The time may come when we may have to conscript workers in mines, forests and factories, but in the name of democracy these men shall not be conscripted until we have first conscripted the places where they shall work. This democracy will not stand for the conscription of men to work for the profit of other men. The conscripted man must work for Uncle Sam and no one else."

Failing to break the strike of its textile workers at Columbia, S. C., the Swift spinning mills made a successful appeal to Governor Dorsey to send the military to that city under the plea of existing violence. At a mass meeting of citizens the Governor was asked to order the return of the soldiers to their camp, as existing conditions did not warrant their presence. The mill owners have secured an injunction against Organizer Thomas of the United Textile Workers restraining him from attempting to unionize these workers. The military and injunction judge, however, have had little effect on the strikers.

The international conference in Laredo, Texas, between representatives of American and Mexican trade unionists, beginning November 13 next, promises to be an historic event. President Wilson has been invited to attend, as has President Carranza of Mexico. Governor Hunt of Arizona was the first State executive to announce his intention of being present. In a letter to President Gompers he said: "A short way to establish a better understanding between this country and Mexico than has ever existed in the past would be to establish that understanding through labor. National conditions in the northern part of Mexico are almost identical with conditions of the border States in this country; industries are the same. This can only be done through education and fraternity of labor."

The annual report of the American Hide & Leather Company for the last fiscal year shows a clear profit above fixed profits of $2,385,613. This is an increase of $622,863 over the previous year.

Corporations which attempt to dodge war taxes by increasing their capital stock to cover surplus and undivided profits have been warned by Internal Revenue Commissioner Roper that this will be of no avail, since the capital actually invested in the business, rather than the amount of outstanding capital stock, is the basis for measuring taxable excess profits.

Figures made public by the Wisconsin State Board of Health show Wisconsin has the lowest typhoid death rate in the Union—6.7 per 100,000 population. Kentucky ranks highest with 38.2 per 100,000 population, followed by North Carolina, with 31.9; Maryland, 27.1; Mississippi, 21.2; Indiana, 20.4, and Ohio, 18.7. Wisconsin's ranking position is due, according to the State health officials, to better protection of water supplies; greater knowledge by the civilian population of the care of typhoid patients and higher grade of plumbing and scientific disposal of household wastes.

The Postoffice Department says that faulty address is one reason for the non-delivery of mail to soldiers in the military camps in the United States. Postmasters are instructed to notify relatives and friends that unless mail is addressed to the company and regiment or other distinctive organizations of these soldiers, delays in delivery or failure to deliver may result. It is urged that correct and complete addresses and return cards be placed upon all classes of mail, especially at this time when many new men are joining the service and old units are being transferred to other camps.

The National Forest Reservation Commission has just approved for purchase 54,672 acres of land for national forests in the White Mountains, Southern Appalachians and Arkansas. All of these lands solidify the Government holdings and carry out the present policy of the commission to consider no lands which do not tend to block in with others previously approved for purchase. The largest tract is one of 31,667 acres in Poly County, Tenn. It fills out the entire southern end of what is known as the Cherokee purchasing area. The price approved was $6 an acre. A large portion of this tract is well timbered; there is more than 20,000,000 feet of merchantable timber on the entire tract.

Government demand for Sitka spruce for airplane construcion has made itself felt in the vicinity of Nome, Alaska, to the extent that staking of timber claims has commenced in the Norton Bay section. A large area of timber land, said to contain approximately five million feet of excellent spruce timber, is reported to have been staked in the Tubuktolik section recently. Some of the trees are said to measure six and eight feet through. This timber tract is situated close to the coast and may be logged and placed in the water with little effort. Spruce growths in the Kobuk section are also said to be coming in for considerable attention and timber from that district may soon be added to the world's supply. The Kobuk section has a water frontage on Kotzebue Sound.

Domestic and Naval

No tidings have been received from the long overdue Boston ship "Avon," now out 134 days from this port to the River Plate. The vessel has made the passage in forty-six days, and her longest trip was 103 days. It is generally believed the vessel has fallen victim to a German raider or submarine. She carried 40,000 cases of oil, which would prove a valuable prize for the Germans.

A suit for $55,000 damages has been filed in the Canal Zone District Court at Ancon by the attorney for Holder Middleton & Co. of London, England, against the Governor of the Panama Canal on account of injury to one of its ships while in transit through the canal. The case is in the nature of a test to ascertain whether a ship owner can recover damages in accidents to vessels while passing through the canal.

Among the old shipyards on the North Atlantic Coast which have opened up this season for business after being idle for many years is one at Harrington, Me., where Thomas G. Greenlaw is constructing three large schooners for Frye, Flynn & Co., of New York. Work on the first craft is well along, and it is expected to commence on the second in a few weeks. At Camden, R. L. Bean has contracted for three four-masted schooners. Each will be of 1150 gross tons, and cost about $150,000.

In an effort to speed up the Government's shipbuilding program, Charles M. Schwab, after a conference with representatives of all the Atlantic Coast steel shipyards, at Philadelphia this week said that the direction and management of the yards hereafter would be collective rather than individual, and that piecework would be adopted as the wage basis. More than ninety shipyard officials attended the conference, which Mr. Schwab described as a "get together and speed up" meeting.

The Emergency Fleet Corporation has been reorganized, the purpose being to outline more specifically the duties of Mr. Schwab's assistants. Charles Piez is named general manager, which title he resigned to retain that of vice-president in charge of construction when Mr. Schwab became director-general. Howard Coonley is named vice-president in charge of administration, subject to the managerial direction of Mr. Piez. J. L. Ackerson is made executive assistant to Mr. Schwab in charge of shipyard plants, supply, wood and steel ship construction, passenger transportation, housing, plant protection and planning.

Freight traffic between New York and Philadelphia through the Raritan Canal has increased greatly in volume during the last few months. This is said to be one of the results of the management of the United States Railroad Administration. The Raritan Canal is being operated by the Inland Waterways Commission, of which G. A. Tomlinson is Federal manager. The policy of the commission is to direct the operations of the canal and to encourage outside companies to operate their boats. The only company running a regular daily service is the New York and Delaware River Steamship Corporation, which has a New York terminal at the Brooklyn Bridge Dock, and a Philadelphia terminal at Pier 16, South Wharves.

News from Abroad

The Newfoundland schooner "Fisherman," recently reported lost at sea, was not sunk by a submarine, but sprang a leak and had to be abandoned. Advices received in Halifax state that the crew were sent from Lisbon to Liverpool en route home.

Merchant tonnage losses in July due to enemy action and marine risk was 313,011, which makes the total for the quarter ending with July for allied and neutral countries 959,392. Ships built in British yards and in foreign yards on British account in July reduced the British deficit to 22,311, which compares favorably with the average monthly deficit during the first six months of this year of 90,000 tons.

It is estimated in Great Britain that 300,000 cottages must be built there soon and lumbermen of the British Isles are discussing the practicability of producing the lumber from their own wood growths. The housing scheme calls for nearly a billion feet and the effect of the building trades entering the market, which now supplies only the wartime essential industries, is given the most serious consideration.

The Norwegian Government whaling vessels have caught over 100 whales since the prohibition against whaling was raised a short time ago. Ninety-four of them were taken to a whaling station near Bergen, which has been working for three months. It is calculated that the whaling will continue for six months and that with five stations and 17 ships it should be possible to catch 500 whales every year. One whale yields an average of 30 barrels of whale oil, or from 5 to 5½ tons of fat. The fat is used to a great extent in making margarine.

The operation of a number of the wooden steamers which have been built in British Columbia for the Imperial Munitions Board will be entrusted by the British Government to Messrs. Easton, Greig & Co., of Glasgow, Scotland, the first ship to be placed in their charge being the "War Masset," which was built by the Foundation Co., and completed by Yarrow, Ltd. Other ships to be operated by the Scottish concern will be the "War Haida" and the "War Skeena" which are now in course of completion for sea. The first six vessels of the wooden fleet built in this Province were turned over to the Fernie Line for operation.

A recent issue of Le Matin, the Parisian newspaper, gives an interesting example of characteristic American energy and speed. In a certain spot in central France where last December stood a thick forest there has sprung up, under the hands of American engineers and workmen a huge meat-refrigerating plant. The encampment, which has for its special object the provisioning of American soldiers in France, covers a space of 10,000 acres. The refrigerating plant holds 10,400,000 pounds of meat, which is equivalent to 15,000 cattle weighing on the average 700 pounds apiece. It produces 500 tons of ice per day in excess of that used at the plant, which is used in the transportation of meat in the refrigerator cars and also for the conservation of other perishable foodstuffs, especially margarine.

With the Wits

Lacking in Range.—"Does the new soprano's voice fill the church?"

"No; I notice some vacant seats up in the gallery."—Boston Transcript.

How Ma Felt.—Willie—Paw, why do women cry at a wedding?

Maw—Because they have been married themselves, my son.

Paw—You better keep your mouth shut, young man.—Cincinnati Enquirer.

Will be Fed Up With Fight.—The American soldiers are the best-fed fighting men in the world, according to the War Department's diet expert. But before the war is over the German soldiers are going to be the best fed-up fighting men in the world.—Syracuse Herald.

Yes, Why, Russia?—After biting off a Slavonic ear in the first act, throwing her off the bridge in the second, kicking her in the eye in the third, Germany now exclaims as the curtain rises on the fourth, "Why do you not love me, Russia?"—Kansas City Times.

Yeast—So you've been back to your old home town, have you?

Crimsonbeak—I certainly have.

Yeast—And did anybody recognize you?

Crimsonbeak—I should say so. Everybody I owed money recognized me instantly.

Yeast—Only those recognized you?

Crimsonbeak—Only those? Say, I owed everybody in town when I left.—Yonkers Statesman.

Words Could Not Hurt.—"James," said Mrs. Mellow to the man servant, "can you find out whether the tinned salmon was all eaten last night? I don't want to ask the new cook, because she may have eaten it, and then she would feel uncomfortable."

"Please, ma'am," replied James, "the new cook ate all the salmon, an' no matter what you was to say to her you couldn't make her more uncomfortable than she is now."—Baltimore American.

An Invitation

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL.

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 2. SAN FRANCISCO, WEDNESDAY, SEPTEMBER 18, 1918. Whole No. 2504.

THE VALUE OF EDUCATION.

Views of Labor's Representative on the U. S. Board for Vocational Education.

Mr. Arthur E. Holder, for many years Legislative Agent for the American Federation of Labor at Washington, D. C., and now the representative of Labor on the Federal Board for Vocational Education, has supplied the Journal with the following instructive paper on the "Value of Education":

Education is preparation for life. Primarily it is maintenance of life. It is necessary to a continuation of life. When education in the life of an individual, a group or a nation stops, then decay commences; dissolution and death are a natural result.

Herbert Spencer tersely defined education in these words:

"To prepare us for complete living is the function which education has to discharge."

Webster's definition is:

"To form and regulate principles and characters, to prepare and fit for any calling or business by systematic instruction; the impartation or acquisition of knowledge, skill or discipline of character."

The education of our people can only be accurately measured by their ideals and principles acquired through individual instruction and social training so that their happiness, efficiency and capacity for social service may be furthered, developed and strengthened.

Education Is Preparation for Life.

Education as a preparation for life should primarily aim to give every individual proper control over his physical and mental powers. Then he should be taught and inspired how to use these powers to the best advantage for himself and for society.

Education should also be directed to enable every individual to develop all his latent special and general powers. The results would net society untold advantages because it would broaden the public vision. Greater insight and mental penetration would follow as a matter of course and the increased public fund of information could be better applied in a greater range of problems affecting life and work.

The whole problem of progress is fundamentally an educational function.

The problems which will face us in the future will test the ability of our citizens even if they are all equipped with the best education our schools can afford. Within our Republic every individual should possess the rudiments of an education upon which he can train himself to a higher education,—if for any cause he has been denied other opportunities.

The recent startling disclosures that 700,000 men liable to military service, can neither read nor write, and that 1,500,000 illiterate native born white persons were reported in the 1910 census, is not only a serious reflection upon our lack of foresight, but it constitutes a positive menace to our institutions. Unfortunately, these disclosures are only part of the truth. The 1910 census report says that there were on that date, 5,516,163 persons over ten years of age in the United States who could neither read nor write in any language.

If opportunity for the rudiments of an education has been denied these illiterates, or if educational opportunity is withheld from the least among our people, nothing less than a crime is being committed against our Republic.

Criticism Alone a Poor Remedy.

It will avail us nothing, however, merely to call attention to those shortcomings. We must face the facts and correct the errors. As a people, we must assume our own responsibilities and not seek to place blame where it does not properly belong. In our moments of impatience we are prone to criticize our schools, altogether too harshly. Some even enjoy quoting Mark Twain when he jokingly said:

"In the first place God made idiots. This was for practice. Then he made School Boards."

Why Mark shot his bolt at School Boards and not at the labor unions or employers' organizations has never seemed quite clear. Probably be considered it more popular to strike at those who could not or would not strike back.

If we must criticize, let us be sure of our ground, if we refuse to bear our responsibilities as a people and must level our satire at a group, then let us hit the bull's-eye and place the principal blame for the defects in our educational system upon that group in society which is primarily responsible for the creation of our free schools and our public school system. That group is the labor group.

About a hundred years ago the organized wage earners of the New England States made a bitter protest against oft-repeated phrases by public speakers who preached the doctrine that:

"Equality among men results only from education; the educated man is a good citizen, the uneducated an undesirable member of society. The uneducated must ever remain in a degraded caste."

Continual repetition of such gibes greatly disturbed the souls of the illiterate sons of the new Democracy who had fought so hard to establish these free and independent United States. The shafts of ridicule and contempt had their effect. Free, equal, practical, republican education became the slogan of the manual toilers.

At a specially called mass meeting of working men in New York, November, 1829, this resolution was adopted:

"Resolved, that the most grievous species of inequality is that produced by inequality in education. A national system of education and guardianship which shall furnish to all children of the land equal instruction at public expense is the only effectual remedy for this and for almost every other species of injustice.

The Greatest of All Reforms.

"Resolved, that all other modes of reform are, compared to this particular, inefficient and trifling."

No better argument has ever been made to support our subject that "Education is preparation for life." From this small beginning our free public schools have developed. Labor created the institution, fostered and protected it in many struggles. Labor has created public sentiment in behalf of compulsory education laws, free text-books, and vocational education, but, notwithstanding these activities, Labor has neglected the personal touch and the neighborly acquaintance which should be maintained with the teachers, so the teachers themselves can continue their education and develop their fund of new knowledge necessary for the preparation and maintenance of the life of their pupils. Labor should not forget its child, neither should the teachers ignore or forget the potential power of Labor.

Laborers, teachers and employers should get together and work for the common good. Sometimes we blindly boast of our schools, public and private; richly endowed colleges and State universities; but, we have not yet become properly enthused with the functions of either, neither have we yet reached what the French call "the grand passion for education," and we never will until we collectively come to the point where every normal boy and girl in our land, under the age of sixteen, will be compulsorily kept in contact with the school and properly trained for such a preparation for life which will be most suitable to their capacity and disposition.

The old world, as we formerly knew it, passed away in the fatal days of July, 1914, when the most sacred treaty obligations were violated by Germany.

The Old World and the New.

Up to that time we were governed more by the dead than by the living. Dead men inspired us; dead opinions held us in leash; dead visions and dead practices stunted our growth.

We are now living in a new world. The dead past can never return. We will never again accept, without critical examination, old ideals, old practices or old principles simply because they were old and had served the generations which have passed.

It is hoped that we will be equally critical and analytical of new methods and new principles, and steel ourselves against accepting every new proposition, simply because such propositions are new.

One of the most aggressive publications I ever read, carried this novel card on every issue:

"Read not to believe, read not to dispute, but carefully analyze and personally consider."

Such advice if heeded builds self reliance, more independence, better citizenship.

On March 20, of this year, our wonderfully gifted Chief Magistrate was credited with expressing, in his most convincing and scholarly style, a timely warning and inspiring exhortation.

In a letter to his New Jersey friends, he wrote:

"A time of grave crisis has come in our lives. . . . Every sign of these terrible days of war and revolutionary change, when economic and social forces are being released upon the world whose effect no political seer dare venture to conjecture, bids us search our hearts through and through and make them ready for the birth of a new day—a day, we hope and believe, of greater opportunity and greater prosperity for the average mass of struggling men and women,—and of greater safety and opportunity for our children. . . .

"The men in the trenches who have been

freed from the economic serfdom to which some of them had been accustomed, will, it is likely, return to their homes with a new view and a new impatience of all mere political phrases, and will demand real thinking and sincere action."

I venture to say that search as we might through the pages of ancient or contemporaneous history we would never find any leader of men uttering such a clarion call to heed the signs of a new time, a new freedom, a new world.

The President's Soul-Inspiring Words.

Hope, sympathy and action dominate every syllable of our President's expression. He is looking forward, and bids us look forward.

His vision is clear, he looks upward, and inspires us to look upward.

He does more. He peers farther, wider, deeper than any previous prince, potentate or president of past or present generations of men ever had the intelligence or the disposition to venture; he looks inward, first into his own heart and then he urges us in words so tender but so compelling to "search our own hearts" not casually, but thoroughly. "Through and through," he says, and then he adds this as a climax, "make our hearts ready for the birth of a new day,—a day of greater opportunity and greater prosperity for the average mass of struggling men, women and children."

Truly a magnificent lesson from a great teacher. These hopeful soul-inspiring words of Woodrow Wilson, will live as long as men inhabit the earth, and for ages they will be used in combination with the Sermon on the Mount, and Lincoln's masterpiece at Gettysburg.

To whom may we suppose was he speaking—to the few selected representatives at Newark? No! He was speaking to all of our hundred million American neighbors and fellow citizens, and especially to you, members of the National Education Association; you, responsible teachers and leaders in your own States and several communities.

He undoubtedly hoped his words should find a ready welcome in the hearts and minds of our captains of industry.

The men and women engaged at manual labor whose burdens in the past have been the hardest to bear, will respond, with a will, to the task of getting ready for the birth of a new day.

Pay heed especially to his encouraging promise that a new education, as a preparation and maintenance of life, is now in the making, not merely an education for children, but an education for full grown men,—our heroes returning from the front.

Listen, you educators, you employers, you business men, you merchants, you trade unionists, you public servants, here is the warning and here is the hope:

"Men in the trenches freed from economic serfdom to which some of them had been accustomed, will return to their homes with a new view and a new impatience of all mere political phrases, and will demand real thinking and sincere action."

Many earnest, private citizens have indulged in this thought and hope, but no one ever phrased it so completely, and loaded it with so much dynamic energy as did the President.

The excerpts from this letter contain the necessary inspiration we have been seeking. They show the way out. They point to the path ahead. They urge us to action, to make this world a brighter and happier dwelling place.

During our existence as a nation, the American people have quickly and enthusiastically responded to a real leader who held aloft ideals of a broader education, and a purer democracy.

Now that the nation's problems and the world's problems loom larger, our President calmly but specifically calls our attention to the new problems and the new duties ahead.

If we heed the lesson as we should we will commence to overhaul our whole system of education, commencing with the homes and the schools.

If we possess the intelligence we boast of we will display a discriminating taste. We will discard and throw into the scrap heap the outgrown dead things and dead practices, to which we have been so partisan.

The Greatest Public Investment.

We will save and improve old ideals that are proven to be worth while; we will rebuild and readjust our educational machinery; we will burnish it up and make it attractive; we will brush away the cobwebs of mystery and confusion; we will remove doubts, fears and injunctions; we will remove unnecessary and un-American restraints; we will learn the difference between economy and stinginess; we will generalize before we specialize; we will distinguish between civility and servility; we will be affirmative, positive, aggressive and generous, rather than cautious, timid, docile and negative.

Our homes, schools, shops, stores, factories, will become educational centers of greater value than ever before. Real practical, valuable education, fitting each person for a greater enjoyment of life, and a greater participation in public affairs will be the rule instead of the exception.

Education for the mass instead of the class will be our motto. The bed rock foundations of society will be made secure before the superstructure is erected.

Manual toil will be given equal credits with brain labor. The hard laborious task is entitled to equal consideration with the pleasant berths of physical ease.

Every active element of society will participate with educators in the administration of all our schools, especially in the elementary, secondary and high school grades.

In every community and State, labor men, business men and medical men will be called into counsel to encourage and assist in solving the difficult tasks confronting our loyal painstaking educators.

Too long, far too long have the school teachers been left to their own resources, public confidence in them has been carried to a foolish extreme, as a consequence each element has suffered, first, because they did not know each other, and second, because there has been no common understanding among them.

Freer thought and freer expression will be the outcome. These functions are the very essence of democracy.

The right to complain, criticize and find fault must be equally safeguarded with the right to approve and praise.

No longer shall we look admiringly on an individual or a class that shows evidence of being merely automatic, nodding affirmatives.

We want to know what is wrong as well as what is right. The only way to find out, is to cut the Gordian Knots of silence, false respect, and humble docility.

When we start in earnest to provide real education, to be a real preparation for life, we must first provide the means; more school revenue must be forthcoming. We cannot get something for nothing. Up to the present our educational funds have been too meager.

All our educational work must be under public auspices, and at public expense. When the public knows the advantages for better preparation and maintenance of life through better and broader education, the public will open its pockets and generously provide the wherewithal. It may happen that the bed-rock of all wealth may be tapped. A reasonable tax on rental value of all land would furnish the safest foundation for educational purposes. Land values are created by the presence and activities of all the people—it should follow as an axiom that all the people should share in the values they create. The share they are entitled to should be expended first in educational work.

Brushing Away the Cobwebs.

Our public schools constitute one of the greatest public investments. Several hundred millions are invested in buildings alone. These buildings should be used more generally for adult and community education and welfare.

Make the schools open forums to all the people and the greatest single advance will be made for greater popularity of our educators and our educational institutions.

Once this step is taken, the public will realize that our school teachers are being mistreated, and that their wages are wholly insufficient.

No generation in the history of our country has shown more patriotism and loyalty than the present generation, educated almost wholly in our public schools.

Much of this credit is due to our splendid corps of teachers in the graded schools. They have certainly done their work well. They have earned their pay many times over. No group has helped more to "make the world safe for democracy" than have our school teachers.

School teachers deserve a raise in wages—a good substantial raise,—over one hundred per cent. raise in many localities. The minimum wage base that has been popularized by trade unionists and which has been so effective in protecting the interests of our skilled and unskilled manual toilers should be intelligently applied to the method of paying teachers' wages or salaries.

Nothing less than $1200 per year will be adequate or just as a minimum rate for our teachers. It can never be secured by teachers, as units, or by individual effort; they must learn how to organize and protect their trade, occupational or professional interests like other people; they must combat opposition; they must first learn how they may collectively stand upon their own feet and depend upon their own resources. Then, they must demand a voice in the management of the schools of their community, so they can more generously contribute from their knowledge and experience for the benefit of the schools. If representative management of schools is to be a success, the teachers must have a full voice. In addition they should study the methods of other elements in society by association and federation. The right to so organize and federate must be held inviolate for school teachers as well as for doctors, lawyers, mechanics and laborers. When these new activities are established success will follow and long deferred justice will be won for our teachers.

These first steps must be taken before educators can move freely and smoothly along lines of the new endeavors required for the birth of a new day, and before the body politic can obtain the advantages of a real genuine education, which will prepare and enable them to properly maintain life.

So far as it goes our educational system is all right, but it does not go far enough or deep enough. It is still a long distance from simon pure democracy and will be until we realize that education is not expected or intended to be a luxury for a superior child, or an exceptional child, or a well-to-do child to bask in. Education, to be democratic and to properly equip for life, must be free as the air we breathe, for every mother's boy and girl, everyone "of the least of these, my brethren," black or white, rich or poor, bright or dull.

Our future bricklayers, carpenters, plumbers and blacksmiths need as much care and as much preparation for life as our future doctors, lawyers, preachers and teachers.

This great bread and butter question, politely called the economic problem, is the impelling force that will drive us to a new brand of democracy which will be safe for us and safe for the world, a democracy that means not only universal liberty, but, universal organization that will guarantee equal opportunities and equal justice to all.

SOLDIER AND SAILOR INSURANCE.

Every American soldier or sailor lost on the torpedoed transport "Tuscania" was protected by the United States Government insurance and Government compensation. This has been officially announced by Secretary McAdoo.

Those who had not applied for insurance were covered by the automatic insurance under the law which is payable to a wife, child or widowed mother. This automatic insurance aggregates $4300, netting $25 a month for 240 months.

Of those who had applied for and obtained insurance many had taken out the maximum amount of $10,000, netting $57.50 a month for 240 months.

There have been various causes for delay in forwarding checks to the dependents of soldiers and sailors.

The distance of many of the applicants from Washington and the mail congestion prevailing more or less all over the country have caused delay both in the receipt of the applications by the Treasury and the reecipt of the checks by the beneficiaries.

Another cause is that of the checks sent out—10,000 could not be delivered because the dependents to whom the checks were payable had moved, leaving no forwarding addresses or the addresses originally given were incomplete or erroneous or so illegibly written that they could not be properly deciphered.

Nearly 500,000 checks were mailed out in January and all possible expedition is being made to get all the addresses and other details correct so that the dependents of the soldiers and sailors will receive their allowances promptly and certainly.—U. S. Treasury Department Bulletin.

SAVING AND SERVING.

By economizing in consumption and with the resultant saving purchasing the Government's war securities the American citizen performs a double duty. The citizen and the Government can not use the same labor and material; if the citizen uses its, the material and the labor can not be used by the Government. If the citizen economizes in consumption, so much material and labor and transportation space is left free for Government uses. And when the saving effected is lent to the Government more money is thus placed at the disposal of the Government.

The more the people save the more money, labor, and materials are left for the winning of the war, the greater and more complete the support given to our fighting men.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Lost Traveling Time Paid by Employers.

The National War Labor Board has ruled that employes of the National Refining Company, Coffeyville, Kan., shall be paid for the time spent in traveling to and from the different oil fields, with overtime rates where they either work or travel in excess of eight hours, together with all of their expenses.

This is the first time the Board has made an award of this character. The basic eight-hour day is established, as is machinery for the speedy adjustment of future differences.

The award embraces numerous sanitary requirements in the oil fields, including drinking fountains, toilets, lockers and bathing facilities. Wherever practicable all strikers shall be given preference in employment, seniority rights are secured and membership in a union shall no longer be a cause for dismissal or a bar to employment.

Joint Chairman Frank P. Walsh makes this comment on the award:

"This is the first constructive effort on the part of the Government to stabilize labor conditions in the mid-continent oil field, where the relations of the workers and employers up to this time have been characterized by innumerable difficulties and lingering antagonisms. In some parts of the immense field feeling has run so high that ku klux klans were organized, lynching parties formed, alleged I. W. W.'s and others tarred and feathered, charges and counter charges of sabotage and other destructive practices made by both the workers and the employers. The mid-continent field produces 65 per cent. of all the gasoline content oil in the country and the total production is staggering in volume and value. The production of oil lies at the very base of the military and naval program of the Government, and the perpetuation of unrest in the mid-continent field could not but have a detrimental effect upon oil production."

Santa Fe Shop Men Unite.

The convention of shop men employed by the Atchison, Topeka & Santa Fe Railroad, to organize a system federation and district lodges, marks a changed policy on this railroad, starting with Director General of Railroads McAdoo's general order No. 8, last February, that:

"No discrimination will be made in the employment, retention or conditions of employment of employes because of membership or non-membership in labor organizations."

Before Government control of railroads, the Santa Fe was bitter in its opposition to organized labor. Several years ago, and before railroad shop men had perfected their present system of federation, the machinists were defeated after a long strike.

During the present agitation for a system federation the company attempted to block this movement by discharging employes, but they were reinstated through the Federal Department of Labor.

A peculiar feature of the Santa Fe's opposition to trade unionism is the early expressed opinion of its executive—President Ripley—regarding Government ownership of railroads. He was one of the first railroad officials to acknowledge that this was inevitable. He has failed, however, to acknowledge that the recognition of trade unionism is inevitable. Now he is helpless as he sees the Santa Fe controlled by a Government that notifies shop men they have the right to join with their fellows, and that they will be protected if they take such action.

Labor Board's Award Rejected by Bosses.

The Smith & Wesson Arms Company of Springfield, Mass., is in favor of this Government's war against autocracy, but it opposes Uncle Sam's efforts to extend democracy at home.

The company has refused to accept the award of the National War Labor Board, which ordered it to recognize collective bargaining, abandon its individual contract system and reinstate victimized trade unionists. The company has notified the War Department that it can take over its plant. Under the law the Government can commandeer this or any other plant, regardless of the company's wishes.

The Machinists' Union has been conducting a successful organizing campaign among the 1,200 men and women employes of Smith & Wesson. Prior to this these employes were compelled to buy their own tools, oil, waste, and even ice.

To more effectively oppose trade unionism the company forced individual contracts on employes, who were discharged as fast as it was found that they had affiliated with organized labor. On this question the National War Labor Board ruled:

"The practice of the company in times past to take restrictive personal contracts, even if lawful when made, is contrary to the principles of the National War Labor Board, and the practice of taking such contracts should be discontinued during the period of the war."

To enforce this decision, and to assure workers of their right to bargain collectively, the Board assigned representatives to see that its award was complied with.

This was too much for these patriotic gentlemen, who shriek against the Kaiser's autocracy.

Boys to be Educated at Nation's Expense.

The Government has arranged with more than 300 colleges to continue the education of boys before they are called to the army. Military training, under an army officer, will be a part of the educational system of these colleges. The boys must be 18 years and over and will be considered as soldiers on active duty. They will be under military discipline, receive the pay of privates, and their tuition, clothing and sustenance will be provided by the Government.

All boys who are sufficiently educated to pass the entrance examination of any of these colleges may become members of the students' army training corps.

Where boys have only received a grammar schooling and cannot pass the college examination, they may receive vocational training.

World's Workers

In an address at Washington Mrs. Howard Hannaford, wife of a missionary in Japan, stated that girls 12 years of age worked ten and twelve hours a day in that country. The speaker emphasized the need for legislation in Japan to correct this evil.

Reynolds's Newspaper of London, England, opposes the plan for the Government to abandon its ship yards and turn this industry over to private management. In support of this position, the editor says: "There has not been one strike in the royal yards during the war."

According to dispatches from Amsterdam a woman has been elected to the Dutch Parliament. The successful candidate is Miss Grovenweg, who was on the Socialist Labor ticket. Under the revised constitution of Holland women are eligible to seats in Parliament and Miss Grovenweg was one of twenty women who contested for election.

The British Government has accepted the demands of 22,000 striking policemen, who have secured wage increases and the reinstatement of a London policeman who was discharged because of his activities in the organization of the policemen's union. The Government has recognized the National Union of Police and Prison Officers as a "federation," but not as a trade union.

The House of Commons has passed on third and final reading the education bill introduced last year, which will limit child labor. The bill is expected to bring about many changes in the educational system of England, since it provides for nursery schools for children under 5 years of age and compels attendance at school of all between 5 and 14. It also forbids the employment for profit of any child under 12.

A notice calling up all the Serbian male population between the ages of 17 and 55 has been published in the newspapers of Belgrade, according to a Serbian source of information communicated to the Department of Labor. This is interpreted to mean the collective forced recruiting for the purpose of harvesting for the Austro-Hungarian military stores. Announcement was made July 28 that all persons of both sexes between the ages of 11 and 60 would be considered as liable to be called to work.

Street car men of Ottawa, Canada, have won their appeal against an arbitration award under the Canadian "can't-strike" law, and wages have been increased over those granted by the arbitration board. This case is the first to be considered by the new appeal board, consisting of representatives of the government, workers and employes, which will review the findings of arbitration boards, if either party is dissatisfied. Objection has been made to the "can't-strike" law because of delays that employers have taken advantage of. When the street car men asked that the appeal board review their case, they were notified by the Government that such action would be taken "within 10 days." This sounded like the old story and the men suspended work. The workers were then notified that the board would consider the matter "immediately." The men returned to work and the question was settled in record time.

Pacific Coast Marine.

The Kiernan & Kern Shipyard, Portland, Ore., has received a Government contract for four wooden steamers, each to have capacity of 4500 tons and costing $2,600,000. The plant will be increased from two to four ways.

The San Diego Marine Corporation, San Diego, Cal., is being organized to operate the new Government shipbuilding works to be located at that point. The works will include machine shops, forge shops, pipe works, erecting shops, and administration structures. The initial plant will consist of twelve buildings estimated to cost over $5,000,000.

The Sundry Civil Bill for 1919 carries an appropriation for a new vessel for the Coast and Geodetic Survey Service, to cost not over $354,000; a motor-driven vessel to take the place of the Taku, condemned as unseaworthy and sold some time since; also, for more launches, including their equipment. These vessels are much needed for survey in Alaskan waters.

J. H. Hansen, president of the Skandia-Pacific Oil Engine Co., which has offices in San Francisco and a plant in Oakland, returned from Philadelphia recently with a contract for twenty Diesel engines, to cost $2,500,000. Each engine will develop in excess of 1100 horsepower, and will be fitted in fabricated steel ships of the Emergency Fleet Corporation.

Five new buildings that will double the present capacity of the United States Marine Hospital at Fourteenth avenue and Lake street will be erected at once, it was announced recently. Provisions of the eight-hour law for work on Government contracts have been suspended and the buildings will be rushed to completion. The hospital will care for 300 patients. The cost of the new buildings and improvements will amount to about $275,000.

Eight wooden steamers a month hereafter will be delivered to the Government, ready for sea service, from the Portland and Columbia District, according to the program mapped out by J. B. Morris, chief of machinery and installation for the Emergency Fleet Corporation at Portland, Ore. Seventy-three wooden hulls, on a recent date, were in process of being equipped with engines, boilers and other gear in the district.

Six additional contracts for the construction of Ferris type ships for the Emergency Fleet Corporation have been awarded to the Seaborn Shipyards Company at Tacoma, making a total of fourteen. Seven of the fourteen ships contracted for have been launched, two of which are in service and two more soon will be delivered to the Government. Contracts for two more Ferris ships recently were awarded to the Wright Shipyards Company at Tacoma.

One of the Pacific Mail steamers operating between a Pacific Coast port and the Orient was caught in the same typhoon that caused the sinking of the schooner "Ethel Zane," according to the statement of Captain A. W. Nelson when his command arrived at a Pacific port. "It was the worst typhoon of my experience," said the captain. "I have made 166 voyages across the Pacific as commander of a Pacific Mail liner, but, despite numerous terrific gales, none could compare with this one."

J. J. Dwyer, former president of the State Board of Harbor Commissioners, has taken up his duties as harbor development expert of the San Francisco Chamber of Commerce. Chamber of Commerce officials say Dwyer is well qualified to work out a program for the expansion of the facilities of the harbor. General Manager Robert Newton Lynch of the Chamber of Commerce said the Chamber of Commerce is co-operating with the Harbor Board and the Federal Shipping Board in adapting the facilities of the harbor to the growing commerce.

A. Merritt Taylor, director of passenger transportation and housing for the Emergency Fleet Corporation, arrived at San Francisco from Seattle during the week and will investigate the needs of the local shipbuilding plants. In order to make it more convenient for the workmen to get to and from the various plants, Taylor may suggest that changes be made in the transportation facilities about the bay. He will also investigate the housing facilities and, if necessary, the corporation may assist in the work of constructing additional homes for the men.

The observance of Sunday as a day of rest, rather than one of work, in the shipyards, is encouraged by Vice-President Howard Coonley, Emergency Fleet Corporation, in a special order. The Vice-President says that work should not be done on Sunday except in cases of emergency or to complete special and necessary work, and the Corporation therefore expects the Sabbath to be as free from work as circumstances will reasonably permit. For such work as is performed on Sunday, the rates of pay authorized in the decisions of the Shipbuilding Labor Adjustment Board are to prevail.

During the past week Skinner & Eddy, Seattle shipbuilders, launched the thirtieth vessel from the ways of their No. 1 yard and the sixteenth direct contract ship for the Emergency Fleet. The vessel was the "West Lashaway," built in fifty-five working days from keel laying, bringing this plant's average hull construction time for the last ten ships to less than fifty-three days. The remaining four vessels of the original twenty contracted for by the Shipping Board are well under way, as are five hulls of the new contract for fifty ships, one of the latter being for the new type of 9600-ton vessel to be built by this plant.

The salmon pack for the season of 1918 will be bigger than that of a year ago, according to advices received during the past week, when one of the steamers belonging to the Bristol Bay Packing Company arrived at a Pacific Coast port with a full cargo of canned fish and 200 cannery hands. The salmon ran well and the ice jam of the early season failed to interfere with the business. During the voyage of the vessel down, one of the machinists on board committed suicide by cutting his throat and then leaping overboard. He had about $1300 coming, and this will be paid to his relatives. It was also reported that a Chinese and one other cannery hand committed suicide during the voyage north and at the cannery.

The division of operations of the United States Shipping Board has already commenced an investigation into the coal bunkering facilities of the Pacific Coast was announced during the week. Director of Operations John H. Rosseter has appointed James B. Smith, president of the King Coal Company, to conduct a special investigation into the conditions obtaining at Portland and Smith is now making a survey of the Columbia River district. Rosseter intends to create every possible facility for shipping that may be needed at all ports and especially on the Pacific Coast. The chief being thoroughly familiar with the local conditions and the needs of the shippers, in addition to the additional needs of the Government, is expected to have all of the local ports better prepared to handle the traffic problems than ever before. Before leaving for Washington Rosseter said that as time is the essence of all things maritime it is essential that every facility be provided for the fast dispatch of vessels in port. Coal bunkering is one of the prime essentials and in the past there have been certain delays at times owing to the lack of proper facilities at some of the ports. The new shipping chief of the biggest merchant fleet in the world said recently that if the program of handling vessels in the various ports can be facilitated a certain per cent. it would be equal to increasing the tonnage of the American mercantile marine.

Plans for the construction of San Francisco harbor improvements to cost more than $500,000 were approved by the Board of State Harbor Commissioners during the past week. The principal improvement consists of a huge pier to replace No. 1 immediately north of the Ferry building. Another is an extension to and rebuilding of pier 43 at the foot of Lombard street. Pier 1, which will be 600 feet long, 138 feet in width and covered with a fireproof shed, will be supported by a reinforced concrete substructure and will constitute a second unit of the twin river steamer terminal, which will be used by the California Transportaton Company and the California Navigation and Improvement Company. The pier will cost about $250,000, and the shed $150,000. Pier 43 when completed will be 650 feet long and 167 feet in width. It will be used as an open terminal for lumber and other freight and will prevent congestion along the water front at North Beach. Bids for both piers will be advertised for in the near future. Plans and specifications for a second story to the back portion of the postoffice at the ferry were approved and bids will be advertised for. The cost will be about $20,000. This improvement was made necessary on account of the increase in mail. Commissioner J. H. McCallum said that with the improvements now under construction and others contemplated there would be no question of the ability of the State to care for all the commerce that may come to the port. Present facilities are capable of handling a considerable volume of business in excess of that existing.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE

One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter.

Headquarters of the Sailors' Union of the Pacific, 59 Clay Street, San Francisco.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, SEPTEMBER 18, 1918.

THE QUESTIONNAIRE!

Thousands upon thousands of Seamen will soon be called upon to answer a series of questions propounded by the Provost Marshal General of the United States.

When the Questionnaire is received it is necessary to act promptly. The various local boards must have these replies to proceed with an intelligent application of the Selective Service Law and Regulations.

"Mariners actually employed in sea service" will be exempted as heretofore upon filing proper claim and proof of such service.

In addition to mariners "now actually employed as such" there are thousands upon thousands of former seamen in various shore occupations. It is of the utmost importance that all former seamen should furnish the local draft boards with full information upon their sea-going experience and qualifications.

Every man who has quit the sea but has served at sea a sufficient length of time to enable him at this time to qualify as able seaman, marine fireman, oiler or water-tender, marine cook, baker or butcher, should fully acquaint his draft board with such facts and data.

The proper manning of our rapidly growing Merchant Marine, but especially of the great fleet which is carrying supplies to Europe, is of the utmost importance to America and to the cause for which we are dedicating our man power.

Our country's resource in this respect, i. e., the number of seamen actually available for sea service, is likely to have a controlling influence on the future of all seamen and is, as already stated, of most serious importance in bringing the war to an early and successful conclusion.

The grandeur and greatness of a nation cannot rise above the average of its entire population, and nothing will ever bring America to the realization of its full possibilities except effective organization of all real workers; and this includes the men at the bottom of the industrial heap:—the "common," migratory, or unskilled laborers.

SEAMEN AND THE LIBERTY LOAN.

When the history of the great war is written, the first, last and middle chapters will have to deal at length with the grim courage, unfailing daring, keen resourcefulness which has marked the high heroism of American seamen.

Few suffered such quick misfortune as that steamship crew which recently sailed out of a French port in the morning and sailed back again that afternoon, on a destroyer which had rescued them from their torpedoed craft. Thousands, however, faced death a second or third time from ships sent down beneath them and wasted neither time nor thought in manning other ships when port was reached.

It is from these fresh proofs of the stamina of America's seafarers, though no proofs of its existence really were needed, that enthusiasm has mounted over the prospect of the American merchant flag's flying in every world port after the war. That our merchant marine was gaining no ground before the war was not the fault of our mariners, ship owners or merchants. American foreign trade was growing, but foreign bottoms were carrying our products.

Now the war has swept away the economic factors which prevented the rebirth of our once ample merchant marine. Nearly 900 ways in more than a hundred shipyards are working night and day to launch new ships, every one needed to carry on the war.

While every patriot in every allied country is straining every nerve to win the war, a thousand plans for the turning of our new merchant fleet into trade channels are slowly maturing.

Germany's plans have reached a more definite stage. Using no ships, except in the Baltic, to further her war ends, her merchant fleet held in port by allied supremacy on the sea, she is adding new merchant carriers in a score of shipyards. Recent dispatches from Amsterdam tell of the building of fleets of huge freighters and passenger liners, from 10,000 tons up to 20,000 and 25,000 tons. And there is no doubt that Germany is preparing to make as hard a fight to regain her markets as she ever did to wipe out the last man of the French and British armies and lay waste London and Paris like she did Belgium.

America's salvation lies in a fleet of ships which will leave no trade route open for German entry; a fleet which will make the American flag the most frequently met with on every sea; a fleet which will carry not only American goods, but the world's goods to every port.

American seamen will man these ships; American shipyards will turn them out; American money will pay for them.

Every American seafarer, from cabin boy to captain, can and must have a share in providing this money. A big share of the proceeds of the first three Liberty Loans has gone to American shipbuilders and American mariners. A bigger share of the fourth Liberty Loan will go to both, since the shipyards are now turning out more than 500,000 tons per month, and navigators must be provided for them.

In these days of war risk wages, there is no seafarer, from cabin boy to captain, who cannot take a proud share in making a success of the fourth Liberty Loan. The campaign opens September 28 and closes October 19, and in these three weeks America must roll up a more huge war fund than any one would have dreamed a few years could have been gathered by all the nations of the world.

Between six and eight BILLION dollars is called for.

This means that every man, woman and child in or of the United States, must buy Liberty Bonds to the last cent of his means. Excuses will not remove the menace of German competition after the war; sacrifices will.

Do not leave port before September 28 without having arranged to take your share of bonds.

THE PRESIDENT'S SOUND ADVICE.

The letter sent by President Wilson to the striking machinists and tool-makers in Bridgeport (Conn.) munition plants is a masterpiece of diction and compelling logic.

The Bridgeport workers struck because of dissatisfaction with the decision of an arbitrator chosen under an agreement with the International Union of Machinists. Referring to this breach of faith, the President says:

> If such disregard of the solemn adjudication of a tribunal to which both parties submitted their claims be temporized with, agreements become mere scraps of paper. If errors creep into awards, the proper remedy is submission to the award with an application for rehearing to the tribunal. But to strike against the award is disloyalty and dishonor.
>
> The Smith & Wesson Company of Springfield, engaged in Government work, has refused to accept the mediation of the National War Labor Board and has flaunted its refusal of the decision approved by Presidential proclamation. With my consent, the War Department has taken over the plant and business of the company to secure continuity in production and to prevent industrial disturbance.
>
> It is of the highest importance to secure compliance with reasonable rules and procedure for the settlement of industrial disputes. Having exercised a drastic remedy with recalcitrant employers, it is my duty to use means equally well adapted to that end with lawless and faithless employes.

Surely, this is language that leaves no doubt as to its meaning. And to the credit of the Bridgeport strikers it must be said that they promptly met the issue by returning to work and agreeing to take up their grievances in an orderly manner with the National War Labor Board.

During these epoch-making days America is, indeed, fortunate to have a man at the helm like President Wilson.

But American labor is doubly fortunate. Since Lincoln's days the White House has not been occupied by a more trusted guide, dependable counseler and truer friend to all who toil.

A NOTEWORTHY HEALTH RECORD.

How well Uncle Sam takes care of the young men who are in training for service in the new Merchant Marine is strikingly illustrated by statistical data just made public.

The health records on the Atlantic squadron of training ships maintained by the United States Shipping Board, show only one death among 8,500 men in a period of seven months, and a daily average sick rate of but one per cent.

The medical department of the Board's training service is in charge of Dr. William A. Brooks, a famous old-time Harvard rowing coach, now a noted Boston surgeon. Each of the ten training ships of that Board is equipped with a modern hospital, in charge of a doctor and a staff of trained male nurses. All applicants are subjected to two strict medical examinations, one at their home town and one at the training ship, before admission to the service.

PORT PERFORMANCES.

The importance of a cargo carrier's time record in port was never greater than at present. Having in mind this fact, the United States Shipping Board has announced that hereafter the port performances of the colliers in the New England coal carrying trade, the largest of all the coastwise trades of the United States, will be made the subject of semi-weekly announcements. During a recent week the port performances of the best colliers in that trade, compared with the average of all colliers in it, were as follows:

Loading ports—Baltimore, average of seven ships, 60 hours, 54 minutes in port. Best ship, "Tampico," 30 hours, 54 minutes in port. Norfolk and Newport News, average of 12 ships, 34 hours, 42 minutes in port. Best ship, "Bay View," 18 hours, 42 minutes in port.

Discharging ports—Boston, average of 21 ships, 116 hours, 30 minutes in port. Best ship, "Northern Queen," 49 hours, 54 minutes in port. Other discharge ports, average of 17 ships, 100 hours, 18 minutes in port. Best ship, "Bay State," at Providence, R. I., 42 hours, 6 minutes in port.

Ore carriers on the Lakes and lumber haulers on the Pacific Coast will please take notice!

The business of insuring American soldiers and sailors is scarcely a year old, and yet the Government has written more than $30,000,000,000 of insurance, insuring approximately three and a half million of soldiers and sailors. This gigantic business, employing 10,000 individuals and doing a greater business than the largest insurance company of the world, has all been organized in less than twelve months. Of late the bureau has been doing more than a billion dollar a week business; the total for the month of August will approximate $5,000,000,000 in new insurance. On one day 92,253 pieces of mail came to the bureau. It is a great work, an intricate work, a work that every American approves of. More than 90 per cent of the members of our military and naval forces are insured, and this insurance has strengthened the morale of our fighting men and brought comfort and courage to their dependents at home.

In order to greatly increase the production of salt-water fish and to make up for the loss in vessels and small producing units which American fisheries have suffered through the war and particularly by naval drafts, the Emergency Fleet Corporation, at the request of the United States Food Administration, will begin immediately the construction of a fleet of 75 deep-sea trawlers of the most modern type. These vessels, through arrangements with the fishing industry, will be put into operation early in 1919 on both the Atlantic and Pacific Coasts. Heavy increases in the annual production of haddock, small cod, flatfish, and other salt-water varieties will result, enabling carloads to enter all the interior markets of the country every week in the year. Stable prices will be maintained at low levels. Moreover, it is expected that the addition of the large catches of this fleet to the total fish supply of the Nation will effect a general lowering of prices on practically all varieties of both salt-water and fresh-water fish. Thus, both fish and fishermen will, to a greater measure than heretofore, help to win the war!

A RECOGNITION OF LEADERSHIP.

Frank P. Walsh Pays a Gracious But Well Deserved Tribute to Andrew Furuseth and Victor A. Olander.

The following striking passages are selected from the closing argument of Mr. Frank P. Walsh, made at Chicago recently, in behalf of the Stock Yard workers:

May it please your Honor: I never hear a speech made by an educated and clever man that I do not instinctively at the end try to gather the theme. We may forget the words, we may forget the line of argument, but if the man is one accustomed to dealing in facts and educated in logic the theme may always be found. I have sat here now for the actual day—during the period of the actual day for which we contend—eight hours, and I want to give your Honor the crystallization in my mind of what we call the "motif" or the theme of what has taken place here.

The organized packers of America, afraid or ashamed to come in person, with other voices and through other lips, have made an appeal to your Honor to keep industries safe for autocracy while the hosts of democracy are battling for freedom of mankind upon a thousand battlefields. And as I heard the discourse last night upon the subject of social discontent—somewhat modified this morning, but standing as a whole, of the dangers that would surround the body politic, aye, and even the lives of our people, if your Honor administered even-handed justice, I thought of a line of a speech made by a dead friend. He was not what might be called a radical; he was not strictly speaking a student of sociology, but in the combination of theology, philosophy and humanism, in my mind he had no peer during his life. He was the president—an early president—of the Detroit College, a great institution of learning founded by the Jesuit Fathers in Detroit, Michigan. He was the trustee of a fund of millions left by John E. Creighton, for the benefit of the Creighton University in Omaha. He was its first president and builder, and I heard him making this speech, not to a working class audience, not to a meeting of labor orzanizations, but at the laying of the cornerstone of Rockhurst College in Kansas City, where my four boys now attend school. He was speaking largely to the men through whose wealth the foundation was laid for what we expect and hope to be one of the great universities of this world, and he said: "Let private property—aye, let organized society beware of the day when the worker awakes to the realization that from the material standpoint he is as well off in prison as he is outside. Let them beware when the exploited worker finally understands that he will be warmer, better clothed, better nourished and less harassed in prison than he is outside."

And as the thought comes over me now, proceeding to discuss the testimony of another man, I think of a sentiment very much like it from a far off source, so far as social environment and education is concerned. Many here, your Honor, probably know Andrew Furuseth. I don't believe I exaggerate when I say that he has a deeper place in the hearts and affections of laboring men probably than any other labor man in the United States. He has as high a reputation for honesty as John Fitzpatrick and Ed Nockels, but he has a certain romantic atmosphere about him, due to the fight that he made for the Seamen's law, that I believe brings him closer to the hearts of the working people than even those men. For twenty years he gave battle to the shipping interests of the world at Washington to bring about better conditions for the men of his craft. During all those years he accepted nothing for compensation except the scale paid to an able seaman, under the scale made by his own union. When he left the halls of Congress, where he was respected by statesmen and administrators and all with whom he came in contact, it was to go to a lodging house along the Potomac River, so that his craft would not have to pay an excessive hotel bill while he was doing his work. During a strike in San Francisco a Federal judge issued an injunction against Andrew Furuseth, a part of the effect of which was to attempt to prevent him from making a speech to his fellows in a public place in the city of San Francisco. It appeared that he was going to disregard the injunction, and a reporter for a newspaper, who was interviewing him, asked him if he understood that there was a restraining order posted,—it not having been served upon Mr. Furuseth,—that prevented him from doing this act. Furuseth is a man from North country somewhere, probably from Norway, speaking in broken English, he said, "What if I do?" The reporter said, "If you do you will be sent to jail." "To jail? I never saw the inside of a jail, but I have heard about it. They say the quarters are very close and cramped. Very good. Mine have always been that way. They say the food is rough, and you get but little. I don't care. That has been my food all my life. They say you are locked in a cell, you are lonesome. That is nothing to me. I have always been lonesome."

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Sept. 10, 1918.
Regular weekly meeting came to order at 7 p. m., Frank Johnson presiding. Secretary reported shipping good. The following were elected delegates to the Nineteenth Annual Convention of the California State Federation of Labor, to meet at San Diego, Cal., on Oct. 7: E. A. Erickson, J. Faltus, F. Johnson, Harry Ohlson, Paul Scharrenberg, John H. Tennison.

Headquarters, San Francisco, Cal., Sept. 17, 1918.
Regular weekly meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping good. Shipwreck Benefit was awarded to a member of the crew of the Schooner "James H. Bruce."

JOHN H. TENNISON,
Secretary pro tem.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Sept. 13, 1918.
The regular weekly meeting was called to order at 3:00 p. m., Eugene Burke in the chair. Secretary reported shipping good. The meeting elected George Brown delegate to the coming convention of the California State Federation of Labor to be held in San Diego, Oct. 7, 1918.
EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, Sept. 5, 1918.
No meeting. Shipping good; men scarce.
LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Room 203. Phone Main 2233. P. O. Box 214.

San Pedro Agency, Sept. 4, 1918.
No meeting. No men ashore.
HARRY POTHOFF, Agent.
Sepulveda Bldg., 128½ Sixth Street. Phone, Home 115; Sunset 66 W.

DIED.

Anders Gustaf Jansson, No. 1683, a native of Sweden, age 46. Died on board S. S. "Juneau," at Valparaiso, Chile.

Andrew Jacobsen, No. 1796, a native of Denmark, age 39. Died at Seattle, Wash., Sept. 10, 1918.

Carl Curt Wetzel, No. 1038, a native of Germany, age 41. Died at Ukiah, Cal., Sept. 8, 1918.

The G. M. Standifer Construction Company, Vancouver, Wash., has completed construction of its new shipyard and work has been started on the first keel. The plant is equipped with five sets of ways. The company holds contracts for ten 9500-ton vessels.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

For the first time in American history the organized business men of the entire country have lined up against the organized farmers and livestock raisers of the country, as well as against the forces of organized labor, upon a great national issue. That issue is the taking over by the Federal Government of the big stockyards and the refrigerator and stock cars and the wholesale meat houses, in order to break the Chicago meat packers' monopoly.

Organized labor first made its fight to get decent working conditions for the workers in the packing plants. Then the Federal Trade Commission, backed by the labor movement and by all of the organizations of farmers and livestock growers, investigated the packing monopoly, and showed that the Big Five—Armour, Swift, Morris, Wilson and Cudahy—controlled over 70 per cent. of the meat in the United States, beside controlling butter, eggs, cheese, fish, cereals, and various other foods. The Commission showed that the combine had got a strangle-hold on the food business, not merely in the United States but for most of the Allied countries, and that its outrageous profits were due chiefly to the fact of its monopoly of the markets where livestock and meats must be sold. It proposed that Congress should smash the monopoly by taking away the private control of the markets.

Every farmer organization in America is enthusiastically backing this demand. Half a dozen Senators—Borah, Norris, Kenyon, Kendrick, Owen, Gore—have already spoken in support of the Federal Trade Commission's plan. But now comes the Chamber of Commerce of the United Statts, acting through its executive board, sending a letter to President Wilson denouncing the Commission and telling the President that the packers were given no chance to tell their side of the story. In this letter the Chamber declares that unless the President shall appoint, to the two existing vacancies in the Commission, men who are of the right training and temperament and character, nothing can restore confidence in that body.

Senators Smoot and Sherman, and a number of reactionaries in the House, have joined in the chorus with the Chamber of Commerce of the United States. The lines are drawn sharply. On the one side are the people who have been robbed by the packers—the stockmen, the dairymen and farmers, the stockyards employes and the rank and file of retail consumers of meat or of substitutes for meat. They want to get rid of one of the most ruthless exploiters in the whole world of commerce. On the other side are lined up the commercial and manufacturing powers, with their press and their lawyers and friends in influential positions. Congress appears just now to be in the hands of the packers' friends. But the farmer-labor side is only now beginning to start the battle.

* * *

News from Bridgeport is that the election of delegates to the industrial convention for the city has been held, and that the plan of industrial government set forth by the award of the National War Labor Board is to be carried through, regardless of the refusal of a small body of the men to stay at work pending the establishment of this new organization. At Schenectady, Pittsfield, Lynn, Waynesboro and at Bethlehem the same process is going forward or is now completed. Industrial government, based on equal and universal suffrage of all the workers in the plants, is rising upon the ruins of the old-style open-shop terrorism.

With tht enactment of the Man Power Act, there is more need than ever before for the putting of the war industries under representative democratic industrial control. Steps are now being taken to bring millions of additional women into the industries, to release the men for military duty. These women have no training in trade unionism. They would be helpless to defend their industrial rights against the individual employer who chose to impose upon them, if they did not come into a self-governing organization of the entire plant force, and if they did not learn at the outset, from Government spokesmen, that it was their duty to maintain the industrial decencies—equal pay for similar work, eight-hour day, the health and comfort minimum wage, and safeguards to health in the shop.

Hundreds of thousands of these women will be voting in the industrial elections in the munitions plants before they are gathered into the American Federation of Labor.

* * *

Basil M. Manly has joined the staff of the National War Labor Board, and is assisting in the work of Joint Chairman Walsh. Manly was chief of investigations under the Commission on Industrial Relations, of which Walsh was chairman, and prepared a large part of the famous report made by that body. He later joined the staff of the Federal Trades Commission as a special examiner in its investigation of the meat packers, and is understood to have had a great deal to do with the preparation of its report. He now returns to the field of industrial relations, in which there is no man in the country more capable as an investigator.

* * *

Director General of Railroads McAdoo has announced a wage increase for nearly half of the 2,000,000 men in the Railroad Service, upon recommendation of the Board of Railway Wages and Working Conditions. Clerks, station employes, common laborers in the shops, roundhouses, stations, storehouses and warehouses, stationary firemen, boiler washers, power transfer and turntable operators are covered by Supplement 7 to General Order 27. Supplement 8 covers maintenance of way employes, including workers on tracks, bridges, and buildings. The increase in pay averages about $25 a month, but the minimum wage is less than that set in any award of the National War Labor Board for other industries. The 8-hour day is established, but overtime up to 10 hours is paid pro rata, with time and a half for overtime beyond 10 hours.

The minimum rates paid for work in the Railroad Service are less than those paid in munition plants because railroad jobs are permanent, and because men are willing to take less money in order to avoid moving their families or going away from home. Gradually, the railroad workers anticipate, they will be able to get the same rate of pay as men in the manufacturing plants. They scarcely expect it while the war lasts.

* * *

While Representative Keating of Colorado is fighting for his political life, in his home district, against a combination of reactionaries, his bill establishing a minimum wage board for women and minors in the District of Columbia is to be taken up and probably passed by the Senate. The Senate has substituted the bill as it passed the House for the original bill offered in the Senate by Senator Trammell of Florida. The legislative committee of the A. F. of L. is supporting the measure, which is chiefly promoted by the Consumers' League and the Women's Trade Union League.

* * *

Not only has the British Trade Union Congress, to which Samuel Gompers and President Bowen of the Bricklayers' International Union were fraternal delegates, defeated by a large majority the resolution of J. Havelock Wilson calling for a five years' boycott against Germany after the war, but it has voted five to one against any change in the British policy of free trade with all the world. According to reports reaching Washington from the sessions at Derby, the British labor movement is unanimous in denouncing the barbarities practiced by the Germans in their submarine campaigns, but it refuses to believe that a boycott after the overthrow of the imperial system in Germany can do anything but harm to democracy in Europe.

By a big majority, again, the Congress repudiated Havelock Wilson's project for a Trade Union Party. It was considered that the British Labor Party was an adequate and suitable political expression of the ideals of British labor. Arthur Henderson, its dominant figure, was the real leader of the Trade Union Congress. He engaged in a good-naturtd exchange of views with Mr. Gompers on the occasion of the presenting of gifts to the American delegates. Mr. Gompers stated that in America the industrial ends of labor are kept separate from political ends. Mr. Henderson remarked that the industrial and political objectives of British labor went side by side, and that British labor was interested in international as well as national questions growing out of the war.

Neither side changed its attitude.

YOU ARE DOING IT.

Every time you read, you purchasers of Liberty Bonds and War Savings Stamps, of what the United States is doing in France in building wharves and railroads, or deluging the Germans with gas or shelling them out of position with big guns or shrapnel, or of bombing their arsenals or cities, or of the great work of our Army and our Navy, or of the building of ships here, or of any or all of the great or small achievements of America, here or abroad or on the seas, you buyers of Liberty Bonds and War Savings Stamps truthfully can say, "I had a hand in this"; "I contributed to this"; "I am helping do this"; "It is a part of my work."

About the least effective way of advocating any particular theory of reform is to cast discredit upon other theories.

THE OFFICIAL FACTS.

We have to-day, under contract or construction in the United States 819 shipbuilding ways. That, says Mr. Hurley, is twice as many ways as there are in all the other shipyards of the world combined.

We turned out in the month of May more steel ship tonnage than we produced in the whole year 1915. In the month of July we more than doubled the May output. In the first five months of 1918 we produced 336,900 tons more than in the two years 1915 and 1916. In the next two months of 1918 we more than equalled the output of the first five months. From August 1917 to August 1918 we placed in service a million and a half dead weight tons, of which more than half was built during the last three months of that period.

Of our 819 ways, 751 are for the building of cargo ships. At our present rate of production, by 1919 we should be continuously building on each way an average of 6000 tons of steel, wood and concrete ships. If we can average three ships per way in a year, we should turn out 13,500,000 tons in 1919. That is more than has been turned out by Great Britain herself in any five years of her history.

Our boats are not being built by private capital for private ownership. They are built by the United States Government. They will be controlled by the United States Shipping Board. They are being built by the people and they will be owned by the people.

We have to-day, 350,000 workers engaged in building merchant vessels in the shipyards and 200,000 in the iron works, steel mills, shops and factories making ship-building materials. A little more than a year ago this industry did not exist. Now it employs four times as many workers as the automobile industry employed at the time of the last census.

It has been created with practically no labor troubles. "In every dispute," says Chairman Hurley, "we have asked the men to be patient and to go on with the supreme task of building ships, trusting to Uncle Sam to set the matter right and they have responded." The men have voted to eliminate holidays and Saturday afternoons off. They have "speeded up riveting to such an extent that it has been necessary to safeguard the energy which they have been willing to pour out for the country."

The collier "Tuckahoe," of 5500 tons, was built in 27 days. The "West Lianga" was built in 78 days. Ten ships have been built in an average of 100 days each. The "Tuckahoe" has been carrying four cargoes of coal a month from Norfolk and Baltimore to Boston, instead of two cargoes a month which was the average previously.

In short to meet the submarine menace, we have established the greatest shipbuilding industry in the world, in a year, out of nothing. We are building ships faster than they have ever been built before. And those ships are proving themselves the most speedy and efficient of their class.

It is easy enough to arouse enthusiasm with a new idea, but not so easy to compel thought by the expression of an old truth.

The man in the dark follows the cry of "Progress" without really knowing whether it comes from ahead or from behind.

OUR ARMY'S HEALTH.

During the Mexican war, the annual death rate from disease among our troops was 100 men out of every thousand. During our Civil War, the rate was as high as 60 out of every thousand. During our Spanish-American war, it was 25 out of every thousand. Now the Surgeon General's office reports that among our troops at home and abroad, the annual death rate from disease fluctuates from less than 2 per thousand to slightly more than 3 per thousand.

This is an incredible record. The best of all previous performances was in the Russian-Japanese war, when the annual death rate from disease among the Japanese troops was 20 per thousand. Our present rate is about one-tenth of that. The annual death rate from disease among American men of military age in civil life is 6.7 per thousand. Our army rate is about one-third of that.

And the miracle has been achieved not by any one medical discovery or precaution, but by a campaign of administrative vigilance that has used every means to protect and promote and assure the health of millions of men.

At the outbreak of the war the most skillful physicians in America were drawn into service. The camps and cantonments were located by sanitary experts. The plans for the buildings were reviewed by civil medical boards after these plans had been passed by the army authorities. Neither local influence nor political pull was given any consideration in placing the camps or in building them.

A system of thorough inoculation against typhoid, malaria, and the so-called "water diseases," completely eliminated those infections that caused 85 per cent. of all the deaths from disease during our Spanish-American war. A similar campaign of prevention and of education was similarly successful against venereal diseases. When the recruits were first gathered together in the camps, the annual hospital admission rate for venereal diseases was as high as 400 out of every thousand men. Now, among our Expeditionary Forces in France, that rate is as low as 44 per thousand men. Among the recruits last winter, measles became epidemic, followed by pneumonia and empyema. Effective preventive measures have now been established against the spread of measles, and the medical department has ascertained the cause of empyema and found a successful method of treatment. At Fort Riley, Kansas, there were 85 cases of empyema under treatment from October 20 to January 29, and of these 52 died. From January 29 to April 30, there were 69 cases treated by the newly discovered method and only six died. That is to say, the most serious epidemic disease which the army had to combat last winter has now been overcome, and the danger of another such epidemic has been averted.

The man who is enjoined from doing a thing that is lawful may be depended upon to do that thing, if only as a means of vindicating the law.

The force of a truth may be better evidenced by the opposition than by the approval with which it is at first greeted.

TRANSPORTATION PROBLEMS.

Some of our national transportation problems and difficulties can be better understood when it is remembered that in the northeastern section of the United States, including New York, Pennsylvania, adjoining States, and New England, the population is 693 persons to every mile of railroad; in the South the figures are 407 persons per mile; and in the West, 252.

There are 15 square miles of land to every mile of railroad in the West, while in the East there is 1 mile of railroad to every 5 square miles of land. There are innumerable factories in this eastern theater, and the bringing in of coal and raw material and the carrying out of manufactured products make up a tremendous freight tonnage.

The Railroad Administration is solving gradually many problems. By the elimination of many unnecessary passenger trains several thousand engines are diverted from passenger to freight traffic, which relieves the situation materially. Also by loading the freight cars to full capacity a great saving is being accomplished. Routing freight by the most direct route, and other methods adopted by the Administration, are doing much to ease the strain on our transportation facilities.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

These boys will be called into the military service in camp when the year class to which they belong is called up.

At the discretion of the War Department scientific and technical students may be given an opportunity to complete scientific courses of direct military value. Others will be assigned to depot brigades of cantonments. Both the college and the vocational detachments will be watched for possible officer material.

Workers to be Tested for Physical Fitness.

Because of a scarcity of physicians the War Labor Policies Board recommends that a physical examination of workers, recruited by the United States Employment Service, be first tested in a few industrial centers "with a view to extending as the experiments made and the development of the employment service warrant."

The recommendation for physical examination of these workers is the result of a conference in New York, July 15 last, under the auspices of the sub-committee on welfare work, committee on labor, Council of National Defense, when it was resolved:

"The physical examination of workers is primarily a measure of health conservation and also essential to maximum production—a war necessity.

"That the purpose of a medical examination is not to eliminate the worker from industrial service, but to adapt him to the work he is physically fitted for."

In recommending that the examination of workers be one of the functions of the United States Employment Service, the conference favored the establishment of a central examination board composed of representatives of the workers, employers and the Government, and that this board issue examination cards indicating the health of the workers and classify them according to physical fitness.

This system, it is stated, is not intended to "prevent employers from maintaining their own system of physical examinations and follow-up methods for the purpose of conserving the health of their workers."

Necessary Workers Can Gain Exemption.

Provost Marshal General Crowder calls attention to that section of the new draft law which liberalizes deferred classification and permits district boards to include in such classification those men whose work is necessary to the Government in its present emergency.

The Provost Marshal General says:

"Bankers and persons engaged in other occupations and employments not heretofore regarded by district boards as warranting deferred classification on the ground of necessary industries, may now claim deferred classification on the ground that their work is necessary to the Nation in the present emergency.

"An amendment in the new man-power legislation recently passed, changed the provision: 'Persons engaged in industries, including agriculture,' so as to make it read: 'Persons engaged in industries, occupations or employments, including agriculture, found to be necessary to the maintenance of the military establishment or the effective operation of the military forces or the maintenance of national interest during the emergency.'

"The effect of this is to enable necessary persons in occupations or employments to make claims that they are engaged in occupations or employments that the district board may find necessary to the maintenance of the military establishment or to the maintenance of the national interest during the war.

"Thus, in other words, has been removed the danger of a too narrow construction of the word 'industries' which many district boards in the past have construed as excluding bankers, those engaged in commerce, and those engaged in various other occupations. Under the amendment, for example, district boards may find that certain men holding important positions in the Red Cross and kindred activities, or men enegaged in public health work, are engaged in occupations necessary to the maintenance of the military establishment or to the maintenance of the national interest, and, for that reason, are entitled to deferred classification.

"In making claims of the kind, the persons concerned may make use of those parts of the questionnaire relating to claims for deferred classification on the ground of being engaged in industries, including agriculture."

Miners Give Their Lives.

Miners are risking their lives to win this war, as well as the soldier boys at the front, says the Federal Bureau of Mines, in a report on the loyalty of America's coal diggers.

"In the year 1917, the last for which statistics are available, 2,696 miners gave up their lives while digging coal to win the war. Unfortunately the Government does not tabulate the casualties of the mines as it does of the soldiers. If the number of injuries could be shown, they would indicate that mining, perhaps, is as hazardous as war. Yet the miner goes about his work with the same enthusiasm and the same fearlessness as the boys 'over there,' and is surely doing his part toward winning the war," says the bureau.

"The lone miner in his working place, tearing the coal from its resting place, knows more coal means more guns, more ships, more munitions, and that these mean victory and the saving of the lives of their brothers who are fighting across the seas."

Dollar Power Shrinks.

Figures published by the Department of Labor show that the purchasing power of $1 in July, 1918, as compared with July, 1913, five years previous, has shrunk to 54 cents in Washington and Baltimore, 57 cents in Philadelphia, 59 cents in New York and Chicago, and 63 cents in San Francisco.

Stating this in another way, the increase in the cost of food during the five-year period was 85 per cent. in Washington, 84 per cent. in Baltimore, 77 per cent. in Philadelphia, 68 per cent. in New York, 69 per cent. in Chicago and 58 per cent. in San Francisco.

In the one-year period from July, 1917, to July, 1918, food advanced 22 per cent. in San Francisco, 21 per cent. in Washington and Philadelphia, 20 per cent. in Baltimore, 17 per cent. in New York and 11 per cent. in Chicago.

A RECOGNITION OF LEADERSHIP.

(Continued from Page 7.)

I thought of these words when I heard those gentlemen talking about the discontent that would come with the administration of justice in this arbitration proceeding. I thought of it when I heard that great bodies of other men would sink down on their knees, as I believe they will, and thank the living God that something happened, even if it was a war that destroyed other lives, that brought some meed of justice and some happiness into the lives of countless millions of people. Maybe I am wrong.

I thought of those words of Furuseth and Father Dowling again when I heard here this morning that if you elevated a man, if you gave him enough to eat, if you put him on a pedestal of manhood, that every child who came into the world is entitled to occupy, by making him economically independent, that he would become a recreant employe; that he would not furnish for the $5 wage which he received, if that was the amount fixed, the same meed of faithful service that he had faithfully given under the circumstances admitted by Mr. Churchill, when he was not getting enough to eat. I do not understand the causes of discontent if such things make for discontent.

And thinking of Furuseth naturally brings to my mind here another man, and I was thinking as I heard the argument of some of the lawyers here "What would Victor Olander think to-day if, in Washington, attending to the duties of this Government at great sacrifice, he heard that a lawyer was attempting to twist his splendid effort in behalf of leading your Honor's mind along the path of justice and the granting of the eight-hour day, to the confusion and the destruction of his own cause and his own people?"

He is a sailor like Furuseth. There is something in the occupation of a sailor that means a contemplative view of life and things, and conservative thought along all of the great departments of human activity and life, just as there is something in the trade of a horseshoer that makes a man fight against the elements, against the strength of the animal kingdom, and against the advances of exploiting tyrants like John Fitzpatrick has been fighting since last July for the people behind the yards.

The most awesome place in the world to me is on the shores of the Pacific Ocean on the California coast. I can stand on the Atlantic, close my eyes and vision myriads of great cities, the capitals of the world—a few days on an ocean greyhound and you are there. But I cannot imagine anything beyond the Pacific Ocean. I have stood there time and time again. I have looked at that beautiful sight, the sun going down over the western horizon, and I can think of nothing but infinity, but the omnipotent God, but of the great things that stir a man's soul when he is in the face of something so expansive and so full of meaning that all the petty things of life leave him. And maybe it is because those men, poorly fed, hard worked, if you will, sit on the deck of a boat for hours alone, lost in contemplation, that perhaps the beauties of the heavens or the terrifying phenomena, the hurricane, the play of the storm, perhaps, it is because they have the time to think between ports that brings to the surface intellects of the character of Andrew Furuseth and Victor Olander.

Victor Olander came here for a purpose, and I want to say that he discharged it with a fairness and with a fidelity and with an intellectuality that makes me prouder than ever to call him my friend, and to know that I have lived and worked in his time. He brought down and voiced, I say in two hours, the combined testimony of the sages who have studied the question of the eight-hour day, of the industrial administrators such as these gentlemen who have applied the eight-hour day; of the splendid, grateful, happy voices of the millions of people who are given a place in the good things of the world—the laborer, by the application of the eight-hour day. And he epitomized the thought that I tried to give you yesterday when he was asked the question, "Would you put in force the actual eight-hour day if it limited production and interfered with the war?" "Certainly not," he said. And that expression has been tried to be twisted against him in an effort, illogical, it is true, but in an effort nevertheless, to have your Honor misunderstood and misapply his testimony.

Commissioners Francis Krull and Thomas E. Hayden and Master in Chancery H. M. Wright of San Francisco have been appointed by Federal Judge M. T. Dooling to arbitrate the wage difficulties between the Shipowners and Merchants' Tugboat Company and the Marine Engineers' Beneficial Association, No. 35; Golden Gate Harbor, No. 40, of the American Masters, Mates and Pilots' Association. Thomas Crowley and William F. Humphrey, representing the shipowners, and Peter Hansen and Ernest F. Pogg the employes, have signed an agreement to abide by the decision of the arbitrators.

PROGRESS ABROAD.

The national trade-union federations of the three Scandinavian countries report a very noteworthy increase of their membership during the year 1917.

In Sweden the trade-union movement at the end of the year under review had a membership of 186,146, an increase of 45,334 (39.2 per cent.) over the preceding year. The female membership had increased from 8,238 to 14,402. The total increase of membership is distributed among a number of federations, among which those of the metal workers, sawmill workers, factory workers, transport and mercantile workers, tailors, bookbinders, and workers in communal employment show the largest increases. Accurate data as to the wage movements organized during the year under review are not yet available, but the total amount of the strike benefits paid by the trade-unions during 1917 is the largest since the general strike in 1909.

The National Central Federation of the Norwegian Trades-Union reports an increase of its membership during the past year by 14,000, the total membership being 93,000 in round numbers. Notwithstanding the fact that during 1917 the number of wage movements was very large—559, involving 65,000 workers—strike was resorted to in only 44 movements, affecting about 3,000 workers. The Central Federation's share in the strike benefits paid was 85,000 crowns ($22,780) as against 660,000 crowns ($176,880) in 1916. A very important movement brought about the introduction of eight-hour shifts in the paper, cellulose, and wood-pulp industries. In these industries 14,000 workers are now working under an eight-hour shift system. The building trades federations were able to conclude collective agreements in most of the large cities of the country. These agreements affected about 6,000 workmen.

The membership of the trade-unions affiliated with tht Danish National Federation increased in 1917 by 28,762 to a total of 179,284, of which 27,776 were female members. At the end of the year under review 53 federations with a total of 1,674 trade-unions, 208 of which were newly founded, were affiliated with the Central Federation. The report of the National Federation mentions negotiations with German trade-union leaders which took place to safeguard the interests of Danish workers going to Germany in quest of employment. It had become known that Danish workmen through false promises of German labor agents had been enticed to go to Germany. An agreement was reached that the activities of such labor agents in Denmark should cease and that the Danish trade-unions should act as employment agencies for those of their unemployed members who intended to seek work in Germany. The activities of the Danish trade unions in this respect never attained any importance and now have been discontinued entirely. The annual report of the federation also calls attention to a number of unauthorized strikes brought about by syndicalistic agitation. The employers obtained prosecution by the courts of the instigators of these strikes and seven labor organizations were fined in the total amount of 40,800 crowns ($10,934.40). Of this amount 32,000 crowns ($8,576) were paid by the shipyard workers' organization, which is not affiliated with the National Federation of Trade-Unions.

GERMAN SEAMEN'S WAGES.

Negotiations conducted in Hamburg between the organized seamen of Germany and the Central Association of German Shipowners as to further increases of war bonuses and overtime wages have recently been terminated with favorable results for the seamen.

The monthly war bonuses paid to seamen in addition to their basic wages have been increased as follows:

	FROM— Marks	TO— Marks
Apprentices	15 ($3.57)	20 ($ 4.76)
Ordinary seamen	25 ($5.95)	30 ($ 7.14)
Able-bod. seamen	40 ($9.52)	50 ($11.90)
Boatswains, carpenters, cooks..	40 ($9.52)	50 ($11.90)
Trimmers .....20-40 ($4.76-$9.52)		30-50 ($7.14-$11.90)
Firemen	40 ($9.52)	50 ($11.90)
Petty officers and machinists	40 ($9.52)	50 ($11.90)
Stewards .....20-40 ($4.76-$9.52)		30-50 ($7.14-$11.90)

Married seamen of all grades are to receive an additional monthly bonus of 10 marks ($2.38). Overtime wages, which hitherto varied between 50 and 60 pfennigs (11.9 and 14.3 cents) per hour, have been increased to 60 and 70 pfennigs (14.3 and 16.7 cents). These increases became effective on April 1, 1918, and are applicable to all parts of the North and Baltic Seas and all German navigation companies and seamen. Further negotiations with respect to questions of board, employment, and raising of the standards of qualification for crews are proposed to take place in the near future. The facts contained herein are translations from the Vorwarts, made for the U. S. Department of Labor Statistics.

PROUD OF THEIR JOBS.

The thousands of young men now entering the Merchant Marine through the training ships of the United States Shipping Board Recruiting Service are proud of their jobs, and properly so.

To them is given the task of bearing the flag on unarmed vessels through war-infested waters. The warrior in armor in the old days was proof against the spears of his enemy. The warrior afloat to-day in a swift and armored ship is so nearly proof against the skulking pirate of the sea, the German U-boat, that he gives his danger little thought.

The merchant sailor, on the other hand, goes unarmed in many instances, as along the American coast, where U-boats are now operating. This does not deter him from carrying out his appointed work in the war, and he does it with pride and without fear.

That this is so is proven every day, when young men go from the training ships aboard the merchant vessels on which they are to serve as sailors, firemen, cooks, coal-passers, or whatever their grade may be. Fear is not in them. They are glad to go, and the presence of the U-boats in coastal waters spurs them on, if anything.

This is the answer of the young men who enter the Merchant Marine to the slanders of enemies ashore, that they choose this service because it is non-combatant.—The Merchant Mariner, published by the United States Shipping Board Recruiting Service.

Labor News

General Manager Piez of the United States Shipping Board has notified district managers that it should be their particular business to assist in paying men back wages. "Our failure," he says, "to meet promptly and fully the conditions imposed by the Macy board is causing discontent and unrest among organized labor, and every possible step should immediately be taken to pay retroactive wages still due."

Officers of the International Brotherhood of Bookbinders report that the local at Franklin, Pa., has raised wages to $25 a week for male workers. Substantial increases have also been secured for bindery girls. Los Angeles has secured a rate of $24 for men and $12 for women; Winnipeg, $26 and $13, and New Orleans similar advances. The total membership of the international on August 10 was 15,928.

The management of the Bloomington (Ill.) Canning Company is explaining how a strike started among these unorganized workers. "It was all on account of a stranger, who accepted employment, started the trouble and then left the city," says the company officials. The company acknowledges that low wages are paid, but, of course, its employes were happy and contented until that stranger came in their midst.

The House of Representatives has passed the Keating Minimum Wage bill. The purposes of this legislation are defined as follows: "A bill to protect the lives and health and morals of women and minor workers in the District of Columbia and to establish a minimum wage board and define its powers and duties, and to provide for the fixing of minimum wages for such workers and for other purposes." The bill now goes to the Senate.

Attorneys for Thomas J. Mooney have announced that an appeal for a new trial will be carried to the United States Supreme Court. The appeal will be based on that section of the Federal Constitution which establishes the rights of citizens. The California State Supreme Court has twice refused to order a new trial on the ground that in criminal cases that are referred to it the law does not permit it to consider matter not contained in the record of the case. As irregularities in the conviction of Mooney were discovered after the trial was ended, the Court declines to order a new trial because the charges of irregularity are not in the record.

The "good old days," when employers had nothing to arbitrate, are gone, but George Steinle of Madison, Wis., is still living in the time when Coal Owner Baer announced that he and his kind held their property as a trust from the One above. Mr. Steinle is president of the Steinle Turret Lathe Company, and at a wage hearing before Government conciliators, it was developed that wage increases were offered employes if they would sign agreements not to join a trade union. In defense of this attitude Mr. Steinle testified: "I make the statement that before I will let the union tell me how to run my plant I will either tear or burn it down. That is my inherent right, just as it was my inherent right to start the plant. I lose my temper and I am proud of it. I never did anything in my life that I regret."

Home News

The Housing Bureau of the Department of Labor has awarded contracts for the construction of 1193 houses at Bethlehem, Pa., and 100 ready-cut houses at Seven Pines, Va.

The Chicago school board is planning to equip a 640-acre farm for practical training to supplement the farm-craft lessons given Chicago schoolboys by the Illinois division of the Boys' Working Reserve.

One American officer and ten to twenty men were killed in clash between American and Mexican forces in the border town of Nogales, Arizona. It is estimated that 100 were killed on the Mexican side of the border by fire from the American side.

Henry Ford, the Detroit manufacturer, candidate for nomination for United States Senator, in both the Republican and Democratic primaries in Michigan, was nominated on the Democratic ticket, but is defeated for the Republican nomination by Commander Truman H. Newberry, former Secretary of the Navy.

When the Dayton Wright Aeroplane Co., of Dayton, Ohio, turned out its thousandth aeroplane it developed that the 6,000 men at that plant are turning out more fighting planes than any two factories in England or France. The daily and monthly output exceeds the combined output of the largest factories in those two countries, according to unofficial statistics sent to the Department of Labor.

Mr. Benjamin C. Marsh, executive secretary of the American Committee on the High Cost of Living, in an argument before the Committee of the House of Representatives, recently, had this to say in favor of a measure providing for the public ownership of the coal mines, oil wells and other natural resources: "The main object is to reduce the cost of living, and we believe it can be done effectively and permanently only by Government ownership and operation of these natural resources."

Plans for the organization of a national federation of manufacturers' councils to meet war-time and after-the-war emergencies, have been announced by Warren C. King, president of the Manufacturers' Council of New Jersey, who states that the organization will be effected on the plan of the American Federation of Labor, embracing the principal of local organizations in all manufacturing communities, which will form State councils. These, in turn, will furnish representatives for the National body.

The Treasury Department urges liberty bond owners to have these bonds registered. Emphasis is placed upon the danger of loss from theft or destruction of the millions of bonds now outstanding. A relatively small percentage of bondholders have means for keeping them safely, and as a result the bonds are kept in the homes where they might be stolen or destroyed. A coupon bond is as negotiable as cash and any one can sell it. Once a bond is registered, however, this danger is eliminated and even though the bond is stolen or destroyed the original owner will receive the interest at regular intervals, and the principal in full at maturity of bond. The Treasury Department makes no charge for registering these bonds. Any bank will give full information.

Domestic and Naval

Merritt & Chapman have raised the N. Y. P. & N. car float No. 2, previously reported sunk at Norfolk by collision with a steamer.

Since the beginning of the war the losses of American vessels through enemy causes have been, up to the end of July, 1918, 117 vessels of 319,594 gross tons. The total loss of life on these vessels is 424. The tonnage sunk during the first seven months of this year is still 55,349 gross tons below the total for 1917, and the number of vessels is less than half last year's toll. The loss of life so far this year is little more than one-third that of 1917.

Universal Shipbuilding Co., Sturgeon Bay, Wis., has taken a contract to build three ocean-going tugs, 150 feet long, at a price of approximately $750,000, for the Emergency Fleet Corporation. The hulls will be of wood. The yards are being enlarged and equipped for the construction of steel vessels and a complete boiler and structural shop equipment has been acquired for transfer to Sturgeon Bay. In addition a small list of new equipment is being purchased.

From Cleveland it is reported that ore has been sent forward at a record rate during the past three months. Very little grain, it is said, will be shipped this season, and consequently the lake movement from Lake Michigan ports will be heavier than usual. The crop will be ready early. It is expected there will be a fair movement from ports at the head of the lakes the latter part of September. There will be tonnage to move it, it is stated, and the grain will be sent forward without delay.

The Leathem & Smith Co., Sturgeon Bay, Wis., has laid keels for three of the six 100-foot tugs which it has contracted to build for the Emergency Fleet Corporation, and will lay the remaining keels before the end of the present month. Delivery is specified by June 1, 1919, and three are to be ready for service by May 1, next. The company has purchased considerable used equipment and some new transmission, hoisting and other machinery. The contract now in hand amounts to $960,000.

The speed ship, "Tuckahoe," which was turned over to the Shipping Board ready for service in the record time of 37 days, continues to make fast time in the coal carrying trade between Hampton Roads and New England ports. Average number of round trips for colliers has been two a month, but the "Tuckahoe" is making four, and on her last trip to Boston went in and out of port and discharged a cargo of 5000 tons of coal within 31 hours. Average of 19 colliers discharging cargoes at Boston during the "Tuckahoe's" visit was 135 hours and 54 minutes.

The Shipping Board is reconstructing eleven lake ships for transatlantic service and one large lake ship for ocean coal carrying, making twelve in all. The eleven ships are undergoing such extensive reconstruction that it amounts almost to building new vessels. By this procedure, however, use is made of the existing hulls, engines and boilers which, when overhauled and repaired, will be nearly as good as new, as all damaged material is being taken out. In order not to interfere with new shipbuilding on the lakes, the vessels being reconstructed have been placed mostly in small repair yards.

News from Abroad

The Spanish Government is considering a scheme to organize the maritime service in Spain under Government control. It is intended to requisition all vessels for the transport of articles for national consumption.

The Chinese river steamers "Charles Hardouin" and "Paul Beau," each 1,671 tons gross, 909 tons net, built and engined by the Cie. Francaise de Nav., Nantes, in 1903 and both owned by the Canton Navigation Co., Canton, have been sold at Hongkong for $1,045,000 net, the purchasers paying an additional $260,000 for converting the boats into ocean steamers.

The destruction of the machinery on several German steamships interned in Chilean ports by their crews is being investigated by the Chilean Government. The authorities have directed that extraordinary vigilance be taken to prevent the Germans from sinking more vessels and the Government has announced that the Germans will be held responsible for the damage done.

Copenhagen reports that the American Ambassador has applied to the Minister of Foreign Affairs to bring an action against the Aftonblatt for an article in which President Wilson is characterized as "the Presbyterian war-god of the Democratic money mob," and in which it was said that the Entente both feared and despised America. The Minister of Justice has expressed his wish that the newspaper be prosecuted.

The British Government announces that two royal air force officers, with two air mechanics, have flown from England to Egypt, a direct distance of 2,000 miles. Spare parts for the machine were carried and few stops were made for gasoline. The machine used was of a type that has seen service at the front. It is declared that the trip "was in every respect a piece of routine work and not a matter of special designing or organizing."

Among the many important happenings of the past week the outstanding event was the brilliant victory of the Americans at the St. Mihiel salient. There is not space in which to record all its wonderful features, and what American but has devoured every line of last week's dispatches? The first blow by a united American Army under General Pershing, it swept through the Germans like wildfire. In less than two days, the whole salient was pinched off, the fighting line reduced by twenty-two miles, innumerable towns and villages were taken and with them about 20,000 prisoners. Berlin, in a screamingly funny dispatch, said the evacuation was carried out without interference—one wonders what would have happened had the Germans been interfered with. Americans have covered themselves with glory, and still greater glory lies ahead in the taking of Metz. America is now more than the hope—she is the reality of victory. Brilliant work was also done by the French and British, the latter bringing in 750 guns and 75,000 prisoners in four weeks. How hard the British fighting must have been is seen in a week's casualty list of 21,445. Altogether, the events of the week were a striking reply to the stalemate pessimists. No wonder the Kaiser and his cohorts are now squealing for peace.

With the Wits

"Have you got a second-hand car, as good as new, for about one-quarter what a new car would cost?"

"Yes'm, we've got just the one you want. It's being towed in now."—Life.

"There are some queer ways about building operations."

"How do you mean?"

"When a man wants to expand his building for business reasons he calls in a contractor."—Baltimore American.

"You men make a lot of work."

"What is the matter, love?"

"You keep me busy sewing buttons on your vest."

"Well, dear, you feed me so well," was the diplomatic husband's response.—Louisville Courier-Journal.

Remarkable Cure.—Doctor—Did that cure for deafness really help your brother?

Pat—Sure enough; he hadn't heard a sound for years, and the day after he took that medicine he heard from a friend in America.—New York American.

"Some of you men who play poker day and night ought to be taken for loafing."

"Playin' poker at Crimson Gulch," answered Three-finger Sam thoughtfully, "may be non-essential. But if you perteck your interests it ain't loafin'."—Washington Star.

"Now, who was it that was not glad when the prodigal son returned home?" asked the teacher, expecting to hear the reply, "The elder brother." Instantly a little hand went up, and the teacher asked: "Who was it, Tony?"

"It was the calf," came the confident answer.—Tit-Bits.

Sympathetic Old Lady (to convict)—Ah, my unfortunate friend, your fate is indeed a hard one; and, as she thinks of you here in this dreadful place, how your wife must suffer!

Convict (very much affected)—Yes'm, and there are two of 'em, mum. I'm here for bigamy.—Tid-Bits.

Children's Accounts

Your children should be taught to save. Open an account for each of them to-day. Show them by example that you believe in a savings account.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 3. SAN FRANCISCO, WEDNESDAY, SEPTEMBER 25, 1918. Whole No. 2505.

LIABILITY FOR SEAMEN'S INJURIES.

The Urgent Need for a National Seamen's Compensation Law.

Until such time as the Congress of the United States shall enact a general Federal compensation law for Seamen it is virtually impossible to make any clear-cut statements regarding a vessel's liability for injuries sustained by seamen.

However, since the decision of the United States Supreme Court in the case of Jensen vs. Southern Pacific, and the more recent decision by the Court of Appeals of the State of New York in the case of Clarence P. Howland vs. State Industrial Commission, there has been established a community of interest as to negligence actions between seamen, longshoremen and ship-repair men.

The courts have finally established that any work being performed pursuant to a maritime contract comes exclusively within the jurisdiction of the Admiralty law. It further decided that a longshoreman's contract to load a ship, is a maritime contract and a repair man's contract to repair a ship is a maritime contract; therefore employees of longshoremen or ship-repair men, working on board vessels pursuant to such contracts, are bound by the substantive Admiralty law as to their rights growing out of any accident while in the performance of their work.

There has been no decision yet on the new act of Congress which extends to all maritime workers the benefit of any Workmen's Compensation Act which might by its terms give them a remedy. It has been definitely decided, however, that the substantive principles of maritime law shall determine the rights of longshoremen, ship-repair men and seamen as to all accidents on board ship.

The Question of Maintenance and Cure.

It was held in the recent case of Fullford vs. Jay Street Terminal, by Judge Ward sitting in the District Court, which Attorney Silas Blake Axtell of New York brought to trial this summer, that a longshoreman whose hands were frostbitten while loading a ship with a hand truck during the winter months, was not entitled to maintenance and cure as a seaman, although his work was maritime.

The decision of the Supreme Court in the Jensen case and in the recent case of Chelentis vs. Luckenbach, which was carried to the Supreme Court by Mr. Axtell, established definitely that the substantive Admiralty law determines the rights of the parties. As to the remedy, the longshoreman or seaman or ship-repair man may proceed in the common law courts and have the benefit of common law remedies, to-wit, a jury trial.

In the decision of the United States Circuit Court of Appeals in this circuit in Chelentis vs. Luckenbach, Judge Ward in writing the opinion of the court, which was affirmed (with dissenting opinions) by the Supreme Court, held that a seaman might recover at common law for injuries sustained irrespective of contributory negligence on his part.

It has always been one of the main axioms of the common law, that in an action for tort, the plaintiff cannot recover unless he is shown to be free from contributory negligence. In Admiralty cases, the more equitable doctrine of averaging the damage in proportion with the negligence of the respective parties, was adopted in the case of Max Morris, 137 U. S. 1, a decision made about 1885 in the Southern District of New York by Judge Addison Brown and was affirmed by the Supreme Court of the United States.

A "Right" Given by Maritime Contract.

In the case of Holt vs. Cummings, 102 Pa. 212, an old common law suit, it was held that a seaman could maintain a suit at common law for maintenance and cure or board, lodging and doctor bills, a right given to him by his maritime contract. The decision of the Supreme Court in the Chelentis case, affirming the language of Judge Ward as to the change in the common law negligence rule, would seem to establish the provisions as to seamen at least, to be similar to the rule created by the language of the Federal Employees Liability Act which in its terms states that workmen may recover irrespective of contributory negligence and irrespective of the negligence of fellow servants as well.

Judge Sheppard in the case of Erickson vs. Roebling's Sons, tried in New York during the past month, charged the jury on that point particularly. The attorneys for the defendant took an exception and it is possible that the question will be reviewed in a higher court.

It was of course the contention of the plaintiff in the Chelentis case, that liability was created by Section 20 of the Seamen's Act through operation of the doctrine known as respondeat superior. In other words, the employer or principal is liable for the acts of his agent or employee done in his interest. Congress believed that the bar to recovery in the "Osceola" case, 189 U. S., was the fellow-servant rule and a complete investigation of all decisions rendered prior to the "Osceola" decision indicates that the fellow-servant rule was the bar to recovery in each instance and that Judge Brown in writing the opinion in the "Osceola" case merely stated what he thought to be the law.

The Supreme Court seems to have taken the view that by the "Osceola" decision the liability of ship-owners was limited and that the doctrine of respondeat superior ceased to operate.

Another Supreme Court Decision Necessary.

To many it would seem that the law on this particular point is becoming very much involved and that an appeal of a case like the Erickson one will be necessary before the situation will be finally clarified.

A more recent case which involves possibilities which may be important to seamen is that of Farrish vs. Mallory S. S. Co., which was tried in August before Judge Mack in the United States District Court. The plaintiff, a colored longshoreman, fell through the hatchway of the S. S. "Santiago" at Pier 36, North River, at about 7:40 a. m. before there was sufficient daylight in the hold to permit his seeing and before any light was provided by the company.

It appeared that the storekeeper who had the key to the lamp room had not come on the dock and did not come until after the accident. The plaintiff was ordered by one of the assistant superintendents to proceed with the work of getting the skids ready in the 'tween decks. While doing this work he fell through an open hatchway which was unguarded and unlighted. It appeared that he had not worked in the hold of this ship for nearly a year and that during that period the width of the 'tween deck hatch had been extended. He received no warning as to the change or that the hatch was open. He claimed it was so dark that he could not see. Over strenuous objection of counsel for the defendant that the place was reasonably safe and that the negligence, if any, was that of fellow-servants, the court sent the case to the jury.

Attorney Axtell of New York, has supplied the Journal with a copy of the charge of Judge Sheppard in the United States District Court, Southern District of New York, in the case (already referred to) of Erickson against John A. Roebling's Sons Company of New York.

This is a suit which was started on behalf of the plaintiff, Alec Erickson, a member of the Seamen's Union, shortly after the case of Chelentis against Luckenbach, which was subsequently taken to the Supreme Court of the United States. The action was commenced against Roebling's Sons Company, part owners of the schooner "Margaret Thurlow," at common law, and was brought to trial in the month of August, 1918, at New York.

Failure to Furnish Safe Appliances.

This case, in which the facts are stated in the charge to the jury which is reprinted herewith, is distinguishable from the Chelentis decision because in that case, the negligence was predicated upon a negligent act of the seaman in command in failing to give a proper order in the handling of the vessel. In the Erickson case there was a negligent order given, but the negligence was that of the master in failing to furnish and use proper and safe appliances. It is one of the duties of the owner to furnish a seaworthy vessel, safe appliances and equipment. The master is the owner's agent and responsible in the performance of this duty. He furnished to the workmen and directed that they use an appliance for the work which was unsafe, defective and worn out, causing the injury.

This case may be the open wedge to a broader statement of principles of Admiralty and common law, relating to torts on board ship, by our High Court. Mr. Axtell, who represented Erickson, believes that the judgment of Judge Sheppard will be sustained.

Following is the interesting and instructive charge to the jury made by Judge Sheppard in the Erickson case:

The Court (Sheppard, J.): "Gentlemen of the Jury, the case submitted to you and the one which you will try according to the testimony is the one made out in the plaintiff's petition or complaint in which he alleges certain injuries by reason of the negligence of the defendant Roebling & Sons. He charges in his petition, and that is what you are confined to, you can-

not go outside of the record and speculate upon what injuries he received or how those injuries were received, but you must look to his original declaration exclusively, and he sets forth in that that he was injured by reason of the negligence of the owners in supplying inadequate and defective apparatus for discharging the cargo of the vessel. That a certain block of wood or stick of wood by order of the master who was agent of the owners in the premises at the time was adopted as a means of bearing up or holding up the ends of the timber or logs which were at the time being removed from the hold and discharged upon the wharf at Ponce, Porto Rico.

"To that petition of the complaint the defendant denies all those allegations, that the master gave any such order that any such means by the consent or knowledge of the master or owners of the ship be used in the discharge of that vessel's cargo. So you have the plaintiff's case and the denial of that case as made by the defendant.

Negligence is Basis of Action.

"The basis of this action is negligence, negligence of the master, who was the agent of the owners in what? In supplying or furnishing insufficient and inadequate appliances for unloading the vessel, to-wit, a certain block or stick which was used or adopted at the time for the removal of the cargo from the hold out to the shore. Negligence is that doing of something at a time and under circumstances which a reasonably prudent person would not do, or leaving undone or not doing a thing at a time and under circumstances which a reasonably prudent person would do. And that you must find as the basis of the action of the plaintiff which would entitle him to recover in this case on negligence, and that definition of negligence applies as well to the plaintiff under the facts in this case as to the defendant, because, under the law as we conceive it as now adopted by the courts of this country in a case of this sort brought by a seaman against a vessel, the rule of contributory negligence is applicable to the plaintiff as it would be even though his suit was strictly in Admiralty or maritime courts. So consequently that rule of negligence applies to him as well as to the defendant.

"So in addressing your attention to the testimony in this case you are confined to the evidence. I may say to you that whatever verdict you find or do not find, you are not to give regard to any other case or to any opinions of law which counsel might entertain, or any views they may have expressed as to the opinions of other courts, but you are to take the law from this court, be it correct or incorrect. This is the forum that gives you the law that governs your deliberations upon the facts in this case.

"So you first address your attention to what caused the injury and whether or not it was a defective block or stick which was used and adopted at the time for the removal of the particular log which by some circumstances let slack in the chain which this plaintiff was controlling at the time that caught his finger and cut off his finger.

"Then you go further and ascertain whether or not if this block of wood was the cause of it, whether it was an article or a means supplied by the master, because the owners would not be responsible for the act of negligence in the hold or aboard ship except for that of the master in the supplying the stick, he being the agent of the owners at sea and competent in all matters to give directions and to supervise the control and conduct of the ship, just so the law makes the owners responsible for his acts. Therefore, if you find that it was the inadequate means of lifting the log out of the hold which caused the slack in the chain that caught the man's hand and cut off his finger, whether or not that was an article supplied by the master and whether or not it was the proximate cause of the injury, the inadequacy, the negligent manner of the operation of that thing was the proximate cause of the injury, or whether it was the carelessness of the plaintiff or the contributory negligence of the plaintiff which was the proximate cause of the injury.

Ascertaining the Facts in the Case.

"Then, if you find it was a negligent act under the circumstances, that this was an improvident way of unloading the vessel and that means was adopted by order of the master, then you will next inquire what part of the plaintiff's conduct, care or lack of care at the time entered into the act of the chain becoming slack and catching his hand.

"You have heard all the evidence. You have heard the testimony of the plaintiff and you have heard it corroborated by some other witnesses, that the master went into the hold and picked up this piece of wood and that he placed it in position and showed them how and demonstrated how it should be done with a view to facilitating the removal of the cargo from the hold.

"You will remember from the testimony that that is positively denied by the master, and there is also the testimony of other witnesses that corroborated the fact that the captain did not go into the hold, nor did he make any such demonstration or any such order. There is a conflict in the testimony which I will comment on a little later, but you remember the plaintiff's testimony which said that he was standing at the hatchway with an unobscured view into the hold and that he saw the master when he did this, when he picked up this piece of wood himself which he says broke under the strain and under the weight of the log which caused the slack in the chain to catch his hand. If he was looking at that and if he was an experienced seaman, and if that was something new and out of the ordinary and something unusual, then you will inquire whether he had the opportunity of seeing and knowing what was being done, and knowing that it was an unusual thing and that it was liable to cause the very thing to happen which did happen, and he went on and worked with that knowledge, then did he not contribute to his own injury? If you find that he was cognizant of the danger or knew that it was liable to do what it did do, and therefore he was negligent himself and that his negligence contributed to his injury, then you would take into consideration that negligence of his in ascertaining the amount which he would otherwise recover if he were not negligent himself. That is to say, you are confined in this case and in this action to a reparation to plaintiff for his loss, his pecuniary redress, for the loss of the use of that hand in the employment in which he was engaged at that time, his diminished earning capacity by reason of the injury, and the physical suffering that he endured in the hospital, and you are confined to that and that alone in this action as a matter of redress.

"Therefore you take that as the basis of what you consider would be his earning capacity of both hands and what you now consider is his diminished earning capacity with the loss of two or three fingers on the one hand, and then find what would compensate him for the number of years that he would have followed that vocation at the pay that he was getting, allowing him whatever he is likely to lose as a reduction of wages from what he would have got with both hands. And in addition to that such sum as you think would be adequate compensation for his physical suffering by reason of the pain and anguish that he suffered while in the hospital and while these operations were being performed. Then when you ascertain what that amount is, inquire how much did he contribute to the injury himself, and if his own negligence contributed 50 per cent., you will deduct from whatever you would allow him otherwise, 50 per cent., but if you find that his negligence was not equal to that of the defendant and was much less, then reduce the defendant's allowance from what you would have given him otherwise by whatever you think would be in proportion to his own negligence which contributed to his injury.

The Question of a Future Operation.

"Plaintiff would not be entitled to recover for any future operations that may be necessary upon his hand. He is confined in his recovery to the loss of the use of that hand as the means of earning a living, to his capacity of earning a livelihood and for his anguish and for his physical suffering. If the defendant sent him to a reputable hospital and provided hospital relief and physicians and surgeons and by reason of the negligence of the physicians or surgeons in that hospital he suffered otherwise and may have to undergo another operation does not enhance his damages; that was not in the contemplation of the owners as a consequence, if they were negligent, and according to the well-settled rule of law that would not be a consequence of the injury which the defendant would be bound to repay him for, and if there was any responsibility it would be that of the hospital or the surgeon who negligently operated on him and left him in that condition.

"So now in considering the testimony, you have, as I have intimated to you, a direct conflict between the master and the plaintiff himself. The master denies that he ever put any such operation into effect. He denies, I believe, if I heard his testimony, that he knew or had any knowledge that they were unloading the vessel with these sticks. There is some testimony that corroborates him. As against that you have the testimony of the plaintiff, who says that he was looking at the master when he put that stick up and got it out of the dunnage and brought it and set it up and some of the witnesses corroborate that, and told him that was a means which would facilitate getting the cargo out of the vessel. There are other conflicts in the testimony. It is the peculiar province of the jury to reconcile the conflict in the testimony of witnesses, if they can, with what they believe to be true in the light of what seems to them to be credible; and what you think from your own common sense and experience is the most probable and most reliable under the circumstances. If you cannot reconcile the conflict of the witnesses with what you believe to be true, then it is your province to discredit that which you think is unworthy of belief in the light of all the testimony, in the light of your own experience and your own common sense and accept that which seems most reasonable and most practicable and most probable and which corresponds more with your experience in everyday affairs and determine the case according to your own view of what you think is true under all the circumstances in the case. And when you thus arrive at your verdict by that standard you will find whatever you think will compensate the plaintiff as I have given you the law for his loss in the earning capacity which he otherwise would have had had he both hands.

"There is no evidence here as to what he paid the doctor or what he paid to hospitals; therefore, that is not any element of recovery, but the only matter that is submitted to you is that one question of what would compensate him for the loss of the use of that hand or the partial use of that hand, and for his physical and mental suffering during the time that he did suffer with the injuries and allow him a verdict for that amount, and, as I say, if you find that he contributed to his own injury so reduce that verdict in proportion to what you think his negligence contributed."

The jury, in its verdict, awarded twenty-five hundred dollars to the plaintiff, Alec Erickson.

STURDY STOCK.

(By Henry A. McAnarney.)

There have been more than 2,000,000 sturdy men between the ages of 21 and 31 withdrawn from productive industries in the last year—men whose positions cannot be filled by women. And these figures are for the United States alone. They do not take into account the limitation of the labor supply through the natural cessation of immigration, because of the amalgamation of the immigrant class with the fighting forces of Europe.

The United States must recoup the industrial deficit of the entire world—a herculean undertaking in normal times; titanic in the present day. Yet a task which the country faces with calm assurance of accomplishment.

The nation has faith in the loyalty, the patriotism and the capacity of its reserve working forces to overcome the gigantic barriers that obstruct the way. The time has come when that faith must be justified.

The nation's fighting forces have proved their mettle on the battlefield overseas; demonstrated it to the confusion of the sneering cynics at home; to the bewilderment of the Prussian military strategists—those superman mathematicians who riddled with diagrams and drivel, maps and mucilage, ink and idiocy, the plan of the United States to land an army of a million fighting men on European soil in fewer than five years.

Those "masters of the arts of war" had put it down in figures that this could not be done; every fact of history denied its possibility. They made merry over the mere suggestion. A contemptuous shrug of the shoulders dismissed the United States as a factor in the war.

But the United States did that—and more. In one year there were a million and a half Americans fighting on the Western front of France.

That was a triumphant thrusting aside of "facts and figures," and a new scale for guiding scientific calculation. A successful climax to a stupendous undertaking.

Now the working men and women of the country are called upon to duplicate in the field of industry the valor and the courage that our troops have shown on the field of battle.

Our workers are courageous. They know that the war must be won. They realize that their forces of will and their indomitable determination, are the guardians of universal liberty. They are confronted by the supreme obligation of supporting our magnificent fighting forces overseas with munitions and supplies of war, of feeding the nation's Allies, of keeping the whole machinery of life in motion.

Shall they fulfill that supreme obligation voluntarily and vigorously?

They shall; for they come of the sturdy stock that stand by their guns when their country calls.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Government vs. Private Control.

Untangling a freight blockade of 180,000 loaded cars on Eastern lines was the first work of the United States Railroad Administration, says Director General of Railroads McAdoo in a report to the President on things accomplished in seven months of Government-controlled railroads. The report indicates that the Director General believes he and his associates have brought order out of chaos at a most critical period of the nation's life and he rightfully proclaims this fact.

Other features of the report include surprising economies affected while efficiency has been developed to a high degree. This efficiency is indicated by the statement that the northerly trunk lines are used for through trains between the Chicago district and the East, thereby releasing the more southerly trunk lines to handle the traffic that originates in the Pittsburgh district, where "congestion of local and through freight in the past has created some of the most costly and exasperating blockades that have been known in the history of American railroads."

The Director General says that as "no man can serve two masters" the presidents and other officers of the railroad companies were released and their places filled by officials directly responsible to the Director General. This leaves the presidents free to protect the interests of stockholders and owners.

Under private control of the railroads 2,325 officers, drawing salaries of $5,000 a year or over, were employed, with aggregate salaries of $21,320,187. Under Government control 1,925 officials (a reduction of 400) are doing the same work, and the aggregate of their salaries is $16,705,298—an annual saving of $4,614,889. This includes the officers of the regional districts as well as the central administration in Washington, except the Director General himself, who receives no salary.

Under private control salaries as high as $100,000 a year were paid. Now the highest salaries are paid to the regional directors (of whom there are but seven), and these range from $40,000 to $50,000 a year.

The expenses of law departments have been reduced about $1,500,000 annually without impairing the efficiency.

Competition has been abandoned and the consolidation of ticket and freight offices has saved over $16,000,000. Discontinuance of advertising has effected another saving of $7,000,000.

Many unnecessary passenger trains have been eliminated. In the territory west of Chicago, and the Mississippi River passenger trains traversing an aggregate of 21,000,000 miles a year have been done away with, and in the Eastern district the saving approximates 26,500,000 miles annually. Other unnecessary trains are being annulled, the hauling of special trains and needless private cars has been discontinued and through travel is being directed to the natural routes. Now tickets are good on any route that directly reaches the point desired.

The same policy is being applied as rapidly as possible in the consolidation of freight terminals, with a saving of switching costs that will permit of the more rapid loading and unloading of freight cars.

The Director General shows that freight traffic from Los Angeles to Dallas and Fort Worth has been shortened over 500 miles because routing via the Southern Pacific Railroad has been abandoned. Oil shipped from the Casper, Wyo., fields to Montana and Washington points is routed 880 miles shorter, and a new route between Kansas City and Galveston has been developed which is 280 miles shorter than the 1,121 miles previously traversed. These instances indicate what is being done to shorten hauls and make possible the more intensive employment of both rolling stock and equipment.

To further illustrate the terrific waste under private control, the Director General says that during a period of about 60 days some 8,999 cars were re-routed in a certain Western territory so as to effect a saving in the mileage traveled by each car of 195 miles, equal to a total of 1,754,805 car miles.

Urge Control of Packers.

The farmers' national committee on packing plants and national industries has asked President Wilson to take over the various facilities of the meat packers named in the recent report of the Federal Trade Commission.

"It is our opinion," the farmers say, "that the recommendations made by the commission are peculiarly wise and timely, and that if enacted into law so as to be permanent in effect they will break down the monopolistic tendencies, open up a field of fair competition, correct most of the abuses of which we complain as producers, and lead to economies in production, shipment and treatment of livestock and meat products that will secure benefits to the consumers.

"Certainly the stock yards, the private cars and the distributing centers for meat cannot be considered as other than distributing facilities in connection with the railroads. The logic of the situation is obvious and in our opinion the assumption by the railroads of their proper terminal functions will prove the remedy that we earnestly desire."

No Chinese Needed to Save Wheat Crop.

The United States Employment Service reports that workers within the western wheat States provided all the labor used in gathering the wheat harvest this summer.

This announcement shatters the doleful predictions of advocates of Chinese immigration, who talked of importing a million Orientals to save the wheat from certain destruction.

Of the farm workers engaged, over 18,000 or more than one-half of the total number of emergency workers, were placed on the farms and directed by the employment service.

That the harvest should have been accomplished entirely by local effort is proof what organization and local enterprise can

World's Workers

The recent legislative assembly of the Province of British Columbia enacted a law establishing a minimum wage board to ascertain the wages paid to women in the Province, and, if after investigation it appears that inadequate wages are being paid in any occupation, trade, or industry, to call a conference for the purpose of determining what is a suitable wage and to establish and enforce the same. The board is to serve without pay, and to hold office during the pleasure of the lieutenant-governor, who also makes the appointments. One of the three members is to be a woman, and the deputy minister of labor is to be a member ex-officio and chairman of the board.

Nova Scotia trade unionists have given notice that they will oppose the importation of Chinese labor into the Cape Breton mines. Government officials who favor this plan are advised to visit the mines instead of relying on second-hand information. It is shown that there are between 100,000 and 200,000 tons of coal banked at the mines. Formerly this coal has been cleared away in the summer, but because of lack of transportation it is now menaced by the danger of combustion. If the present pile is not removed, the unionists say, the outlook is that the mines will have to close down this winter, and instead of discussing the importation of Chinese, officals will have an out-of-work problem to keep them busy.

On December 8, 1917, the Federation of the German Building Trades Workers made an investigation of the wages of its members. The investigation included 90,000 workmen and covered all Germany. The results showed that at the time of the investigation the average hourly wage rate of masons was 95.7 pfennigs (22.8 cents) and that of helpers 85 pfennigs (20.2 cents), representing an average increase of 87.6 and 88.9 per cent., respectively, over the pre-war wage rates. The average hourly wage rate of excavation laborers was found to be 82.5 pfennigs (19.6 cents), that of cement workers 103.7 pfennigs (24.7 cents), of plasterers 140.6 pfennigs (33.5 cents), and of stone-floor layers and terrazzo workers 144.4 pfennigs (34.4 cents).

The May (1918) number of the Szakszervezeti Ertesito, the official organ of the Hungarian trade-unions, contains the statement that in 1917 the number of organized workers in Hungary increased to 215,222. Before the outbreak of the war the Hungarian trade-unions had a membership of 107,486. The drafting of members into military service reduced the membership to 43,381 at the end of 1915. This crisis was overcome in 1916, during which year the membership increased to 55,338. In the past year, however, this number has been nearly quadrupled. The great propaganda work of the Hungarian trade-unions dates back to the peace demonstration on May 1, 1917. If it is considered that industry and legal protection of the right of coalition are equally undeveloped in Hungary, the rapid progress of the Hungarian trade-union movement becomes particularly noteworthy. Of the 215,222 organized workers 166,411 were men and 48,811 were women. The number of female trade-union members is nearly five times as large as in pre-war times.

They're in to Win

Fair targets, every one of these men, for the German riflemen and machine gunners hidden behind the parapet.

But they are not thinking of the bullets whizzing past them; of the shells bursting over their heads.

They are intent on one thing—to scale that bank, take the bridge head and ***win the day.***

And these men are made of the same stuff as all true Americans who read these words.

If we are the same stuff, let us prove it. Let us get into the fight as they do—to the limit—for Victory!

Pacific Coast Marine.

A total of $50,000 has been subscribed by business men of Everett, Wash., to establish the Hyde Wooden Shipyards near that city.

The Pacific Marine Iron Works, Portland, Ore., has leased a large site near the Morrison Street Bridge, which will be equipped as a fitting out dock for vessels now under construction. Three slips, each 112 by 312 feet, will be built.

The alien enemy inspection detail of the Navy is making a vigorous warfare against slackers on the water front, who exist by virtue of their panhandling methods. The officials say there is no excuse for men of sturdy physical condition to live on homeward-bounders and all will be rounded up and given an opportunity to work or enter military service.

The United States Shipping Board is planning for the construction of a drydock at San Pedro Harbor, Los Angeles, which, it is understood, will be used for repairing vessels in connection with the plants of the Southwestern Shipbuilding Co. and the Los Angeles Shipbuilding & Dry Dock Co. An appropriation of $204,000 has been made for the dredging of a dry dock channel at the harbor and $130,350 for a connecting channel to facilitate operation.

The "Georgina Rolph" of the Rolph fleet has been towed to San Francisco and is now being equipped with machinery at the Alameda plant of the Bethlehem Steel Corporation. Captain I. N. Carlsen, who has charge of the installation on all of the ships of the Rolph concern, said the "Georgina" would be a coal-burner. All of the other vessels have been fitted to burn oil.

A syndicate in which George Watson of Victoria, B. C., is manager, will build a floating drydock to be constructed in sections so that additional sections may be added.

A number of Eastern business men were at South Bend, Wash., recently, looking over the plant of the South Bend Shipyard Co. They were favorably impressed with the location of the site and consider it one of the best on the coast. A movement is on foot for the consolidation of the Kleeb Lumber Co. and the Willapa Harbor Iron Works with the shipyard plant. The first keel at the shipyard plant was recently laid. The ship to be built will be 250 feet long, 43 feet beam and 22 feet depth of hold. It will be of the American auxiliary schooner type.

One of the sailing ships owned by the Alaska Packers' Association and commandeered by the United States Shipping Board went ashore near Katsura Chiba, on the coast of Japan, September 17, according to a cablegram received at San Francisco. Captain Larsen and his crew, except one man, were taken ashore. The advices did not state whether the sailor was left on board on purpose or was lost. The ship sailed from Manila for this port July 15 and is supposed to have encountered a typhoon. At last reports it was hoped that aid will arrive in time to save both ship and cargo. The latter is valued at more than $1,000,000 and consists of hemp, coconut oil and other Oriental goods.

The new Liberty plant of the Bethlehem Shipbuilding Corporation at Alameda, Cal., when completed, will be one of the largest shipyards in the United States. It will be twice the size of the Victory plant of the Bethlehem Shipbuilding Corporation at Squantum, Mass., and will involve twice the expenditure. The plant, which will have ten shipways, will cover more than a third of a square mile and from 3,000,000 to 4,000,000 yds. of dredging will be necessary. Large vessels will be built, contracts for which have already been awarded by the United States Shipping Board. Contract for the construction of the plant was awarded to the Aberthaw Construction Co., Boston, which recently completed the Victory plant in record time.

To meet the increasing demands for coal for steam and domestic purposes, the plant of the King Coal Company at Oakland, Cal., adjoining the big plant of the Moore Shipbuilding Company, is being expanded to bring up its coal handling capacity from 2000 to 4000 tons a day. Modern appliances are being installed for the rapid unloading of the cars of coal as they arrive from Utah. The company handled 50,000 tons of coal in August, an increase of 10,000 tons over July, and indications are fully 60,000 tons will be handled this month. President James B. Smith and Consulting Engineer I. S. Rosener of the coal company were at the plant recently superintending the improvements. Rosener is also consulting engineer of the Moore Shipbuilding Company.

That surplus of sugar at Hawaiian ports is a thing of the past was the official announcement made by the Matson Navigation Company. Captain Peter Johnson, now assisting Port Captain Charles W. Saunders, said that all of the sugar that was heaped up and waiting for shipment has been loaded into the ships, and the only sugar now remaining in Hawaii is that not crushed from the cane. There will be about 100,000 tons more of this and the crush will not conclude until about the first of the year. Meantime, the fleet will be used to bring the canned pineapples to the mainland and also the few bananas. The shipping situation between the mainland and Hawaii is now satisfactory to all concerned, with the exception of the passenger travel. There is no indication that travelers will be permitted to go and come at will for a long time.

The Pacific Steamship Company will extend the preparations for exploiting American trade to the Orient, according to advices received from Seattle at the San Francisco office. General Manager A. F. Haines announced that R. D. Pinneo, now New York agent, will leave for the Orient soon for the purpose of making the initial arrangements for extending the activities of the company to the Far East. Pinneo will be accompanied by John J. Gorman, chief clerk of the Dodwell Company at Seattle, and well known at San Francisco. Gorman has resigned from Dodwell. He is conversant with trade conditions with the Orient, for he has handled this class of business for many years, and is recognized as an authority by the local shippers. Hugh Gallagher, who recently left San Francisco to work in the Seattle office, will succeed Pinneo as New York agent. The recent changes installed in the organization of the company indicate that Haines and Alexander are expecting to cut deeply into the Oriental business. It is not known how much of this ship operation will be handled from San Francisco, but it is expected that a considerable portion will be shifted to the California ports.

American boys who desire to learn the science of navigation on a real wind-jammer will soon have an opportunity to gratify this desire on the Pacific Coast, according to the announcement of Henry Fortmann, president of the Alaska Packers' Association. Modern seamanship is to be taught young Americans on board all ships of the Fortmann concern that can be released for service at the close of the salmon season. Fortmann said he had tendered the free use of the vessels to the Government for this purpose, and details of the plan are being worked out by Government officials. Owing to the heavy damage suffered by the fleet in the early summer, when many vessels were caught in the ice jam off the Alaskan coast, it is not known how many of the ships can be used, but three have already been designated to make off-shore passages from Pacific Coast ports. The plan is to place quite a number of students or apprentices on each craft, with instructors, and it is believed that after a single voyage the recruits will be fitted to ship on other vessels as ordinary seamen. "The company has no desire to make a profit," said Fortmann, "and we have made the tender without money expectations."

The expedition sent to the South Seas to salve the British ship "County of Roxburg" has been abandoned, according to information received from Tahiti. The information was to the effect that the steamer sent from San Francisco under command of Theodore Wicks, deep sea diver, is now at the Tahitian port and that the salving equipment is being sold there. The abandonment of the venture will result in the loss of something like $100,000 to San Franciscans, it is reported. The vessel was wrecked twelve years ago and was thrown high and dry upon the beach of a small island. An investigation made about a year ago assured Edward A. Christensen and his associates that the vessel could be saved by the novel method of raising the craft like a house on land, building ship ways just as is done before the keel is laid at a shipyard, and then launching the vessel. It is reported that when the wrecking vessel arrived at the scene an investigation proved that the entire scheme was not practicable and it was decided to mark down the money invested to the column of experience and get what salvage was possible by disposing of the gear at Tahiti. The projectors of the scheme had previously salved a German steamer sunk in the harbor at Tahiti and a large sum of money had been gained. It had also been intended to salve the German raider "Seeadler" but it is understood that this venture will also be thrown into the discard.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S Jones and Mr. Arthur Lavenburg. The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE

One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter.
Acceptance for mailing at special rate of postage provided for in Section 1103. Act of October 3, 1917, authorized September 7, 1918.

Headquarters of the Sailors' Union of the Pacific, 59 Clay Street, San Francisco.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, SEPTEMBER 25, 1918.

"YOUR" PART IN THE DRIVE.

On another page of this issue will be found the second of a series of Fourth Liberty Loan advertisements inserted, free of charge, as a patriotic contribution to the great home "drive" which begins on Saturday, September 28.

Preparatory to our home "drive" no more pleasant surprise could have been given the appetite of America and her allies, sharpened to the taste of victory by the recent tremendous successes in France, than the news that American man power is greatly in excess of estimates.

Where a registration of 12,800,000 men had been prepared for under the new 18 to 45 regulations returns indicated that 14,000,000 men had added themselves potentially to the American army.

All German evasion of the threat of America's enormous army in Europe must cease in the face of these returns. The German camouflage of utter disregard for America's "untrained" forces in the field lasted but a short time, and deceived few of the Kaiser's credulous subjects while it lasted.

The untamable courage of American sailors and soldiers, revealed at a score of places at sea and ashore, made it easily understandable why Ludendorff should fall back to the Hindenburg line. The enormous reservoir of waiting fighters from which Foch can draw must give the German General Staff good grounds to worry as to whether the retreat can be halted at the Rhine.

Another factor just as depressing to German morale is the threat of America's inexhaustible financial resources.

The feat of the United States in raising either six or eight billions for war purposes in the three weeks between September 28 and October 19 will so far surpass anything Germany has been able to do in war finance as to seem to the German mind more a bad dream than a stern reality.

The Fourth Liberty Loan will be raised in those three weeks, whether Secretary McAdoo's call is for six or eight billion dollars. The fighting temper of the United States guarantees the unqualified success of this drive. Civilian Americans will never fail to back up its fighting sons abroad.

FUNDAMENTALS OF PEACE.

Of more than ordinary significance is the reported acceptance of the proposals presented by the American delegates to the interallied Labor and Socialist conference just held at London. In brief, the Americans requested the conference to indorse the fourteen points laid down by President Wilson as the conditions on which peace may be established and maintained.

The American proposals declare it to be "our unqualified determination to do all that lies in our power to assist our allied countries in marshaling all their resources to the end that the armed forces of the Central Powers may be driven from the soil of the nations which they have invaded and now occupy, and that these armed forces shall be opposed so long as they carry out orders and respond to the control of the militaristic and autocratic governments of the Central Powers, which now threaten the existence of all self-governing peoples."

The fundamental principles which must underlie the peace treaty were declared by the American delegates to be as follows:

A league of free peoples of the world in a common covenant for genuine and practical cooperation to secure justice and therefore peace in the relations between the nations.

No political or economic restrictions meant to benefit some nations that would cripple or embarrass others.

No indemnities nor reprisals based upon vindictive purposes or a deliberate desire to injure, but to right manifest wrongs.

The recognition of the rights of small nations and the principle that "no people must be forced under a sovereignty under which it does not wish to live."

No territorial changes or adjustment of power except in the furtherance of the welfare of the peoples affected and in the furtherance of world peace.

The American proposals assert that the following basic principles should also be incorporated in the treaty of peace:

In law and in practice the principle shall be recognized that the labor of a human being is not a commodity or an article of commerce.

Involuntary servitude shall not exist except as punishment for crime for which the party shall have been duly convicted.

The right of free association, free assemblage, free speech and free press shall not be abridged.

Seamen of the merchant marine shall be guaranteed the right to leave their vessels when they are in a safe harbor.

No article or commodity shall be shipped or delivered in international commerce in the production of which children under 16 years of age have been employed or permitted to work.

The basic workday in industry and commerce shall not exceed eight hours.

Trial by jury shall be established.

Finally, the American proposals favor a world labor congress at the same time and place as the peace conference, and also direct official representation of workers in the official delegations of each of the belligerents formulating the peace treaty.

The seafaring people are, of course, particularly concerned in the basic principle relating to the right to quit their vessels when in a safe harbor. Through the Seamen's law of 1915, American seamen have already won that priceless privilege and the organized toilers of the sea in our allied maritime countries have from time to time petitioned their respective Parliaments for the enactment of similar laws.

Not so, however, with the organized German seamen. And certainly not with their officials. A little more than nine years ago, i. e., in the issue of June 2, 1909, the JOURNAL took to task the chief executive of the German Seamen's Union because he was openly and brazenly opposing a change in the Seamen's legal status, from virtual slavery to freedom. In other words he deemed it improper to place merchant seamen on an equal footing with other citizens, by giving them the right to quit when their vessel is in a safe harbor.

In the light of later developments this strange attitude of the German Seamen's Union official is truly enlightening. And in order that there may be no misunderstanding upon this amazing state of mind of German seamen the battle of words which was waged between this paper and the German Seamen's official organ "Der Seemann" is published in full elsewhere in this issue under the caption "The Right To Quit."

Whether or not the German Seamen's Union has had a change of heart upon this subject remains to be seen. It surely would be an extraordinary state of affairs if a representative of the organized German seamen should appeal to the peace conference not to force freedom upon them. Yet, judging by the events of the past, this is not only possible, but highly probable.

As for the organized seamen in the Allied nations it need scarcely be said that they will be a unit for the American proposal to place merchant seamen upon the same footing as other citizens.

The deluded German seamen need not fear that liberty is to be thrust down their throats, for—

Hereditary bondsmen, know ye not
Who would be free themselves must strike the blow?

THE "LUSITANIA" VERDICT.

The judgment delivered by Judge Mayer of the Federal District Court (Second District, New York) in the case of the damage suits brought against the Cunard Steamship Co., Limited, by various claimants on account of the loss of the "Lusitania," as a result of a German submarine attack, is a historic document, but too lengthy for publication in the JOURNAL.

The principal points made in the judgment relieving the shipowners from liability in respect of the loss of that vessel are:

Where an enemy merchant ship was the victim of an attack which was deliberate, long-contemplated and intended ruthlessly to destroy human life, as well as property, it is idle and purely speculative to say that the captain of the ship in doing or not doing something or in taking one course and not another was a contributory cause of the disaster.

The act of a submarine commander in attacking an enemy unarmed passenger-carrying merchantman without previous request to submit to visit is an illegal act, and even if negligence were shown on the part of the captain of the merchantman, such negligence cannot be the proximate cause of the loss or damage if an independent illegal act of a third party intervenes to cause the loss.

Where advertisements appeared in newspapers on the same day upon which an enemy merchantman set sail from a neutral port warning travelers of the dangers of sailing upon enemy ships, the owner and master of the merchantman were justified in believing that the simple, humane and universally accepted principle of

providing for the safety of all persons on board and their effects before destroying a vessel would not be violated, and that the warning advertisements were hardly to be construed as calling attention to more than the perils to be expected from quick disembarkation and the possible rigors of the sea after the proper safeguarding of the lives of passengers by at least full opportunity to take to the boats.

In denying recovery from the Cunard Steamship Co., upon the foregoing points the Judge did not fail to intimate where reparation should be sought.

Said Judge Mayer:

While in this law suit there may be no recovery, it is not to be doubted that the United States of America and her Allies will well remember the rights of those affected by the sinking of the "Lusitania," and when the time shall come will see to it that reparation shall be made for one of the most indefensible acts of modern times.

To meet and answer this contention will, indeed, be a most difficult task for the Kaiser's delegates to the peace conference.

Reparation for the thousands of murdered merchant seamen has already been demanded by Great Britain's Premier. And the "Lusitania" verdict, summarized herein, indicates that America, too, will insist upon adequate reparation for every submarine victim, for every man, woman and child murdered through ruthless and piratical warfare upon the seas.

THE "CHEAP LABOR" POLICY.

The following press item appeared in San Francisco dailies during the past week:

Twenty-eight Chinese, comprising the crew of a steamer of the East-Asiatic Company, indulged in a passive mutiny when the vessel arrived at a Pacific port. The Orientals affirm that they had shipped with the understanding that they would remain on the Pacific, and when they learned that the United States Shipping Board intended to send the vessel with its cargo of sugar to Atlantic waters they refused to do duty. The only thing to do, according to Otto Jelstrup, the East-Asiatic agent here, is to send the Chinese home as soon as possible and fill the vacancies with other sailors. The Shipping Board will be asked to furnish the necessary men.

Comment upon this "mutiny" is scarcely necessary.

If the champions of Oriental labor had had their way in years past, white seamen would be practically extinct to-day. Only the persistent battle waged by the organized seamen has saved the day for America, and it is still possible to man our ships by experienced and courageous white seamen.

Surely, it is fortunate that America did not listen to the plea for "cheap labor" and adopt the manning policy so fervently urged by Mr. Robert Dollar.

Some observers think that the most characteristic thing about the American sailors and soldiers, something which astounds the enemy and excites the admiration of our allies, is the capacity of the American fighters to do individual thinking and fighting. The German fights successfully only in mass formation, in organized bodies, while every American soldier has an initiative and independence of action which gives him remarkable efficiency in open fighting. They are not senseless cogs, but each is an individual working unit in a great fighting machine. Every American at home should feel an individual responsibility and do his or her individual part in winning the war. There is not an American citizen who can not help win the war. The Fourth Liberty Loan drive begins Sept. 28. Enough said!

"THE RIGHT TO QUIT."

How the German Seamen's Unions' Chief Executive Brazenly Lined Up With the Enemies of Human Freedom.

For reasons indicated in this issue's editorial, entitled "Fundamentals of Peace," the following is reprinted from the Journal of June 2, 1909:

SEAMEN SEEKING LIBERTY.

"It has taken many years in the experience of the European seamen's unions to bring about a realization that the first and main condition of successful industrial organization of seamen is the establishment by law of the seaman's right to quit his vessel when in a safe harbor. Slowly but surely, however, the leading men in the European seamen's unions, with but one notable exception, have come to understand that all other grievances about which the organized or unorganized seafarers may justly complain are but minor evils when compared with the curse of involuntary servitude under which the seafaring people of several of the most enlightened nations are still compelled to labor.

"According to a report by the International Transportworkers' Federation, President Lindley of the Swedish Seamen's Union, who is also a representative in the Swedish Parliament, has submitted in Parliament three propositions pertaining to seamen. A large number of representatives are said to have pledged their support to Mr. Lindley's propositions, which read as follows:

"'1. That seamen shall be placed on equal footing with other citizens of the nation and in consequence shall not be arrested and punished for leaving their employment when their vessel is in safety in a home port.

"'2. That the seamen be given some participation in the management of the Seamen's Offices (Shipping Commissioners' Offices) and that explicit instruction be given to all Consuls and Managers of Seamen's Offices to note carefully any and all encroachments upon the legal rights of seamen.

"'3. That seamen be given the privilege to begin their compulsory military service at any time, instead of having to wait for a specified day.'

"The official organ of the German seamen's unions, 'Der Seemann,' edited by Mr. Muller, expresses doubt as to the advisability and propriety of seamen asking the law-making bodies to unshackle the chains which tie them to their ships. Mr. Muller, who thus evidences his inability to understand that freemen have certain advantages over slaves, criticizes Mr. Lindley's proposition No. 1 in the following language:

"'While we fully sympathize with Mr. Lindley's propositions 2 and 3, we can not refrain from expressing doubts concerning measure No. 1 for tactical reasons as well as upon principle. We contend that it can never be in the interest of seamen to ask for something impossible in a Parliament which in its majority opposes progress and favors reaction. Particularly, when from the seamen's point of view the very greatest doubts must be entertained against such demands.'

"Unfortunately, Mr. Muller does not enter into details regarding the 'seamen's point of view,' and we can not possibly surmise his own point of view. Perhaps, the editor of the official organ of the German Seamen's Union has a faint sense of humor, and we strongly suspect that his conscience tells him that his distorted 'seamen's point of view' is just a little out of place in the columns of a paper owned and controlled by seamen. Really, it is enough to make angels weep, to think that in this year of our Lord 1909, a representative of seamen organized to better their conditions should oppose the proposal to put seafarers on equal terms with workers ashore, by granting them the privilege to quit their work when in a safe harbor. To our knowledge there is just one reason why Mr. Muller is opposed to granting more freedom to the seamen. Mr. Muller is a class-conscious Socialist first, and only incidentally a trade-unionist. Every action of Trade-Unionist Muller is inspired and modeled in the fertile brain of Socialist Muller. For instance, Trade-Unionist Muller may be tempted to ask the German Reichstag to give more liberty to the merchant seamen of the nation, he could appeal to every patriotic German statesman to do justice to the merchant seamen, for the nation depends upon them to man her growing navy. But Socialist Muller scouts the idea of permitting any others than Socialists to receive credit for granting more liberty to seamen. Socialist Muller is content to have the seamen wear their shackles until the Parliaments of the world are dominated by Socialists. These, we believe, are the sole reasons for the extraordinary position which Mr. Muller has taken in criticizing the Swedish seamen for asking for as much liberty as is enjoyed by the humblest toiler ashore.

"Great credit is due Mr. Lindley, who, although himself a Socialist, is nevertheless a broad minded trade unionist with the courage of his convictions. Let us hope that success will crown the efforts of our fellow-unionists

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Sept. 23, 1918.
Regular weekly meeting came to order at 7 p. m., Ed. Andersen presiding. Secretary reported shipping good.
JOHN H. TENNISON,
Secretary pro tem.

DIED.

Albert Wohlschon, No. 179, a native of Germany, age 61. Died at San Francisco, Cal., Sept. 9, 1918.

Shipping terminals, piers and warehouses covering an area of $1,250,000 square feet may be built at Everett, Wash., if plans forwarded to the Quartermaster's Division at San Francisco by the Everett Port Commission prove acceptable. At the invitation of Colonel De Vol, U. S. A., these plans have been drawn by Taggart Aston, Port Engineer at Everett.

Consolidation of the purchasing department of steel ship division, the production department and the transportation department is being affected this week in the Portland, Ore., offices of the Emergency Fleet Corporation. Heads of these departments are in Portland from district headquarters in Seattle arranging details of the changes.

The New Westminster Construction & Engineering Co., New Westminster, B. C., has secured contracts for ten wooden ships for French interests. Five will be 1,500 tons and the remainder 3,000 tons.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

President Johnston of the International Association of Machinists gives this explanation of the strike of the 6000 members of his organization in Bridgeport, which has been ended by the announcement by President Wilson that they must return to work under the terms of the Eidlitz award or be outlawed from all war industries for a year.

Bridgeport is the home of between 65 and 75 plants that are doing war work. The only considerable body of union men in the town are the Machinists. These union men are skilled. They want to deal with the shop bosses through their own committees of skilled men who understand their needs. They do not want to give their interests into the care of committees of unorganized and unskilled workers.

The award against which they went on strike was made by Otto M. Eidlitz, a New York architect, whose name was accepted by the labor members of the National War Labor Board as one of the umpires, at the recommendation of the Carpenters' spokesman in the Board. When the War Labor Board failed to agree on the Bridgeport case, they drew lots to choose one of the ten men on their list of umpires, and Eidlitz was drawn. When he made his award, which both sides were bound in advance to accept, he applied to the entire Bridgeport district the same plan of shop committees and central board of appeals that had been applied to the plant of the General Electric Co. at Pittsfield, Mass. He also fixed wage increases on a sliding scale, without reference to the ordinary classifications of skilled mechanics.

This award, the Bridgeport members of the Machinists' Union believed, would put the control of the labor situation in the hands of the bosses, since the shops where there were only a handful of union men would probably be so "handled" in the election of shop committees that the favorites of the management would be chosen as representatives of the workers. The same thing, they declared, would happen in the case of the central board of appeals: non-union men, popular for reasons quite foreign to industrial issues, would win the elections. Then the fruits of years of trade union organization and sacrifices would be lost, through the failure of the workers' committees to fight for the highest possible standard of living for the workers.

It was this fear that the bosses would capture the elections inside the majority of the plants that brought on the strike. The union men saw no hope of an early readjustment of wages, which War Labor Board officials believed would be secured through the new system of elected committees. The international officers of the Machinists shared the anxiety of their members in Bridgeport, but they urged the men to stay at work, and to wait and see whether their fears of a reactionary set of committtees were justified. The men refused to wait and see. They declared that Eidlitz had been unfriendly to union labor, and had violated the spirit of the President's proclamation of April 8. They pointed to the fact that Eidlitz had lobbied at Albany against a workingmen's compensation law. They decided that no good could come out of his award. So they went out.

President Wilson did not issue his ultimatum until the general executive board of the Machinists had given the Bridgeport strikers 48 hours in which to go back to work or stand suspended. They did not go back within the 48 hours, but the President's letter was published within that time, and the strikers had agreed that they would go back if the President asked them to do so.

Johnston and the other international officers agree with their members at Bridgeport on the probability that shop committees of unorganized and unskilled men will not make so good a showing against the bosses, in debate, as would committees of union veterans. They believe that the Bridgeport award will have to be revised, upon appeal, so that committees of each class of labor will deal with the management. In the meantime they will make the union influence go as far as it can among the 90 per cent. of Bridgeport workers who made no protest against the Eidlitz award.

* * *

On Monday, September 23, Joint Chairmen Taft and Walsh, with Messrs. Olander and Michaels, of the National War Labor Board, commenced hearings on the Minneapolis Steel & Machinery Co. dispute, in Minneapolis. Only in very exceptional cases has the board sent its two chairmen along with a labor member and an employer member, to investigate a complaint and make an award. This Minneapolis dispute is important because it involves the action of the State Public Safety Commission in issuing an order, based on a pretended agreement between organized employers and certain labor officials, that no more shops should be unionized during the war. That order directly violates President Wilson's proclamation of principles upon which the War Labor Board was established.

Judge McGee, chairman of the Minnesota Public Safety Commission, has tried to enforce the open shop rule against the employes in the plant of the Steel and Machinery Co. The strike now in progress, and the political struggle of the organized labor and organized farmer forces in Minnesota to capture the governorship and rid the State of McGee and his terrorist methods, are so closely interlocked that the War Labor Board will have difficulty in knowing, at any given moment, whether it is investigating an industrial plant or the government of Minnesota.

* * *

Something new is happening in the labor world of the United States. The National Federation of Federal Employes is not merely publishing a program for the period of reconstruction after the war, but it is setting about the hard job of carrying that program through. Its recent convention at Chicago, with delegates present from a hundred local unions adopted resolutions declaring:

1. That the Government should guarantee to the returning soldiers and sailors, and to all civilians, the opportunity to earn a living.

2. That women engaged in industry at the close of the war should not be forced out to make room for men, nor be made to underbid men in order to retain their jobs.

3. That the aged workers and children should be taken out of industry for their own good and for the good of the community.

4. That except through the usual efficiency tests, the returned soldiers and sailors should not be given civil service jobs merely as a means of discharging the debt of the public to these men.

Committees were appointed to consider and report means for making these demands effective. The convention voted that some of the measures needed were:

Old-age, health, and unemployment insurance, backed by minimum wage legislation.

A national program of construction of public works.

Preparation of farms for the returned soldiers and sailors and war industries workers.

Control of prices on the necessaries of life in the interest of worker and consumer.

Heavier taxation of big incomes and big fortunes, with taxation of land held idle for speculative purposes.

Luther C. Steward, president of the organization, is the promoter of this program, which closely resembles the demands of the British and Australian workers. In the Federal Employes' unions are some 27,000 Government employes, most of them having high school or college training, and having a standard of living that makes them dissatisfied with the present situation of the Government clerk. They are likely to become a big factor in the agitation for a greater share of power for organized labor in the Government, and they will agitate particularly through politics. Their magazine, The Federal Employe, prints in its September number an account of the defeat of Congressman Borland, who tried to force Government employes to work an extra six hours each week. They fought him in the primary in Kansas City, and he was beaten more than two to one in the city precincts, and by 6728 in the whole district.

In that connection it should be noted that Representative Edward Keating of Colorado, who has had the enthusiastic support of these Government employes and the postal workers, along with the rest of the labor movement, has been renominated in Colorado by some 2000 majority, which insures his re-election in November.

* * *

Once more the Lake Carriers' Association, dominated by the Steel Trust, has apparently tricked the seamen and firemen on the Lakes. The Carriers' officers have been summoned here by the Shipping Board, to sign the general agreement of the ship owners of the country with the organized seamen and the Shipping Board, and once more they have raised technical points which delay the enforcement of the conditions. The Sailors' Union and the Firemen's Union of the Great Lakes are watching the Carriers closely, and are steadily pressing the Shipping Board for a fair enforcement of the conditions. They are no more satisfied with "scraps of paper" in industrial disputes than was President Wilson in the Bridgeport affair.

* * *

Five years after the passage of the women's eight-hour law in the District of Columbia, Congress has permitted the women's minimum wage law to go through. This law creates a board which shall set minimum rates of wages in private employment for women and for minors. The rates must be sufficient to support the worker and her dependents in health and reasonable comfort. This Keating-Trammell bill is about to be signed by the President, who endorses its provisions.

On the day of its passage through the Senate the expected opposition to it, from Senators King of Utah and Pomerene of Ohio, was blocked by Mrs. Newton D. Baker.

wife of the Secretary of War. The Secretary, before he entered the cabinet, was president of the National Consumers' League, which drafted and promoted the bill. Mrs. Baker is a director of the League in the District of Columbia. She was probably the one person who could have prevented these two Democratic Senators from killing the measure. As it was, Reed of Missouri filibustered desperately against it, denouncing it as "bolshevik legislation," while Smoot, Lodge, Penrose, King, Pomerene and others evaded the rollcall. Thomas of Colorado voted against the bill.

WAS NOAH A PIKER?

It's all wrong about Noah being 600 years old before he knew how to build a ship, according to the editor of "Steel Topsides," publication of the Supple-Ballin Shipbuilding Corporation, Portland, Ore. As a matter of fact, this scribe has found that Noah was only 480 years old; so he has figured out that the patriarchal shipbuilder was 25 per cent. efficient. While this record shows up Noah as a piker in the shipbuilding game, compared to some of the modern contracts, it doesn't appear so bad for a green hand.

According to Biblical authority, found in the Book of Genesis, Chapter 6, which the "Steel Topsides" editor seems to have consulted, Noah was 600 years old at the time of the flood, but, according to commentators, such as Rev. Samuel McCauley Jackson, LL. D., and other noted historians, who have delved into the ancient history of the Bible, Noah received his revelation as to the deluge and how to proceed; that is, the plans, specifications and necessary blue-prints of how to build the ark and the manifest of his cargo, 120 years prior to the rising of the waters. This shows clearly that at the age of 480 he had the advanced information of how to build an ark.

It is found from data gleaned from the specifications issued that the vessel was 300 cubits long, 50 cubits broad and 30 cubits high, was a three-decker, as she was spoken of as having a lower, second and third story.

The plans of obtaining light were as follows:

"A window shalt thou make and in a cubit shalt thou finish it above." Also "and the door of the ark thou shalt set in the side."

The specifications called for "gopher" wood, a species of cypress, pine or cedar and the "pitch" with which it was coated was asphalt.

Taking the ancient measure of a cubit at about one and one-half feet, the vessel was 450 feet in length, 75 feet beam and 45 feet in height.

Snellius, of much fame in ancient times, computes the ark to have been above half an acre in area, and Dr. Arbuthnot, another historian, in 1697, computes it to have been of 81,062 tons.

As to Noah's ability in the shipbuilding game, or as to his qualifications as a master mariner, history is silent.

Noah was the son of Lamech. He was the tenth and last of the lineage of Seth, and he numbered among his crew in building and operating his vessel, three sons, namely: Ham, Shem and Japheth, and there is no indication in the Biblical account that either of them knew anything about caulking or ship carpentry.

The fact of the matter is, Noah waited 480 years for his instructions and plans from which to build the ark, and after he got these plans, finished the job in 120 years.

If Noah's Shipping Board had shot him the plans soon enough, it would, therefore, seem that he could have built four arks instead of one in his lifetime.

His biography probably reads like this:

Waiting for plans.....480 years.
Building the ark.....120 years.
Efficiency ..... 25 per cent.

HERRING RESOURCES.

The Commissioner of Fisheries authorizes the following:

A recent report from the American consul at Stavanger, Norway, on the spring herring fishery of Norway shows that in the past four seasons, including 1918, the catch had an average annual value of about $6,700,000. About 80 per cent. of the yield was salted and most of the remainder was sold locally or exported as fresh fish, a very small quantity being canned or kippered.

The importance and value of this fishery is an indication of what may be done by adequate Government encouragement and assistance and by private enterprise and address in the United States, particularly in Alaska. The herring resources of Alaska are probably not inferior to those of Norway and, considering the greater extent of the coast line, are possibly much larger, yet the average annual value of the catch in that territory for the four years ending December 31, 1917, was but $252,000.

Owing to the action of the Bureau of Fisheries in placing experts in Alaska to give assistance to fishermen in improving their methods of curing herring, and in calling the attention of distributors to the availability of the supply, the value of the output in 1917 rose to $587,777, nearly double that of the preceding year and about eight times that of 1914.

The promising feature of this comparison is not the value of the pack of 1917, which was but 8 per cent. of that of Norway in the same year, but the rapid increase in the past four years.

The imports of cured herring into the United States in normal times are heavy. By reason of war conditions these imports are now greatly curtailed and from some sources are entirely cut off, and there is presented an opportunity for Alaska to permanently acquire a large part of this trade. Each careless or dishonest packer will be a menace to the industrial progress of the Territory. The herring packed under the Bureau's instruction and supervision last year was the best received in New York, and the standard so established should be scrupulously maintained.

THE PEOPLE AND WAR TAXES.

More than $3,500,000,000 has been collected in internal revenue taxes, including income and excess-profits taxes, for the fiscal year. This exceeds by over $100,000,000 the estimates made a few months ago, and by over $200,000,000 the estimates made a year ago when the revenue measures were passed by Congress.

The success in collecting this large revenue is attributed by the Treasury Department to the patriotism and co-operation of the American people in promptly and cheerfully meeting the war burdens imposed upon them.

FOOD FISH FROM THE GULF.

Two hundred thousand pounds of fine fish have been supplied to housewives in Nashville, Louisville, and Indianapolis through the cooperation of the United States Department of Agriculture, the United States Bureau of Fisheries, and the United States Food Administration. Regular weekly shipments of carload lots are being made to these three inland cities from points on the Gulf of Mexico in order to encourage the use of less meat by an increased consumption of fish. An agent of the Department of Agriculture is working with the Railroad Administration in handling the transportation, and the distribution is under the direction of State and city food administrators in cooperation with the Bureau of Fisheries.

Ten carload lots aggregating more than 200,000 pounds have already been distributed in this way. Each dealer notifies the local food administrator how many pounds he will need for his trade and he is supplied with his share immediately upon the arrival of a car. Circulars are distributed calling the housewives' attention to the fish, and telling how best to cook them. Sea mullet, sea catfish, sheepshead, trout, and hardtail are some of the varieties that have found favor with the women. Plans are now being completed to ship fish from the North Carolina coast to Pittsburgh.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

accomplish. Team work between county agricultural agents and Government agencies is considered largely responsible for the excellent results.

Starting from Oklahoma, early in June, the Government and local officers marshaled their army of labor, which swept north as the grain ripened. All along the line every effort was made to guard the interests of the farmers and workers, to prevent surpluses of men in one locality while a shortage existed elsewhere, and to keep the whole campaign free of muddle, confusion and wasted effort.

Throughout the harvest care was taken to handle the cutting without making the Nation-wide appeal customary in other years. It is stated that this resulted in a better class of workers than heretofore.

The employment service says that the assistance to the Nation because the wheat was harvested without calling on industrial sections for aid is incalculable.

National Conference on State Labor Laws.

The War Labor Policies Board has called a conference on the enforcement of industrial standards for September 30 and October 1 at Washington. The Governor of each State is asked to send a representative.

The invitation says, in part:

"The War Labor Policies Board, appointed to unify the labor policies of the Federal Government, has prepared various contract clauses which affect industrial relations. All future contracts given out by Government departments will include these clauses. They make certain requirements, such as the restriction of child labor and convict labor and the observance of all State factory laws.

"It is planned to designate the proper officials in each State to consult with and assist the Federal authorities who are responsible for enforcing these regulations and who will, to some extent, maintain inspection services of their own.

"For this purpose the War Labor Policies Board requests your co-operation in carrying out this policy, and hopes that you will direct the designated officials to assist the Federal authorities.

"The Federal Government, in its activities concerned with industrial relations, is brought into increasing contact with State agencies. A more intimate understanding of their common purposes in the enforcement of industrial standards is therefore essential."

U. S. Educates Children.

The Ordnance Department of the War Department has developed an educational system for children of war munitions workers who are employed in localities that were bare fields a few months ago. Several of the larger municipalities have been asked to loan some of their best teachers who would volunteer for this service during the war. Secretary of War Baker has selected William G. Coburn, superintendent of schools at Battle Creek, Mich., as director of this movement. School buildings have been designed on the unit plan to admit of easy expansion, and each school will have an auditorium, gymnasium and other facilities to develop the community spirit of the adult population. Provision has been made for instruction in domestic arts, first-aid treatment and physical training for the women of the communities. As the work of plant construction gives way to plant operation, and the population becomes stable, it is planned to give employees a voice in the management of the towns.

"Labor Turnover" Loss of Efficiency.

In a speech in New York, Secretary of Labor Wilson referred to labor turnover as the "individualistic strike" which brings a greater loss by the country than all the collective strikes and lockouts combined.

"Prior to the war," said Secretary Wilson, "it was nothing unusual to find establishments having a 200 or 300 per cent. turnover annually, to find establishments where the movement of men from one job to another was so great that it required the employment of 200 to 300 workmen to maintain an organization of 100.

"Since the war there have been numbers of instances where the turnover has gone above 1,000 per cent., and in one particular instance it went to 100 per cent. a week for a period of some six or eight weeks.

"The turnover of labor means a loss of efficiency. In addition to the loss that takes place in the time between the leaving of the one and the coming of the other no man can reach his highest efficiency in any industry or on any machine until he has become familiar with his machine, familiar with his shop, with the foreman, with his shop surroundings generally, and so there is always a loss of efficiency by virtue of a turnover of labor.

"The turnover of labor is in reality the individualistic strike. It is the strike of individual, either a union or nonunion man, dissatisfied with conditions, and either unable or unwilling to secure the cooperation of his associates in a collective protest.

"My observation is that that individualistic strike—the turnover of labor—brings us greater loss than all of the collective strikes and lockouts that occur in the country, and anything we can do to reduce that turnover of labor will assist in maintaining efficiency. It is with the hope of being able to reduce that turnover to some extent that we are seeking to build up an organization by which all labor will be handled through one agency."

"THE RIGHT TO QUIT."

(Continued from Page 7.)

in Sweden to the end that they may soon obtain and enjoy that most priceless heritage of all, absolute personal liberty!"

When the foregoing was received in Germany the official paper of the German Seamen's Union, "Der Seemann," published a bitter reply in the nature of a personal attack upon Andrew Furuseth and the present editor of the Journal.

This typical German reply was translated at the time but has never before been published. It follows in full for the edification and enlightenment of all who have been unable to fathom the German workers' curious notions upon "Liberty":

THE GERMAN SNEERS AT FREEDOM.

"A fellow worker by the name of Paul Scharrenberg, of San Francisco, in the issue of the Seamen's Journal of June 2 (1909), feels called upon to launch a real seamanlike philippic against our colleague, Paul Muller. In his enlightened moral sally against the 'forgetfulness of duty' and 'reactionary attitude' of our colleague, Paul Muller, and the German seamen's workingmen's movement, this harlequin and 'would-be' arises as a preacher of 'freedom' and to make it clear to us what it means to lead the seamen in their fight for liberty. We are overwhelmed at so much 'energy,' 'desire for freedom,' 'better judgment,' 'broader views' and 'clear-sight' of our 'American' friend, 'the champion of liberty,' 'social-political pace-maker' and 'trades-union tactician.' We give here his outpouring verbatim. His article appears under the title (pregnant with meaning), 'Seamen Seeking Liberty,' fresh, amusing and thoroughly American, as follows:"

(Here follows translation of the article from the Journal of June 2, 1909.)

The German paper then continues:

"It is really difficult to make the required answer to the mad ravings of Mr. Paul Scharrenberg and at the same time consider only the case itself. We therefore consider it better to abandon Mr. Paul Scharrenberg, together with his rant, to the fate they so well deserve. Every man has the right to make a fool of himself the best way he knows. The International Transport Workers' Congress in Vienna, our colleague Paul Muller and the delegates from all other countries, accorded this right to Mr. P. Scharrenberg's soul brother, Mr. Furuseth, then why should not we at this time and place grant this the 'only earnest and sincere champion of liberty' the same privilege? This same madness that the Scandinavian Yankee and globe trotter, Andrew Furuseth, championed by word of mouth in the late congress and later in newspaper articles and letters, Mr. Paul Scharrenberg parrot-wise throws at us in the organ of our American sister organization. Only he makes his impeachment against our attitude upon this very important and weighty question somewhat more unfortunate and ridiculous than his intimate Furuseth, who soon got over his malady in Vienna, when his ideas of 'liberty' and 'struggle for freedom' were turned into laughter and ridicule.

"It hurts us to think that the otherwise esteemed leader of our Swedish sister organization, Mr. Lindley, has so far lost himself in the 'liberty maze' of the 'practical American,' Furuseth, that he, more out of courtesy than from sincere conviction, undertook to lay Furuseth's cuckoo egg in the collection of printed matters of the Swedish parliament. That the 'burgoisie-patriots' and 'statesmen and parliamentarians' of the Swedish parliament, whom these American 'Democrats,' Furuseth-Scharrenberg, are so much in love with, showed no desire to hatch the Furuseth-Lindley cuckoo eggs, experience has shown us, and we doubt very much whether friend Lindley has any desire to make a further attempt to juggle in the Swedish parliament with the Furuseth cuckoo eggs. But we are also convinced that the Furuseth-Scharrenberg 'hirnverbranten' (emanating from a burnt-out brain) demands will be set on the beach by the American parliament in the same manner as happened to friend Lindley in the Swedish parliament through his own foolishness.

"The anti-Socialists Furuseth-Scharrenberg have as yet produced no proof that the burgoisie-patriotic lawmakers in America are at all enthusiastic over their anarchistic 'rights' and 'freedom' quack propositions, and are willing to make them any concessions. It makes us tired to have to discuss with these 'practical politicians' the basic principles of freedom, and the trades-union and political tactics of our colleague, Paul Muller, as well as the whole seamen's workingmen's movement of Germany. We will only remark: Whoever knows the history of our struggle for the rights and freedom of the seamen, on the outside as well as in parliament—and our colleague, Paul Muller, has for 13 years been the leader of this struggle—must regard the 'hirnverbranten' (emanating from a burnt-out brain) attack of the American Paul Scharrenberg, whose pen can only have been inspired by that half-idiot A. Furuseth, as uncalled for as nonsensical. We take our mission and our mandate too seriously that we out of a sense of our industrial impotence on the outside should support any demands for so-called 'freedom and rights,' that after all are two-sided and consequently could be used against the seamen, and besides make us ridiculous. We submit our position with clear conscience to the critical judgment of the public. We are engaged in practical politics. The politics of the Utopian and 'Wolkenschieber' (those who shove the clouds) we leave to the befogged 'practical Americans' Furuseth-Scharrenberg. Even when they find themselves in company with that Epigon the 'great' J. H. Wilson, of London."

STEEL SHIPS WITHOUT RIVETS.

The first steel vessel built without rivets, so far as known, has just been launched on the south coast of England. The production of this vessel, it is considered, may mark an epoch in shipbuilding, the plates being fused together by electric welding in one process. General adoption of this process, it is held, would speed up production, with an estimated saving of from twenty to twenty-five per cent. in both time and material. The United States Shipping Board, it is understood, has been in close touch with the experiment, with the result that arrangements are said to be in hand for the building of a number of 10,000 ton standard ships after this plan, in the production of which the riveters will become welders.

A SEA GOING CANAL BOAT.

One may shortly travel by water from Duluth to New Orleans without changing boats. This has already been possible for years by boats short enough to use the locks of the Welland Canal; but the new barge canal built by the State of New York from Lake Erie to the Hudson will enable it to be accomplished without the long detour down the St. Lawrence. A vessel adapted both to the canal and the ocean part of this trip has just been designed and built by Captain McDougal, of Duluth, the originator of the "whaleback." The economic advantages of ability to ship a cargo directly from Lake to Atlantic ports, or across the ocean to Europe, need no elaboration. The locks of the new canal are 320 by 45 feet, and the newly designed freighter must, of course, be slightly smaller than this. As a matter of fact, the "R. L. Barnes," as she is called, is 258½ by 43 feet, and measures 24 feet from keel to top deck. Says a contributor to "The Scientific American":

"In the design of the vessel it was sought to secure three principal results: First, a ship of maximum cargo-carrying capacity on moderate dimensions; secondly, a vessel which could utilize standard steel shapes in its construction, and that would require a minimum amount of shop-work at the shipyard; and thirdly, so to construct the upper works, smokestacks, masts, etc., that these could quickly be removed and placed in the hold, and the vessel, as thus stripped, be capable of clearing the bridges and overhead structures of the State Barge Canal.

"The most striking and novel feature about the 'R. L. Barnes' is the strictly rectangular cross-section of the ship and the absence of any fairing away of the lines toward the bow and stern, which are strictly wedge-shaped. The flat floor extends from stem to stern, and the cross-sections of the vessel, even at a few feet from the stem, show an absolutely rectangular form, with parallel sides.

"The builder claims that this type of construction is not only very cheap and conducive to rapid erection, but that it gives a maximum amount of cargo capacity, and also provides a vessel that is unusually seaworthy.

"It will be noted that the 'R. L. Barnes' has no bilge keels, the effect of these being secured by the square bilges. Furthermore, the deck, which is slightly crowned, is perfectly straight from stem to stern, and there are no bulwarks.

"The designer, who is an old steamship captain with long experience on the Lakes, in speaking of seaworthiness said: 'I have had opportunity to study the behavior of very large flat-bottomed, flat-decked, square-shaped dumping mud-scows, while they were being towed in rough weather. When the towing steamer is pitching and rolling heavily, the mud-scow, which is loaded to within a few inches of its flat deck, is not rolling and pitching, and it is astonishing how very little water comes aboard.' The original idea of the whaleback was based upon these observations and led to the construction of the 'R. L. Barnes' and her type.

"With a view to reducing the depth of the ship to facilitate its passing under bridges on the canal, the depth of the double bottom is kept as low as practicable and longitudinal strength is assured by the provision of a central longitudinal bulwark. . . .

"The captain of the ship assures us that her seagoing qualities are most excellent. She was caught in a recent very heavy northeasterly gale off the Long Island coast, and when other ships within sight were making heavy weather of it this vessel was remarkably steady, the seas making a clean sweep across her deck and little water remaining aboard. The deck-houses forward and aft are built in bolted-up sections and are heavily bolted to framing that forms part of the deck-structure. Here, of course, is a structural feature to which particular attention should be paid to insure that these connections are sufficiently heavy to stand up against the full impact of Atlantic seas. . . .

"As showing the cheapness and simplicity of construction, Mr. McDougal writes us that the 'R. L. Barnes' was built without the use of bending rolls or furnace. The only furnace was a fire in a blacksmith shop to heat a few plates for the stern of the ship. The erection was done by a couple of electric derricks which hoisted the frames and plates into place. After the ship was built, the two traveling derricks, which are mounted on wheels, were hoisted on board and are now utilized for loading and unloading the ship. Their width is such that they travel down each side of the ship on the space between the ends of the hatch covers and the outside railing of the ship. As they move from hatch to hatch they are made fast to heavy eyebolts in the deck. The current is furnished to them through cables leading from a generator in the engine-room.

"The 'R. L. Barnes' is an example of utility carried to the utmost limit; and one misses, of course, the graceful sheer and the faired-out lines of the standard type of ship; but after all, this vessel is merely the logical and ultimate development of the typical Great Lakes freighter with its moderate sheer, its long line of hatches, and its deck-houses concentrated at the extreme ends of the ship. In this age of insistent demand for ships, the 'R. L. Barnes' certainly offers attractive features in her cheap first cost, great rapidity of erection, and large cargo-carrying capacity. She probably will find it easier to breast the gales of the Great Lakes and the Atlantic than to make headway against the currents of incredulity and the heavy seas of human conservatism and hostility to the thing that is novel."

GERMANY'S URGENT NEED.

"Facts inevitably force the conclusion that a German victory would lead to a terrible reaction in Germany," writes Philip Krantz in the New York Volks Zeitung, after quoting Karl Kautsky, the recognized German interpreter of Marxian Socialism. Hope for German freedom lies in the defeat of German arms, according to Kautsky. He points to the war of 1866, when Bismarck led Prussia into a victorious contest against Austria, and to the victorious military struggle with France in 1870, both of these conquests having been followed by serious losses to the liberal forces of Germany.

"Recent occurrences on the east front have had an almost similar effect on the German people," says Kautsky. "Last summer a great majority of the German people was inclined favorably to the policies of the minority Socialists. This was evidenced by the lenient policy of the Reichstag majority when it accepted the principles of peace without annexations and for self-determination of peoples, but during the last months the sentiment has changed completely."

Labor News

The Brewery and Soft Drink Workers' Journal calls attention to the thirty-second anniversary of the birth of that international union, which was organized in Baltimore, August 29, 1886.

Miss Elizabeth Christman, for six years general secretary-treasurer of the International Glove Workers' Union, has been appointed chief of women investigators of the National War Labor Board. She will assist women workers to present their grievances to the board.

The International Union of United Brewery and Soft Drink Workers has signed an agreement with the Fleischman Yeast Company, which has plants in the following cities: Baltimore, Chicago, San Francisco, Fleischmann Yeast Company, which All workers in these factories who come under the jurisdiction of this international must be members of this organization. The eight-hour day is recognized, as is the six-day work week and time and one-half for overtime. Wages are increased and arbitration provisions agreed to. About 2,000 employes will be benefited by this agreement.

State-administered workmen's health insurance was endorsed by the Colorado State Federation of Labor at its recent annual convention. A State insurance fund to provide workmen's accident insurance was also favored. President W. H. Young, in his report, declared that an objectionable feature of the present workmen's compensation law is "placing the insurance with companies who fight paying the policy on the slightest pretext." The resolutions authorize the executive board to draft suitable bills covering both health insurance and State compensation fund for submission to the Legislature.

The Wisconsin industrial commission has awarded Peter Heruben, of Superior, $2,776.02 damages against a restaurant keeper for injuries received by a sausage grinding machine. The boy was under 16 years of age at the time of the accident and the employer failed to secure a child labor permit. The commission has trebled the damages under a law effective last year, and the restaurant keeper must pay heavily for his neglect. The award, which is the first case under this law involving a large sum of money, provides that the employer must pay two-thirds of the compensation, or $1,851.28, while his insurance company is to pay the regular compensation, $925.64.

There are plenty of unskilled workers who are in non-war business and they must be transferred to meet the demand for common labor in essential industries, says the United States Employment Service Bulletin. The question is one of distribution and to meet the unskilled labor shortage State directors have been notified that there can be no temporizing and that drafts must be made upon the non-esstntial industries in their States. A strict order has been issued against taking men from farms, railroads, mines and other industries. It is stated that "an aroused public sentiment, which will brand as a slacker any man who wilfully refrains from working at some productive job, up to the full extent of his capacity, will be more effective than any laws or regulations."

Cole H. Blease, characterized by President Wilson as unfriendly to the Administration, was badly beaten in the senatorial primary in South Carolina by Nat B. Dial.

The Fuel Administration has called upon the public in States east of the Mississippi to cease the use of automobiles (with a few exceptions), motorcycles, and motorboats on Sundays, until further notice, as a gasoline-conservation measure.

Government production of metals and minerals is proposed in a bill introduced by Senator Henderson, of Nevada, after conferences with Secretary Lane and Chairman Baruch, of the War Industries Board. It is said to have the approval of President Wilson.

The total actual cost of producing electricity in the municipal electric lighting plant in Cleveland, Ohio, including interest, depreciation, taxes, etc., is a little over a cent and a quarter a kilowatt hour (.0126). The average charge under private ownership is about nine cents.

A reorganization of the War Department was announced by Secretary Baker, under which Benedict C. Crowell, First Assistant Secretary of War, will perform the duties of a director of munitions, and John D. Ryan, formerly head of the Aircraft Board, will become Second Assistant Secretary of War and Director of Air Service.

A hearing was recently held before the legislative committee of the Senate of New York on municipal ownership. There were present mayors and representatives from nearly every city of importance in New York State. Every one of them, including Mayor Hylan of New York City, was in favor of the municipal ownership and operation of public utilities.

The little city of Pekin, Illinois, a few miles south of Peoria, owns and operates a streetcar line. The people there are as proud as a peacock of their municipal enterprise, which is doing good business and is a success. The annual report recently issued shows that the average profits earned by the municipal line in excess of all expenditures have been over $5,000 a year for the last six years.

Bernard M. Baruch, chairman of the National War Industries Board, has suggested to the Federal Reserve Board that it work out some plan under which financial aid might be extended to industries that are affected by the war. His purpose is to assist industries that must be "skeletonized" to get maximum production from industries necessary to winning the war, and to soften the blow on injured industries and to prevent their wrecking.

The Federal Bureau of Labor Statistics reports that retail prices of food as a whole in the United States increased 7 per cent. in the one-year period, June 15, 1917, to June 15, 1918, and increased 2 per cent. in the one-month period, May 15, 1918, to June 15, 1918. Food as a whole shows an increase of 66 per cent. in June, 1913, as compared with June, 1913. The smallest advance in this five-year period is shown in milk, with 44 per cent. Butter increased 45 per cent. and eggs 55 per cent. Eight articles advanced from 55 to 74 per cent. and three articles ranged from 78 to 87 per cent. Corn meal, lard and flour more than doubled in price.

Domestic and Naval

The Newfoundland schooner "Bianca," which was towed to an Atlantic port after being attacked by a German submarine, was seized August 30, in Admiralty proceedings filed by fishermen who brought her in, who ask $125,000 salvage.

Auxiliary schooner "Margaret Dick," of 1,050 tons gross, launched at the old Churchill shipyards, Hantsport, N. S., by Fauquier & Porter, has been purchased by the British Colonial Transportation Co., which will send her to Africa with a quarter of a million feet of lumber.

Removal of the Emergency Fleet Corporation lumber headquarters from New Orleans to Philadelphia has been ordered in connection with the creation of a new lumber division by the Shipping Board. W. J. Haynan, who has been assistant Lumber Administrator, is named General Lumber Superintendent. The office of Lumber Administrator, formerly held by J. H. Kirby, has been abolished.

Captain Leeland P. Hawkins of the steamship "Yadkin" and five other officers of the ship were found guilty of conspiracy against the Government by a jury before United States Judge Thomas I. Chatfield in the United States Court in Brooklyn. The men took food for the Allies to Europe on the "Yadkin" and instead of coming directly back to this country cruised about the Mediterranean, spending all their money and selling the ship's stores to obtain more to finance the cruise.

Three of the nine fire boats owned by New York City have been out of commission for a time, it being found impossible to get from the manufacturers, boiler tubes that were necessary to replace those worn out. Fire Chief Kenlon appeared before the Sub-committee on Risks and Insurance of the Mayor's Committee on National Defense recently and referred to this condition. The state of affairs was then brought to the attention of Judge Parker, chairman of the Priority Board, who recognized the importance of giving priority to all fire-fighting apparatus and assigned fire equipment to class A-6.

The Shipping Board authorizes the following: To carry out her great military program, America is building a large fleet of transports and food ships. After the war this merchant marine will be used in America's enormous ocean-carrying trade. It is to be expected that enemy propagandists should endeavor to use this American merchant fleet as a basis of arousing distrust between the Allies. Guarantees of fair dealing in this matter are found in America's unselfish policy in fighting for democracy, in President Wilson's devotion to the cause of humanity, and also in America's past record.

Standardization of the types of American merchant marine vessels is the purpose of Charles M. Schwab, Director General of the Emergency Fleet Corporation. The aim is to simplify the standards in order to speed up production, making fabricating much more easily accomplished. There are understood to be now ninety-one types of vessels under construction. A conference recently held in Washington in which this decision was reached, was participated in by Mr. Schwab, Edward N. Hurley, chairman of the Shipping Board; P. A. S. Franklin, chairman of the Ship Control Committee, and J. H. Rosseter, Director of Operation.

Olof Nilsson, born in Hufvulsvik, Jamtland, Sweden, year 1880, height 5 ft. 8 in., brown eyes, dark brown hair; last heard from in 1909, on board S. S. "Kurrachee," Karrachi, India. Anyone knowing his whereabouts please notify his sister, Mrs. Nels Olson, 1033½ W. First St., Duluth, Minn. 8-21-18

A. Ullman, second mate on board S. S. "Davenport" from March 1 to March 20, 1918, will please call immediately in relation to important matter, at the office of J. O. Davenport, 112 Market St., San Francisco, Cal. 8-21-18

Members of the crew of the S. S. "Argonaut," who were on board when she picked up the steamer "Jason," can recover their money promptly by communicating with Silas B. Axtell, 1 Broadway, Room J, New York, N. Y. 7-31-18.

News from Abroad

An additional credit of $400,000,000 was made by the United States Treasury to Great Britain on August 30. This brings the total of credits to Great Britain to $3,725,000,000. The total advances to all of the entente allies now amounts to $7,092,040,000.

The Argentine Government has established a line of steamers to operate from Buenos Aires to Punta Arenas, on the Strait of Magellan, stopping at numerous ports on the coast. The fleet at the beginning of operations consisted of six steamers.

A report is abroad in Montreal that Canadian Pacific Railway interests have been negotiating in London for the purchase of the Peninsular and Oriental Steamship Lines, which run from Liverpool to India. With this connecting link the Canadian Pacific Railway would have a complete service around the world.

A dispatch to the Exchange Telegraph from Copenhagen says the German Government, replying to Norway's protest against the sinking of Norwegian Government ships outside the danger zone, has declared it will compensate Norway should that country prove the ships were sunk without warning.

Foreign shipping at all Chinese ports declined by 1,738,760 tons in 1917. The British Government control of vessels under its flag during the year reduced the tonnage by 2,264,356 tons. American tonnage increased by 325,242, the Dutch by 248,444, and Japanese by 347,812. Freight rates were exceptionally high, and shipowners, especially Japanese, had a very prosperous year.

Arrangements have been made between the Governor of the Dutch East Indies and the War Trade Board to ship a large part of the big 1918 sugar crop of Borneo, Sumatra and Java, to the American market in Dutch steamers now lying idle in the East Indies. It is understood that the agreement reached will effect the movement of 100,000 tons of sugar in the forty or more Dutch steamers. Normal American exports to the islands will continue subject to such limitations of commodities deemed essential to the war.

The sensation in the past week's news was President Wilson's masterly repulse of the German peace offensive. In a few words, drafted in the course of a few minutes, he completely shattered an elaborate diplomatic document written in Berlin and mailed from Vienna by one of the Kaiser's messengers, Baron Burian. More might have been said with less effect, while nothing could have improved upon the mere promptness of the Presidential rejection. To the Allies the American reply was an electrical inspiration; to the enemy its suddenness rather than its nature was a painful shock. European diplomacy, though believing itself to be subtle, is really stodgy and utterly unable to understand American brevity and candor. That the leader of the greatest nation on earth should talk in telegrammatic and perfectly intelligible language when replying to a mass of disingenuous verbiage came as an altogether too painful reminder that the day of the long-winded diplomat is passing, and the era of plain, democratic speech is at hand.

With the Wits

Bobbie's mother had just taken out her winter garments. "Ma," said Bobbie, "what did the moths live on before Adam and Eve wore clothes?" —Awgwan.

"I hear that you said I was the biggest fool in town."

"No, sir, I did not. I do not consider you capable of taking first rank in anything."—Boston Transcript.

Barber—Your hair is getting very thin, sir.

Customer—Yes, I treated it for a month with anti-fat, thinking it was hair restorer.—Boston Transcript.

"Don't you ever change your mind about anything?"

"Not often, now. I've found that I am just as liable to be wrong the second time as the first."—Boston Transcript.

"I'm puzzled. My boy writes me from England that he's lost twenty pounds."

"Getting thin, eh?"

"That's what worries me. I don't know whether he's referring to weight or money."—Detroit Free Press.

Flatbush—So he's taken a house in the country?

Bensonhurst—Yes, and he says they have running water in every room.

"Not in the garret?"

"Oh, yes; the roof leaks."—Yonkers Statesman.

Willis—How do you like army life? Quite a number of new turns for a fellow to get used to, I suppose.

Gillis—You bet. At night you turn in, and just as you are about to turn over somebody turns up and says, "Turn out."—Life.

"Now, Lieutenant Tompkins," said the general, "you have the battalion in quarter column, facing south—how would you get it into line, in the quickest possible way, facing northeast?"

"Well, sir," said the lieutenant, after a moment's fruitless consideration, "do you know, that's what I've often wondered."—Boston Transcript.

Secure and Profitable

The wise man keeps part of his money in a reliable savings bank. If you are making money now, why not put aside something for a rainy day?

Bagley's Gold Shore

Packed in convenient pocket poucher. Contains more good Smoking Tobacco for the money than any package for the price. Why buy tin goods and pay extra for the tins.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

VOL. XXXII, No. 4. SAN FRANCISCO, WEDNESDAY, OCTOBER 2, 1918. Whole No. 2506.

"A WORLD SAFE FOR DEMOCRACY."

Is Economic Strife To Be With Us Always?

The enthusiastic adoption by our European statesmen and publicists of President Wilson's famous declaration that the object of the war is to make the world a safe place for democracy is either a momentous act of spiritual conversion or the last word in camouflage. For while no one would dispute the genuineness of Mr. Wilson's attachment to the great ideal, the past records of most political leaders in this and other European countries bear little testimony to the vigor of their new-found faith. While it is true that the forms of political self-government inhere in the constitutions of the European Allies, as in that of the United States, the spirit of democracy has hitherto pulsed feebly through these organs. Moreover, social analysis has made it evident that political democracy is inseparable from industrial democracy, and that the complete failure of the peoples hitherto to attain the latter is chiefly responsible for the defects of the former.

No thoughtful democrat can accept the shallow representation of the war as a conflict of free democracies, upon the one hand, against military despotism upon the other, or feel assurance that the mere defeat or even the destruction of the latter will in itself afford security for the attainment of his ideal. For while Prussianism stands, indeed, for the negation of democracy, is the allied power which shall defeat it entitled to the positive assertion of that name?

Invoking the Help of Beelzebub.

To be sure, I do not here dwell upon the obvious fact that war itself, being the operation of arbitrarily directed force, is the antithesis of democracy, and that every nation during the process of war is compelled to suspend many of its ordinary liberties. It is admitted that the help of Beelzebub must be invoked in order to expel the devil of Prussian militarism. The necessary cost of this tactic must, however, not be left out of account when we regard the war as an instrument for achieving democracy. For it can hardly be denied that a prolonged suspension of ordinary civil and political liberties, not to speak of the fetters upon economic freedom, must go some way towards establishing the habit and temper of arbitrary rule upon the one hand, of unquestioning submission on the other. In a word, war makes for a "servile state" with ever-extending areas of despotism, and the fact that peoples in the stress of the emergency accept this curtailment of their liberties does not purchase for them immunity from the practical and spiritual reactions of this servitude. They will be less able to look after their own affairs in the future in consequence of this experience.

In considering the possibility of achieving democracy as the fruits of a successful war, we cannot do otherwise than approach our subject by this gate. For the practical problem will have been transformed by the experience of the war-time. I must not be taken to prejudice the issue if I insist that we must realize at the outset that the reactionary forces, the enemies of democracy, will be more strongly entrenched when the war ends than they were before, and will be more clearly conscious of the need and nature of their defenses.

The Difficulties of Demobilization.

However the war ends, a profound sense of insecurity alike in international relations and in domestic affairs will for some time afford support to the emergency powers wielded by every government. Military force will everywhere be at hand, and the disposition to use it, so as to maintain social and industrial order, will be rife among "the authorities." The difficulty of the tasks of demobilization and of restoring the tenor of pre-war economic life must involve the long retention of many of the extraordinary powers wielded by governments. Nor it is possible to suppose that, when this early period of reconstruction is got through, the social economic structure and working of this or any other belligerent country will return to the pre-war conditions. The state, with its arbitrary or ill-checked executive powers, will be found in permanent possession of large new functions, political, social, economic. Railroads and mines, electric power, banking and insurance, chemicals and other "key industries," will either be nationalized or tightly controlled by the state, and local authorities will also possess greatly extended powers. Society, through its instrument the state, will keep an eye upon and lend a hand to "its" citizens and "its" producers from the cradle (and before) to the school room, the workshop and office, right on to the grave.

The whole attitude of mind towards the state will have been transformed. Hitherto the balance was heavily on the side of individual choice, private enterprise, free personal contract. Henceforth it will be on the side of social organization, public operations, collective co-operative arrangements. This is what must happen, whether we as individuals like it or not. As one of your own great men has said, "There is no way of unscrambling eggs." The war has shut off return to pre-war private enterprise and free competition in industry, commerce and finance. This statement, of course, must not be taken absolutely. It applies to the large routine enterprises. Great scope for personal enterprise and lucrative business will doubtless remain in numerous by-paths and new developments. Indeed, whatever business is left "free," there will be an active rush to establish combines, trusts, syndicates and other modes of successful profiteering. This will be one of the chief barriers to the realization of industrial democracy, for it will tend to substitute lateral for vertical divisions among the workers who constitute the body of the "demos."

What Is to be the Struggle of the Future?

But the central problem will be that of the ownership and control of the new powerful state. A complicated struggle for its possession must occur. Between whom? What are the opposed forces in the battle for democracy? If I reply, capital and labor, I shall seem to many to be taking a crudely class economic view of a situation in which many other causes, political, moral and spiritual, are involved, and to be offering a purely "materialistic" interpretation of history. Surely, it will be said, if this world-war has taught no other lesson, it has shown that every people sets before itself other aims than economic gain as of supreme value (whether these aims be political dominion, patriotism, honor or the supremacy of law) and for this attainment is willing to sacrifice all material goods, money, and life itself. Can it then be true that the struggle for democracy to come must be realized primarily and essentially as an economic struggle between the propertied classes and the proletariat?

It is not easy to give a plain anaswer to this question without appearing guilty of gross exaggeration. The spirit of collective free-will, self-determination in the larger sense, cannot indeed be comprehended merely, or mainly, as an economic process. Its spiritual contents are comprised of all the human needs, aspirations and activities for whose satisfaction men and women work as members of organized society. Humanity at its higher level, in its better methods, appraises the economic process far lower than health, beauty, knowledge and spiritual goods, and the efforts to attain these latter play a larger and larger part in the meaning of civilization. And yet in a crisis like this, when civilization is literally shaken to its foundations, it is to these foundations that we must closely look in the process of reinstating it upon a democratic model.

Democratic Control of Industry.

Among the great nineteenth century prophets of democracy it fell to the most spiritually-minded of them all, Mazzini, to recognize that political democracy was inseparable from economic, and that the distinctive error of the French revolution and its sequel was the failure to realize this truth. It is, therefore, not any overapprizement of material goods but the plain reading of history that obliges us to see that the first condition of a world safe for democracy is to set the ownership of property and the control of industry upon a democratic basis. Before the war this demand was emerging more urgently on the consciousness of the different nations, and was seeking satisfaction sometimes by peaceful, sometimes by explosive pressure.

The political atmosphere was everywhere rife with economic agitation. When calmer analysis is possible, and causes for the war are sought further afield than the catastrophic events of 1914, it will be found that inextricably blended with the lust of political power which impelled the Central States and Russia to force the pace of militarist preparations, were the gathering standards of domestic strife, and that even in those other states which least willed the war, and were most conscious of their purely defensive motives, the menace of internal dissensions was a secret contributory incentive to militarism. Nay, taking a still larger survey, the historian will find, in the commercial and financial forces that for several generations had been molding the imperialistic and foreign policies of the Western States, influences which were secretly preparing the way for the in-

evitable conflict. These economic motives were not greater in the volume of human passion that they bore than the other political and social forces with which they coalesced; but they were operated with clearer consciousness and closer direction.

If a society of nations is in the future to replace this aggressive anarchy, the selfish play of these commercial and financial forces must be stopped. They can only be stopped by the establishment of democracies which are at once political and economic, in which the peoples shall control the machinery of industry, trade and finance, sufficiently to prohibit class-war within the nations, while securing international peace.

I cannot in this very brief survey discuss the question how much state-socialism is involved in the process. For the really focal point is whether it is possible for the respective peoples to meet and to combat successfully the array of reactionary forces that will be in actual occupation of the seats of government in every country when the war is over, so as to win possession of their national governments. Their numbers, the mere ownership of the franchise, the formal right to elect legislators, will not suffice. These powers have in some considerable measure long been vested in the so-called "democratic" peoples. They have proved quite illusory. In no one of these "democracies" has the free intelligent will of a people been able to express itself in the legislative and administrative government. Why not? Because the popular will has not been reasonably organized or morally determined.

Hegel truly said, "The people is that part of the state which does not know what it really wants" (was er will). So long as this is true, democracy in any real sense remains impossible. And here lies the very heart of the coming conflict. All the intellectual and moral as well as the financial resources of the ruling and possessing classes that hate and fear democracy (though doing lip service) will be used so to control and dope public opinion as to prevent the formation and emergence of a popular will reasonable enough to master the state, and through the state to reform property, industry and other social institutions. The press, the church, the school, the university, the club, the party machine, the library, the theater, the cinema and other popular recreations, every mode of influencing public opinion through politics, social power and finance, will be organized as never before to check the intellectual and moral growth of real democracy. This is the vicious circle of reactionary powers with which the peoples struggling for political, economic and spiritual sovereignty, will be confronted.

Popular control of government seems impracticable so long as economic oligarchy keeps its hands on the levers of party and the organs of public opinion. But popular control of government is necessary in order to dislodge the economic oligarchy, and to secure the means of liberating, informing and organizing public opinion. In order to break this vicious circle the peoples must conduct a simultaneous attack upon the political, economic and spiritual positions. For only so can the will of the peoples prevail and the world be made a safe, or even a possible, place for democracy.—By John A. Hobson, Author of Democracy After the War, The Evolution of Modern Capitalism, The Industrial System, Work and Wealth, Etc.

HEALTH INSTRUCTIONS.

Provost Marshal General Crowder has called attention to a circular of instructions prepared by the United States Public Health Service for registrants declined in the draft because of physical disability. The circular, copies of which have been placed in all the local draft boards throughout the country, is the result of a recommendation made to General Crowder by Surgeon General Rupert Blue of the United States Public Health Service. The Surgeon General points out that in the first draft about one-third of the men examined were rejected for physical disabilities and that hundreds of thousands will be added as a result of the examinations to be made of the new registrants.

"It is highly desirable," said Surgeon General Blue, "that the men found to be disqualified for military service by the examining physicians of the local draft boards should receive definite instructions as to the meaning of their disabilities and that a strong appeal be made to them to correct these disabilities as far as possible. But the object of this measure is not only to reclaim men for military service or for such service as they can perform, but to lessen the burden of illness and disability among those engaged in essential industrial work. It is hoped that the instruction in this circular, which is really a primer of the physical defects of the nation, will reach far beyond the draft board and be utilized by all agencies interested in improving the public health to instruct the people with regard to their physical deficiencies and the ways and means by which they can be remedied."

According to the United States Public Health Service experience everywhere shows that the proportion of persons with physical impairments is considerably greater in persons betwen 30 and 40 than in those between 20 and 30 years of age. This waning vitality at ages over 30, so commonly accepted as inevitable, can be postponed to a large extent. In this connection, it is pointed out that 60 per cent. of the physical defects found in the last draft were of a preventable or curable nature.

In addition to furnishing all the local draft boards throughout the country with a sufficient number of the circulars to supply one to each registrant rejected because of physical disability, arrangements have been made to furnish specimens of the circular to life insurance companies, fraternal organizations, labor unions, employers of labor and others who desire to reprint the circular in its present official form for wider distribution.

The United States Public Health Service will be glad to furnish specimens of this circular on application and urges all organizations that can reach large groups of people to reprint and distribute the circular and thus contribute materially to the public welfare and the national defense.

The circular issued by the United States Public Health Service is entitled "Information for Guidance and Assistance of Registrants Disqualified for Active Military Service Because of Physical Defects." It is a four-page leaflet, containing specific information relating to the commoner causes of rejection or deferred classification, e. g., Defective Eyesight, Teeth and Disease, Feet, Underweight, Overweight, Hernia, Hemorrhoids, Varicocele, Varicose Veins, Bladder, Kidney and Urinary Disorders, Ear Trouble, Heart Affections, High Blood Pressure, Lung Trouble, Rheumatism, Venereal Disease, Alcohol, Nervous and Mental Disease, and Miscellaneous Conditions. The information is presented in simple form and has been approved by the highest medical authorities. At the end is a striking quotation from President Wilson, "It is not an Army we must shape and train for war; it is a Nation." This is followed by the following personal appeals:

"Do not go through life with handicaps that may be easily removed. Do not shorten your life, reduce your earning capacity and capacity for enjoying life, by neglecting your bodily condition.

"While other men are cheerfully facing death for the cause of democracy, do not shrink from facing a little trouble and expense to make yourself strong, healthy and fit."

Over a million copies of the leaflet have been sent out to the draft boards. Requests for specimen copies should be addressed to the United States Public Health Service, Washington, D. C.

WAR FOOD PRICES.

Figures compiled by the Food Administration show that the farmer, going to market this summer to sell his produce, got $1.27 for every dollar that he received last summer; and the housewife, going to market to buy her supplies, paid 87 cents for every dollar that she paid last summer.

The difference has been saved out of the profits of the middleman.

For instance, the price of flour in the spring of 1917 was $16.75 a barrel wholesale in Minneapolis. This spring it was $9.80 a barrel. The difference between the selling price of a farmer's wheat and the selling price of the flour that was made from that wheat was $5.68 in May 1917. In May, 1918, it was only 64 cents.

These reductions have been made despite the fact that we have taken out of our market enough food to save our allies in Europe from famine. We have shipped 120,000,000 bushels of wheat instead of the 20,000,000 bushels that we thought would be our limit. We have exported 87,000,000 pounds of beef a month instead of only 2,000,000 pounds. And instead of only 50,000,000 pounds of pork a month, we have shipped as much as 308,000,000 pounds.

In a campaign to prevent profiteering and food wastage, the Food Administration in ten months imposed some 815 penalties on wholesale and retail dealers, commission men, millers, canners, bakers, cold storage companies, brokers, grocers, restaurant men and so forth. About 150 companies and individuals have been ordered to abstain from business in licensed commodities either permanently or for stated periods. The others have been regulated by fines or minor penalties. In many more cases, the desired result has been obtained by means of warnings. And besides this work of the Washington headquarters, the Federal Food administrators in their respective states have disposed of a vast number of cases on their own authority.

There is still profiteering going on, and against it the Government is making a broad campaign, but shortage of shipping has become one of the great causes of the high cost of living, and that difficulty can only be overcome by building ships.

The price of bananas has increased because half the banana boats have been taken as army transports. There is a huge crop of sugar in Cuba, Porto Rico and Hawaii, but there are not ships enough to move it. Ocean freight rates on rice and tea and tapioca from China, India and the Straits Settlements have become very high. On tea, for instance, the rate has risen from one cent to five cents a pound.

We used to import great quantities of hides from China, and we bring a tanning extract, called quebracho, from South America. Ocean freight rates on hides have been increased 500 per cent. and on quebracho 600 per cent. Our farmers use nitrate of soda from Chile for fertilizer. The rate on it has increased from $5 to $30 a ton. Equal increases have helped to raise the price of jute and hemp, rubber, tin and wool.

These are part of the inevitable hardships of war. The gradual defeat of the submarine campaign and the gradual suppression of profiteering are working together to reduce food prices. Both take time. But in both success seems assured.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

A Program for World's Peace.

The Interallied Labor Conference has unanimously adopted a committee recommendation that the conference subscribe to the fourteen points formulated by President Wilson as a program for world's peace.

Representatives of the American Federation of Labor, headed by President Gompers, presented these principles, which are as follows:

1. Open covenants of peace, openly arrived at, after which there shall be no private international understandings of any kind but diplomacy shall proceed always frankly and in the public view.

2. Absolute freedom of navigation upon the seas, outside territorial waters, alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.

3. The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.

4. Adequate guaranties given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.

5. A free, open-minded, and absolutely impartial adjustment of all colonial claims, based upon a strict observance of the principle that in determining all such questions of sovereignty the interests of the populations concerned must have equal weight with the equitable claims of the government whose title is to be determined.

6. The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest co-operation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good will, of their comprehension of her needs as distinguished from their own interests, and of their intelligent and unselfish sympathy.

7. Belgium, the whole world will agree, must be evacuated and restored, without any attempt to limit the sovereignty which she enjoys in common with all other free nations. No other single act will serve as this will serve to restore confidence among the nations in the laws which they have themselves set and determined for the government of their relations with one another. Without this healing act the whole structure and validity of international law is forever impaired.

8. All French territory should be freed and the invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly fifty years, should be righted, in order that peace may once more be made secure in the interest of all.

9. A readjustment of the frontiers of Italy should be effected along clearly recognizable lines of nationality.

10. The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.

11. Rumania, Serbia, and Montenegro should be evacuated; occupied territories restored; Serbia accorded free and secure access to the sea and the relations of the several Balkan states to one another determined by friendly counsel along historically established lines of allegiance and nationality; and international guaranties of the political and economic independence and territorial integrity of the several Balkan states should be entered into.

12. The Turkish portions of the present Ottoman Empire should be assured a secure sovereignty, but the other natonalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development, and the Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations under international guaranties.

13. An independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

14. A general association of nations must be formed under specific covenants for the purpose of affording mutual guaranties of political independence and territorial integrity to great and small states alike.

The peace principles of the American Federation of Labor are based on the above declarations by President Wilson.

President Gompers and his associates also submitted these economic principles to the Interallied Conference and urged that they be incorporated in the peace treaty:

In law and in practice the principle shall be recognized that the labor of a human being is not a commodity or an article of commerce.

Involuntary servitude shall not exist except as a punishment for crime for which the party shall have been duly convicted.

The right of free association, free assemblage, free speech and free press shall not be abridged.

Seamen of the merchant marine shall be guaranteed the right to leave their vessels when they are in a safe harbor.

No article or commodity shall be shipped or delivered in international commerce in the production of which children under 16 years of age have been employed or permitted to work.

The basic work day in industry and commerce shall not exceed eight hours.

World's Workers

The powerful British unions of shipwrights, blacksmiths and boilermakers are talking amalgamation and conferences to this end have been held.

The American vice consul at Rio de Janeiro reports, in a recent communication, that a bill has been introduced in the Brazilian Congress providing for the publication of a quarterly labor bulletin to begin with the date of the definite organization of the National Department of Labor, the purpose being to furnish a medium for the exchange of information regarding questions of labor and similar subjects.

The Italian Ministry of Shipping has cabled A. F. of L. headquarters at Washington, D. C., of the safe arrival at an Italian port of the special A. F. of L. mission to that country. The mission is composed of James Wilson, president of the Pattern Makers' League; F. J. McNulty, president of the International Brotherhood of Electrical Workers; John Golden, president of the United Textile Workers; Michael Green, president of the United Hatters of North America, and Peter Josephine of the Granite Cutters' International Association.

The current issue of the British Labor Gazette states that "in July employment continued good in nearly all the principal industries, and much overtime was worked by inadequate staffs. In the cotton and jute trades, however, it continued to be restricted by the regulation of the consumption of raw materials, and short time was worked. Trade unions with a net membership of 1,124,227, excluding those serving with the Forces, reported 0.6 of their members as unemployed at the end of July, compared with 0.7 at the end of June and 0.4 per cent. at the end of July, 1917. The increase in the percentage as compared with a year ago was almost entirely due to the cotton industry."

Polish laborers in Germany are treated little better than slaves, according to such information as has reached America of late. The secret police interfere with meetings of the Farm Laborers' League, ostensibly to find out whether any Poles are participating in them. The German Socialist press points out that such procedure will hardly increase the esteem for Germany abroad, particularly since Germany is supposed to be on friendly terms with Poland. The unions have recently been hampered in many ways by the military authorities. The former Chancellor had given them encouragement in some respects, but his successors have apparently adopted a policy of severe repression.

That there is much suffering in Norway is indicated by the news that the Norwegian Storting or Parliament has been considering the question laid before it by the Royal Department of Provisions, of granting the sum of $2,448,900,000, to be included in the budget for the fiscal year of 1918-19, which shall be used for giving relief to poor people suffering because of the high cost of living in Norway. The money is to be used for the following purposes: Appropriation for war-time flour, herring, and fish, including fish mixed with the bread and margarine; the installation of drying plants for potatoes, etc.; appropriations for public kitchens; and a sum to be placed at the disposal of the Provisions Department for emergency purposes.

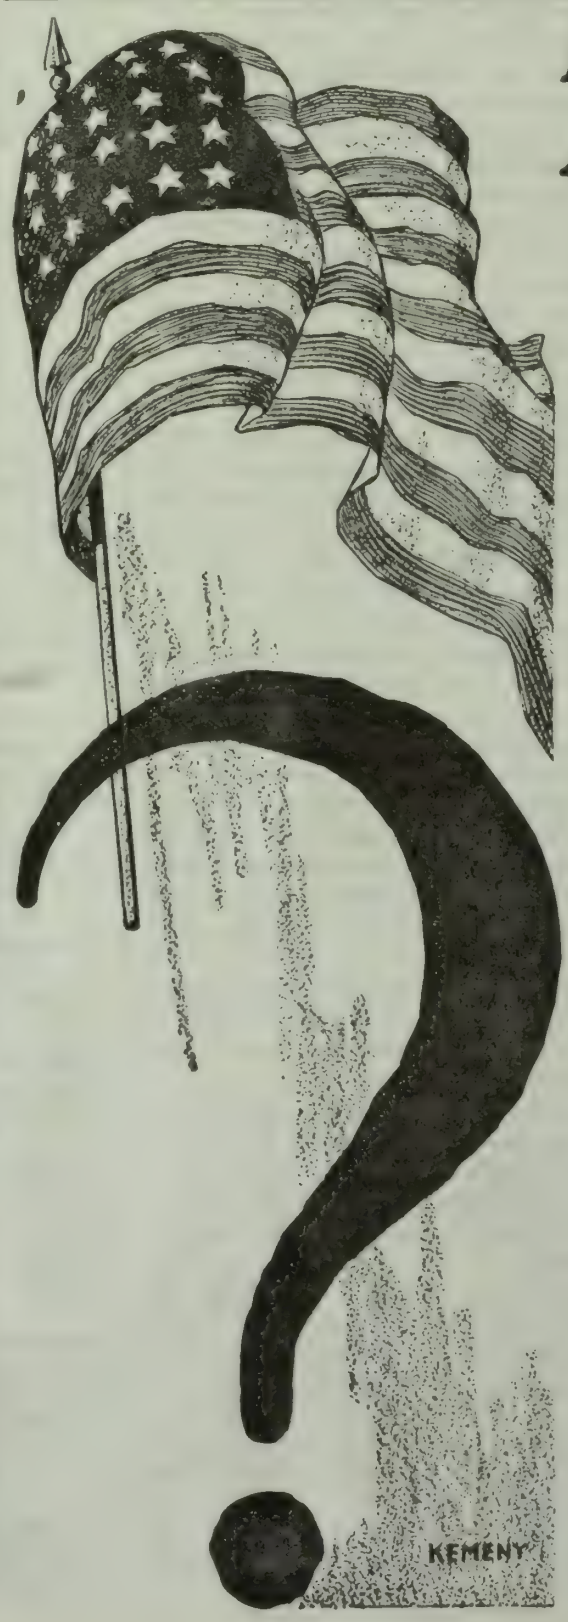
Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18



Does Such an American Exist?

Can there be any American who is not doing all he can to help win the war? Who pretends to believe that we could have kept out?

Who whines or growls about the little sacrifice he is asked to make?

Who gets panicstricken and thinks that it would be better to compromise with the Hun and listens to the serpent whisperings of German propaganda?

If such an American exists let him realize what Germany has done to Russia, which gave in and negotiated a cowardly peace.

There is only one thing for us all today and that is war to the bitter end—war until the Hun is utterly and completely destroyed.

For those who cannot fight, LIBERTY BONDS are the best possible weapons against the Hun.

Pacific Coast Marine.

At noon on September 25 the Foundation Company launched its fifteenth ship for the French Government, the "Aviateur de Terlines." Madame Collette Hamilton, whose husband is a lieutenant in the French Army, now with the American forces in France, christened the vessel. The Foundation Company is carrying out its program of "one every seven days," this being the third ship that has gone down the ways this month.

President Remsberg of the Port of Seattle Commission wired from Washington, D. C., that the United States Army quartermaster department had given assurances that the recently indorsed Harbor Island dock project would be undertaken at once. This pier is to be built by the Government on the assurance that the Port of Seattle would take it over at the end of five years. The proposed pier is to be patterned after existing port properties.

According to advices received from a South Pacific port, two schooners operating from Pacific ports by local shipping men are tied in a race. A vessel belonging to Andy Mahoney arrived at the offshore port after a passage of seventy-four days. Another vessel operated by Walter S. Scammell made the same port about a week ago, after sailing from a local port, in the same number of days. The owners have a wager that will be decided by the actual time each craft makes for the complete round trip.

Narrowly escaping destruction by fire during the passage between Apia and the United States, a schooner owned by the Gulf Mail Steamship Company arrived at a Pacific port during the week with the bulwarks and a portion of the superstructure badly damaged and a considerable portion of the deck cargo of copra missing. The vessel brought 550 tons of copra valued at about $120,000. This was consigned to Atkins, Kroll & Co., who are now handling more of this South Pacific product than any other firm on the Coast.

Owing to the scarcity of bottoms of all kinds, the Union Steamship Company is reaching out in all directions for charters to facilitate the movement of freight that threatens to congest at various points from which the concern operates. It was announced during the week that the schooner "H. K. Hall" had just been chartered to the New Zealand concern by the Puget Sound owners. The "Hall" is registered at 1237 tons, and will probably be used to carry lumber offshore and products from the South Pacific back to the Pacific ports.

The river barge "Pilot," first of a fleet of five craft intended for river transportation in the vicinity of Stockton, Cal., was delivered by the Cryer plant at Oakland to the Fletcher Wheeler Transportation Company during the past week. The "Pilot" is 52 feet long, 13 feet in width and 5 feet deep. It made the trip from the Webster-street bridge to the Crowley boat-house in thirty-seven minutes, at a speed of twelve miles an hour. The craft is equipped with a new type Acme engine of 85 horsepower. The engine is being assembled by a new method which permits fast construction. This was the first of the new lot to be installed in a local boat. The Fletcher Wheeler Company is placing these barges in operation because of the increased demand for vessels in the Stockton district.

Lieutenant Randall Rogers of the alien enemy inspection detail of the Navy and Lieutenant Sam Sackett of the customs inspection service at San Francisco have conducted an investigation into the probable cause of the fire on the Pacific Steamship Company's vessel which was threatened with destruction late last Wednesday night while steaming between ports of the Pacific. A portion of the cargo in No. 2 hold had been damaged by water and steam, but the vessel was not damaged. The biggest loss will be suffered by H. C. C. Cantelow, assistant general manager of the steamship company. Cantelow was sending his household goods to Seattle, and nearly all were destroyed. Quite a few individual tales of heroism were related by the passengers and members of the crew, all of the latter being members of the Pacific District Unions of the International Seamen's Union of America.

With leading business and financial men of Hawaii pointing out that these islands are destined to become a great shipping center at the close of the war when the Pacific begins to come into its own as a bearer of commerce, the territory is beginning to look forward to the development of its harbors, and it is certain that bills for the construction of new wharves on a vast scale will be introduced at the coming spring legislature. Governor C. J. McCarthy, who, before his appointment to the executive office, was an active member of the territorial harbor board for many years, is one of the most ardent advocates of a big harbor extension program. If the 1919 legislature is agreeable, and if the necessary steps are taken, the harbor board may be given power to raise revenues for wharf construction and other purposes by taxing each ton of freight passing over piers controlled by the board. Under the present statute, passed in 1915, there is a little clause which specifically prohibits the board from collecting a tonnage charge on freight handled on the wharves. The only revenue the territory gets at present is a tax of two cents per ton per day on all vessels using the wharves. At this rate their maintenance is a losing game to the territory, and it is likely that a big effort to put a new tonnage act into force will be made at the coming session.

Two American steamships were sunk and a fleet of other craft were badly battered, the city of La Paz, Mexico, was partially destroyed and the floating equipment of the United States naval coal depot at Pichilinque damaged to the extent of thousands of dollars during a terrific hurricane that raged off the Lower California and northwest coast of Mexico September 17. This was the news brought to San Diego, Cal., by a long-overdue fishing launch. The crews of the vessels that were sunk were rescued by passing steamers after being adrift three days in open boats. The American vessels that foundered after a terrific battle with mountainous seas were the steel steamer "Blackford," northbound from an Atlantic port with a cargo of 3000 tons of coal, and the wooden steamer "Coos Bay." William A. Brown, first mate of the ill-fated "Blackford," arrived at San Diego as a passenger on the launch from Magdalena bay. Brown related a graphic story of the loss of the "Blackford." He said that the steamer foundered at a point about 250 miles south of Magdalena bay, after the ship's rudder had become disabled. Drifting helplessly at the mercy of the waves, with two blades of the propeller and the rudder stock twisted into a useless mass of bronze and steel, it was seen that the craft could not much longer remain afloat. The crew of forty-six men were then ordered to the boats. On September 20, three days after the "Blackford" foundered, the boats were sighted and picked up by an oil tanker. The tanker, with the crew of the "Blackford" aboard, remained in the south, short of fuel and provisions. No details of the loss of the "Coos Bay" have been received here, with the exception that the wooden craft foundered about fifty miles from where the "Blackford" went down. The crew were landed at a Mexican port.

Claude Daly, manager of the maritime department of Comyn, Mackall & Co., has returned from a visit to Australia, where he went to examine trade conditions and to get in touch with the various representatives of the company in the commonwealth and New Zealand. During the next two years there will be little available tonnage to care for any considerable increase in the business with Australia and New Zealand. There is a world of money down there to be exchanged for good American merchandise, but the ship space will not be available. In the meantime the Japanese have been busily engaged in building and purchasing ships, and fully 60 per cent. of the tonnage arriving in the South Pacific consists of the Mikado's vessels. Daly said the Japanese methods were not entirely satisfactory to the Australians, and that the Americans were, on an average, turning out a better grade of merchandise. The question of priority affecting goods being sent to Australia and also goods shipped from this country was an effective barrier to increasing the business largerly at this time. Wheat and wool may be sent to this country, but there are so many restrictions on merchandise in general that a considerable American business is not expected to develop. He found upon his arrival at Sydney that there was a general impression that he had come there for the purpose of building concrete ships. This mistake was so general that some of the members of Parliament wished to know if the Government was defraying Daly's expenses. The visitor hastened to assure the Government officials that he had not come there to work on concrete ships, and then the excitement subsided. It developed that a newspaper story in a Sydney paper was responsible for the misunderstanding. Daly said that all of the necessary materials for concrete shipbuilding were at hand in Australia, and that there was nothing to prevent the Government or private concerns from entering upon this class of ship construction.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

Headquarters of the Sailors' Union of the Pacific, 59 Clay Street, San Francisco.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, OCTOBER 2, 1918.

"INSCRIPTION MARITIME."

The British Board of Trade and the Shipping Controller are arranging for the compilation of a complete register of all masters, apprentices and seamen (that is, all seafaring officers and men), so that an effective comparison may be made between the present supply and the demand which may be anticipated in the near future. The opportunity of this registration will be taken to furnish each man with an identity and service certificate, which, after being indorsed by the National Service Ministry, will be a protection from recruitment, so long as the holder fulfills the conditions of his employment in the Mercantile Marine. The identity and service certificate is to be produced by the man whenever he is engaged for service afloat, and will at first only be issued to bona fide sea-going men. The scheme will be worked in close conjunction with the Seamen's Unions and Associations of the Mercantile Marine Officers. In future, account is to be taken of the actual sea service of every seaman, and it will be a condition of his protection from recruitment that he serves afloat for a minimum number of days every year, due allowance being made for exceptional circumstances.

The current issue of the British Marine Cooks and Stewards' official publication expresses some dissatisfaction with the registration scheme. However that may be, there can be no objection to any reasonable proposal along these lines, as a war measure.

In our own country there is a small but very persistent element at work urging the adoption of the French system, known as "Inscription Maritime."

Those who favor maritime inscription as a permanent policy for America are doubtless strong on theories but they surely are decidedly weak in knowledge of historical facts. It cannot be possible that they have read our own Captain A. T. Mahan's great historical works on the "Influence of Sea Power," the importance of which was conceded at the time of their publication, and are still in constant demand.

Among other great historical truths on which Captain Mahan "proved up" we have learned beyond the question of a reasonable doubt that France in all her sea wars against Great Britain was never able to find the required supply of skilled seamen. In the long run that alone settled the wars against France. It was compulsory inscription and compulsory service for a long period of years which caused the French seafaring population to diminish. England, on the other hand, with her more liberal laws pertaining to seamen and without any attempt to regulate every move of her seafarers, slowly but surely gained control of the seas. Great Britain's seafaring population, then as now, was the deciding and determining factor in many, many a struggle upon the sea.

Just at present America is straining every muscle to again obtain a real foothold upon the sea. We are building ships as never before. We are inducing our ambitious young men to take up a career as mariners. Surely, it behooves us to carefully examine the matter-of-fact lessons of history before accepting any proposal which would materially change the status of American seamen.

Enthusiastic theorists are well enough in their place, but the future of our country upon the sea must be made secure by practical men—men with a vision as well as a speaking acquaintance with fundamental historical truths.

AMERICAN CITIZENSHIP.

The U. S. Shipping Board Recruiting Service desires to emphasize the fact that the training given applicants for places in the new Merchant Marine is for American citizens only.

There is, of course, no distinction made between native-born and naturalized citizens. Still, it appears that such a question is raised from time to time. The "Merchant Mariner," published by the Shipping Board Recruiting Service, comments upon this needless querying in the following pithy paragraphs:

There is no reason why such a question should be asked. In a republic a citizen is a citizen. He may have been born in Europe, of parents who at the time of his birth had no dream of ever seeing themselves or their son leave the home acre where he came into the world.

This is a place of wonders, this country of ours, and the conversion of the foreign born into good Americans is not the least of its wonders.

The machinery of the courts make of the right kind of men of foreign birth as good citizens as nativity on Cape Cod and ancestry going back to the "Mayflower." Incidentally it is always well to remember that the Pilgrim Fathers were foreigners.

Very often young men come to the enrolling stations of the Recruiting Service who have not been naturalized, but who have taken out first papers. Some of these feel grieved because they are rejected. To these the recruiting Service can only say, "You have started in the right direction. Hurry and finish the job. Then we will gladly take you into the Merchant Marine."

This war has served one excellent purpose, in speeding the naturalization of a good many men who thought in easy-going peace times that there was no particular reason for hurrying their naturalization. They see now that there is every reason for letting not one spear of grass grow under their feet before they get the precious final papers that make them an American citizen.

The editor of the "Merchant Mariner" is to be congratulated for penning so lucid an "explanation."

There is now, fortunately, no longer any question about the value of American citizenship. To-day every American citizen is justly proud of that distinction.

And what has made "American Citizen" one of the proudest titles on earth?

The pages of history that record the days of Rome's greatness and glory, note particularly the value a Roman placed on his citizenship. The Roman always pronounced with pride "Civis Romanus." Yes, we find in the tribunals of justice when the prisoner was asked if he was a Roman citizen—we can almost see his manhood assert itself, and the voice clothed in pride cry out "Ego Sum."

What did that "Civis Romanus" mean? It stood for monarchy; for slavery; for might over right. The pride of the Roman was begotten from the many bloody victories won by Roman armies, from her treasures, the wealth carried by her legions to her capital.

Not so our pride when we proclaim our title, "Civis Americanus." Our pride is not prompted because our land is the Eden of the earth. We know on earth's orb there is no other region so rich, so bounteous as our own America; but our pride has a higher source. "Civis Americanus" means that we are clothed with a citizenship that has put a ban upon slavery and places all men as the Creator intended—free and equal. Moreover, American citizenship is to-day proudly meeting the most severe test of all. It is cheerfully and willingly sacrificing itself at the altar of Mars to make human freedom an accepted world institution—forever safe from the attacks of any military monster.

DID YOU BUY YOUR BOND?

While Germany's ears still burn from the curt refusal of President Wilson to consider its peace offer, a further humiliation is in store for the Kaiser and his befooled people when the voice of America is heard unanimously backing up that refusal through the Fourth Liberty Loan.

The loan is a necessary material factor in the prosecution of the war; not only our own military efforts but those of our allies depend upon the funds thus raised; the allied civilian population will get their food largely from that portion of the Fourth Liberty Loan we lend their governments.

It is no less an important factor in maintaining the allied morale. No worse blow to German hopes will be dealt than they receive in the news, at the close of the campaign on October 19, that the world's greatest financial effort has been triumphantly achieved in the short space of three weeks.

Germany is at this time floating its ninth war loan. In spite of her relatively small national wealth of only $80,000,000,000 she has thus far, through high interest as well as exerting extreme pressure on her people, succeeded in financing her war efforts.

Her hopes of solving her financial chaos have been largely buoyed up by the Chimera of huge indemnities to be collected from her vanquished enemies.

The Fourth Liberty Loan will bring home to her that now, as one hundred years ago, America stands ready to raise "Billions for Defense, but not one cent for Tribute."

Germany has not yet lost hopes of victory. The war will not end until there has been further bitter sacrifices of American lives. Nothing less than the most earnest financial sacrifices here at home will provide our tremendous army with the munitions necessary to absolutely crush the Kaiser's actions.

It is up to every man and woman of us to adopt the same grim determination to make the Fourth Liberty Loan an overwhelming success as our fighting men abroad resolved to make every attack a victory although it means death itself.

Buy your limit of Liberty Bonds today!

THE MANUFACTURE OF "MINES."

Production of "mines," that dreaded terror of the sea which can be used so effectively in offense and defense, is now said to be so well developed that America alone has a daily output of one thousand, complete in every detail.

This means that, should the exigencies of naval warfare require it, the Navy Bureau of Ordnance could produce annually 365,000 mines. The bureau, however, is keeping so far ahead of mine requirements of American and allied naval forces in European waters that it is unnecessary to work on mine assembly or loading either Sundays or holidays.

If all the mines produced by the Bureau of Ordnance since our country entered the war were planted (the same distance being maintained between the mines as in mining operations at sea) the mine belt would cross the Atlantic eight times. This satisfactory condition of mine production is the result of the development and standardization by the Navy Bureau of Ordnance, since the war began, of a new type of American mine. This new mine has all the advantages of the older types and practically none of their disadvantages, this being particularly true in their loading and laying. The new mine must be one of the safest in the world to handle, for there has not been an explosion or accident either loading or laying. Yet experience has proved that these mines are a tremendously potent anti-submarine weapon.

In the design of these mines special care has been taken to fulfill all requirements of the Hague convention. Should the mine break adrift from its anchor it is immediately rendered inactive by internal mechanism placed there for that specific purpose, and it floats on the surface where it can easily be destroyed. Should a ship strike a floating American mine the firing mechanism would not function.

To obtain these mines in such enormous quantities, as well as to preserve secrecy regarding their characteristics, a radical departure from usual manufacturing methods was adopted. Naval plants did not possess facilities for manufacturing as many as 1000 mines per month, and such plants were congested with other work. It was impracticable to develop a great plant for the sole purpose of manufacturing mines, since there was not sufficient time for this purpose. The expedient was, therefore, adopted of dividing the mine into many parts and having these manufactured at different commercial plants, all the parts being brought together and assembled, the mine being then loaded at a central mine depot. The work was divided among 140 principal contractors and more than 400 subcontractors.

The unit cost of the new mine is about one-half that of mines before the war, notwithstanding the prevailing high cost of labor and raw materials. This is due to the fact that all the elements of the mine have been standardized in the same way that passenger automobile parts are standardized and that quantity production methods are followed.

A copy of the JOURNAL's index for Volume XXXI has been mailed to each library and to such other institutions where issues of the JOURNAL are preserved for binding. If anyone has been overlooked please apply promptly to the Business Manager of the JOURNAL.

The thrifty housewife should be careful that in buying at a bargain she isn't selling somebody's job at a sacrifice.

PROTECTION FOR ENLISTED MEN.

What the United States Government Is Doing for Our Fighting Men and Their Dependents at Home.

The United States Government provides three forms of financial protection for its fighting forces and their families:

(1) Allotments and Allowances.

Every enlisted man in the active military or naval service is under a duty to allot $15 a month from his pay to his wife and children. To these compulsory allotments the Government adds family allowances, ranging from $5 a month for a motherless child, and $15 for a wife without children, up to a maximum of $50. The compulsory allotments are the same for all enlisted men, regardless of rank or pay. Provision is also made covering instances of a divorced wife to whom alimony has been decreed and who has not remarried.

In addition to the compulsory allotments, the enlisted man may also make voluntary allotments to his parents, grandparents, brothers, sisters, or grandchildren, and, if they are dependent upon him for support, the Government may add certain monthly family allowances. Not more than $50 in family allowances will be paid on account of any one enlisted man.

If the enlisted man is already making a compulsory allotment to his wife and children, he need allot only $5 additional to his brothers, sisters, parents, grandparents, and grandchildren, if he claims a family allowance for them. But if he is not making a compulsory allotment, he must allot $15 to such other relatives to obtain a Government allowance for them.

By this system of allotments and allowances the enlisted man and the Government together make provision for the loved ones left behind.

(2) Compensation for Death or Disability.

This compensation is the modern American substitute for the pension. It applies to officers and enlisted men alike when employed in active service, regardless of rank or pay, and is payable for death or disability incurred in the line of duty and not caused by their own willful misconduct.

In case of death, compensation, which ranges from $20 to $75 a month, is paid to the soldier's or sailor's widow, children, and dependent father or mother. No other relatives are entitled to compensation. The compensation may be paid to a widow until remarriage, and to a child until the age of 18, or until marriage.

In case of disability compensation is payable to the disabled person himself. If the disability is total, the amount of compensation varies from $30 to $95 per month, according to the size of the disabled man's family. In exceptional cases a sum not exceeding $20 per month additional may be paid for services of a nurse.

If the disability is partial, the compensation is a percentage of the compensation that would be payable for total disability and the amount varies according to the size of the disabled person's family and the reduction in his earning capacity. In certain specific cases of total disability, such as the loss of both feet or both hands or both eyes, or for becoming helpless and permanently bedridden, compensation is payable at the rate of $100 per month.

Compensation for death and disability should be clearly distinguished from the Government insurance protection, which is entirely separate.

(3) Government Insurance.

In addition to the compensation for death or disability, the United States offers its fighting forces the further protection of Government insurance. This insurance is protection against death or total permanent disability. It is granted, on written application, to all persons in the active military or naval service, enlisted, enrolled, drafted, or commissioned, so long as the premiums are paid as they become due. No medical examination is necessary other than a favorable report by the Army or Navy surgeon or medical examining board before acceptance into the military or naval forces. Because the Government bears all overhead expenses and the extra war hazard, the cost is extremely low. The terms are so favorable and the protection so broad that the matter naturally commends itself to all men joining the colors. The premium rate depends on the man's age, and for the full $10,000 averages between $6 and $7 per month.

To obtain this Government insurance, the man must apply within 120 days after he enters the active military or naval service.

In case of death of a person having so applied for $10,000 insurance, the Government will pay, so long as there are persons living who are entitled to receive the same, monthly installments of $57.50 each for 20 years, which, taking interest in account, aggregate $13,800. The insurance cannot be made payable to anyone except those included in the "permitted class," namely, spouse, child, grandchild, parent, brother, sister, as defined in the War-Risk Insurance Act.

In case of total permanent disability these monthly installments of $57.50 each will be paid to the disabled person throughout his life even though he lives for more than 20 years.

Provision is made for the continuation of this Government insurance after leaving the service.

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Hadquarters, San Francisco, Cal., Sept. 30, 1918.
Regular weekly meeting came to order at 7 p. m., Frank Johnson presiding. Secretary reported shipping good. Shipwreck Benefit was awarded to nineteen members of the crew of the ship "Tacoma."

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Sept. 23, 1918.
No meeting. Shipping slow; men scarce.

J. ETCHELLS, Agent.

Room 11, de Cosmos Block, 1424 Government St.

Vancouver, B. C., Sept. 23, 1918.
Shipping fair.

WM. HARDY, Agent.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Sept. 23, 1918.
No meeting. Shipping and prospects fair.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, Sept. 23, 1918.
Shipping medium.

P. B. GILL, Agent.

84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Sept. 23, 1918.
No meeting; no quorum.

ED. ROSENBERG, Agent.

P. O. Box 6. Tel. Main 557.

Portland Agency, Sept. 23, 1918.
Shipping good; members scarce.

JACK ROSEN, Agent.

88½ Third Street. Tel. Main 6013.

San Pedro Agency, Sept. 23, 1918.
Shipping good; members scarce.

HARRY OHLSON, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Sept. 16, 1918.
Shipping dull.

R. H. BLACKWOOD, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Sept. 26, 1918.
Regular weekly meeting was called to order at 7 p. m., Eugene Burke in the chair. Secretary reported shipping good. The full Shipwreck Benefit was ordered paid to one member wrecked on the ship "Tacoma." A resolution to vote upon the purchase of $2000 of the 4th Liberty Bond issue was referred to a referendum vote of the coast.

EUGENE STEIDLE, Secretary.

42 Market Street. Phone Kearny 5955.

Seattle Agency, Sept. 20, 1918.
No meeting. Shipping fair.

LEONARD NORKGAUER, Agent.

Grand Trunk Dock, Room 203. Phone Main 2233. P. O. Box 214.

San Pedro Agency, Sept. 18, 1918.
Shipping very good; shipping good, but short of members.

Sepulveda Bldg., 128½ Sixth Street. Phone, Home 115; Sunset 66 W.

DIED.

Robert D. Hendersen, No. 2630, a native of Denmark, age 50. Died at Libbyville, Alaska, June 8, 1918.

A. P. Traynor, No. 1100, a native of Ireland, age 39. Died at Victoria, B. C., Sept. 18, 1918.

Interest in Portland, Oregon, as an export port is developing, and, while plans are being matured for operating companies to handle the trade after the war, outside shipping firms are establishing offices in the city to get a first hold on the business. The Sudden & Christenson Co. of San Francisco was the first to locate there, and has been taking ships from the Emergency Fleet Corporation for operation out of Portland and other Pacific ports. Lyng & Ricks, San Francisco, is the latest firm to enter the lists. Offices for this firm have been opened and plans are being made for regular operations of ships from Portland.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

So serious has become the situation at Bridgeport, where the workers belonging to the Machinists' Lodge have appealed for another interpretation of the Eidlitz award which caused the recent strike, that the National War Labor Board has broken its date for hearings in Minneapolis for September 23 and has gone to Bridgeport instead.

Under the Eidlitz award, the men and women employed in the war industries in Bridgeport were to meet in the school houses and elect delegates to a city convention, which in turn was to name candidates for the Central Appeal Board. This Central Board was then to arrange for the election of shop committees for each shop. During the strike the elections were held. None of the strikers could vote. All the voters and all the persons elected as delegates to the convention were non-union—the union men were all out. But the shop committees are still to be chosen, and the union men, who are in the proportion of about one to nine of the unskilled, non-union employes, are likely to be elected to fill most of these shop committees.

It is unlikely that the War Labor Board will be able to so reverse the award as to give the Machinists the trade classification for which they struck, but it will give them a way to secure the classification within a few months.

The most unfortunate thing about the Bridgeport trouble is the fact that the 90 per cent. who are unskilled are not now being organized, as they easily could be organized, into the American Federation of Labor. The organized men in the town know just what they want. The unorganized have only the vaguest notion.

In the absence of the clear industrial thinking that comes with unionism, the War Labor Board has started a new experiment. It has employed a community secretary for each of the nine public schools in Bridgeport, together with a general secretary for the entire city. These secretaries have charge of arranging meetings of all sorts of groups, but especially of labor groups, in the school buildings. All the workers are to be brought in, so far as possible, to these community meetings, to discuss their industrial conditions and to learn to work together in meeting them. At the first of these meetings, the coming week, Miss Margaret Wilson, daughter of President Wilson, has been invited to speak. She has been active for some years in the movement to open the school houses, all over the country, to community meetings of this kind. Frank P. Walsh of the War Labor Board has been a leader in the same agitation.

On its way to Bridgeport the War Labor Board made public in New York City the award of Chief Justice Clark of the North Carolina Supreme Court as umpire in the case of the Wheeling Mold & Foundry Co. Justice Clark establishes in this award the genuine eight-hour day. He provides that the only way in which more than eight hours can be worked is through the decision that an emergency exists in connection with a particular job. And that decision must be the decision of a committee composed of the workers and the management, equally represented.

This is a pivotal decision. Justice Clark was chosen by the board as umpire in this case, and his ruling that the eight-hour day must be an eight-hour day in good faith, and not a ten-hour day with a few cents of overtime, is to be applied to all similar cases as they shall come before the board.

In the course of his statement, Justice Clark points out that while the principles on which the War Labor Board was established do not require the enforcement of an eight-hour rule, yet they do require that in cases where the basic eight-hour day is not mandatory by law "the question of hours of labor shall be settled with due regard to Governmental necessities and the welfare, health and proper comfort of the workers."

He quotes President Wilson's address to Congress on the railroad eight-hour dispute, in August, 1916, when the President said of the eight-hour day: "It has been adjudged by the thought and experience of recent years a thing upon which society is justified in insisting, as in the interest of health, efficiency, contentment and a general increase of economic vigor." He quotes also from Judge Alschuler's decision in the packing house workers' case, and he declares that the time is here to establish the shorter day in industry. When overtime is to be worked, he believes that the emergency should be one that the workers themselves will readily recognize and accept.

This eight-hour award is a valuable addition to the series of points decided thus far, which the War Labor Board will apply in other cases as they are taken up. Some anxiety has been shown, in various cities, because the Board has not come promptly to hear their local disputes and act upon them. The War Labor Board is still in the stage of developing its organization, trying out its ability to handle various kinds of industrial statesmanship, and of getting local machinery started to take care of the enforcement of its awards. But the field is now becoming pretty well defined, and the Board is striking a gait that will carry it over a very long circuit within a few months. Hearings will be held in all the cities to which pledges have been given, with only a very few days of delay. Minneapolis, for example, will be visited within ten days or two weeks, according to the best estimate today. The Bridgeport trouble, due to an award by an umpire who proved to be out of sympathy with organized labor, has only temporarily upset the schedule.

Mention of the railroad men's eight-hour dispute recalls the fact that one of the members of Congress who most actively fought that legislation was Simeon D. Fess of Ohio, now chairman of the Republican congressional campaign committee. When asked, in debate in the House last New Year's day, why Ohio gave so big a vote for the President in 1916, he replied that one of the chief reasons was the "shameful surrender" of the Administration to the railroad brotherhoods.

The brotherhoods are reminding Fees' constituents of that fact this year. They are also sending into the districts of a large number of other Congressmen the report of their legislative agents on the labor records of those Congressmen. Especially bad, they declare, is the record of Representative Miller of Duluth, whose opponent is a member of the Brotherhood of Locomotive Engineers. Miller has voted against almost every domestic measure in which organized labor has taken any interest, including the Adamson law.

The National Security League and other similar organizations appear to have taken the job of opposing the labor members of Congress in this election, and presumably they will support Miller. This prospect annoys the railroad brotherhoods. Director-General McAdoo has withdrawn—at least for the period of this year's campaign—his order that railroad employes should not run for public office, and the brotherhoods are doing more work in that field now than ever before.

Arthur Holder, former legislative agent of the A. F. of L., was one of the crowd of liberals who gathered at the lunch of the Round Table Forum, the other day, to ask questions of Chairman Colver of the Federal Trade Commission. This Round Table Forum has been organized by the National Popular Government League, to keep public officials and others, here in Washington, in touch with the real fights that are going on in Congress. Just now the big fight is over the stockyards and wholesale meat houses and warehouses. The Federal Trade Commission wants Congress to take them into Government ownership and operation.

Holder asked just one question: "When will the price of steak come down?"

Colver answered: "As soon as there is a free channel of trade between the farmer who produces the livestock and the consumer who eats the meat at his table."

The packers are hanging on to their monopoly of the marketing channels.

* * *

Miss Julia O'Connor of Boston, leader of the telephone operators' strike there, has been named by Postmaster General Burleson to his committee on wages and conditions of labor of the employes in the telephone and telegraph service. But what is more significant, he names her as "representing the organized telephone workers of the country." That is his first recognition of anybody, in any line of public service under his control, as a representative of union labor.

The Commercial Telegraphers' Union is organizing, and waiting, and watching these gradual concessions to the spirit of the times.

FROM FRENCH WRITERS.

French sentiments are expressed in the following:

Despotism is a criminal attack upon the brotherhood of man.—Fenelon.

Political liberty: The happy mean which makes all citizens subject to the laws and equally interested in their observance.—Montesquieu.

There is only one kind of equality inherent in man; it is that of the virtues.—Malesherbes.

Equality is the beautiful ideal of the body politic.—D'Alembert.

To renounce our liberty is to renounce the equality of man, the right of humanity and even our duty.—Rousseau.

It is this celestial voice (of the will of all) that dictates to every citizen the precepts of public reason and teaches him to act according to the maxims of his own judgment.—Rousseau.

God and liberty. (Voltaire's words when blessing Benjamin Franklin's grandson.)

Analyze almost any radical "ism" and you will find that it is composed mainly of solecism and cynicism.

STEEL TRUST BECOMES GENEROUS.

The United States Steel Corporation has announced that it will inaugurate the eight-hour basic day in all its plants on October 1st. This revolutionary measure directly involves 225,000 employes of the big steel combination, and indirectly several hundred thousand employes of independent steel companies. And probably before the effects of it are over it will mean that every working man in America will be put upon an eight-hour basis.

Four months ago, Judge Gary, chairman of the Board of Directors of the United States Steel Corporation, stated definitely and positively that the question of the hours of labor had been acted upon by his board and that there would be no eight-hour day in the steel plants. And now he comes along and throws this resolve into the waste basket, and, almost over night as it were, establishes the basic eight-hour day in all the corporation's monster plants.

Why this sudden change of front? The answer is not difficult to discover. It is to be found in the great campaign the American Federation of Labor and twenty-four international unions are now carrying on to organize the iron and steel workers of the country. This campaign is proving an unprecedented success. In the Calumet District around Chicago, which includes Gary, Indiana Harbor, South Chicago, and Joliet, it has been making tremendous headway. Monster meetings are being held and thousands of workers are pouring into all the affiliated organizations. Never in the history of the country has the like been seen. While this is going on in the Chicago District, the workers in the great Bethlehem Steel plants are likewise organizing by the thousands, and extensive preparations are on foot for similar campaigns in the other steel districts of the country.

Something had to be done to head off all this organization work. In the old days the proper thing for the steel barons to have done under the circumstances would have been to import a corps of gunmen and shoot the thing to pieces, to force the workers out in some ill-timed strike, or, if these failed, to give them a penny or two an hour increase. But the time for the success of these tactics is now past and newer methods must be employed. Hence, Judge Gary's revolutionary ruling that the eight-hour day would be put into effect at once.

The scope of this decision is far-reaching enough to almost bewilder the imagination. It means shortening the hours of labor of every man on the American continent. We may rest assured that the great steel barons never ventured to take such a radical step unless they were perfectly certain that it would accomplish the thing it was aimed to do; namely, to prevent the organization of the steel workers. But will it succeed? We doubt it most seriously. The steel workers now have the spirit of organization and nothing in the world can stop them, if organized labor will go seriously into the work of bringing them into the various organizations and lend them its every ounce of strength.

What the Gary steel workers think of the "gift" from their masters, the steel barons, may well be judged by the fact that the day that the eight-hour announcement was made with enormous headlines in the local papers about 10,000, most of them already in the organizations, assembled in a monster mass meeting and cheered to the echo every mention of the American Federation of Labor and trades unionism in general, and nearly 1500 of them enrolled at the meeting. As this communication leaves this office, a half dozen clerks have been working all day in the headquarters at Gary signing up the steel workers employed on the night shifts. About the same thing is going on in Joliet and the other steel towns in the Chicago District.

Now is the time for organized labor to get behind the steel workers in their efforts to organize. They are faced by the strongest and most ruthless foe in the world's field of industry. A foe who, to crush them, would violate every law of God and man and, if necessary, would give them an ephemeral concession. If the steel workers win out it will be the greatest thing that ever came to working men since the day the first two workers struck hands and said, "Let's unite and demand better conditions." It will mark an epoch in the history of labor. Now is the time for the American Federation of Labor and its affiliated organizations to show what they are made of and to meet with renewed energy this latest tactic of the steel corporation to keep its men unorganized.

Fraternally yours,

WM. Z. FOSTER, Secretary-Treasurer,
National Committee for Organizing Iron and Steel Workers. Room 708, 166 W. Washington Street, Chicago, Ill.

THE ELOQUENCE OF SILENCE.

(By Chester M. Wright.)

There is no eloquence more forceful than the eloquence of absolute silence.

Nothing in all of France drove home to us, as we went from seaport to battlefront, told the story of France as the graves of France told it to us.

Not all of the wondrous orators of France could tell a story as vivid or as impressive as the story told by the scattered graves of those who have died to save the institutions of freedom.

You start from Paris for the front, thinking more of what you have left-behind than of what lies ahead.

You come soon to the line at which in 1914 the Germans were stopped in their drive on Paris. And then you begin to think of what lies ahead, for you are on ground that has been fought over—ground on which the price of liberty has been paid.

The graves of dead men always are where battles have been fought. And here are the graves of dead men—little groups of graves here and there, always on some gently sloping hill. And as long as you follow the line of battle you find it marked by graves.

In one group there will be but a dozen mounds, in another fifty, in another a hundred or more. And over each a simple wooden cross bearing the rosette of France for her fallen sons.

No shaft of marble could be as impressive as the simple wooden cross, roughly made, sometimes standing at an angle, over the silent mounds. No costly vault could half so eloquently bear testimony to the worth of human character.

Just crude heaps of earth, here and there surmounted with a bit of growing green, or a struggling flower, always bearing the unpainted cross; just eternal silence.

And we passed many of these resting places. We passed them always in silence, in poor tribute to those who had performed the ultimate in service to the common cause.

There seemed to come from these graves the very spirit of Liberty's cause. There was about them the dignified humility of democracy and faith in humanity.

It seemed beautiful and natural, too, that these graves should be as they were—it was rest everlasting after the ultimate of effort.

No graves of autocracy could be as these graves were. No tombs could be so placid under tyranny. No rough hillsides could be so dignified under the iron heel.

Here, in these wind-swept graves on the serene hillsides of France, lie men who gave gladly of life itself for the security and freedom of mankind. It was over such hallowed mounds that Lincoln spoke at Gettysburg. It was such humble graves that glorified Lexington and Concord.

But out of the humility of these last resting places humanity will make a shrine of liberty at which men and women for all time will bow in reverence and from which they will draw deep inspiration in the ages and ages to come.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

Trial by jury shall be established.

The American trade unionists proposed a world labor congress at the same time and place as the peace conference and also direct official representation of workers in the official delegations of each of the belligerents formulating the peace treaty.

Porto Rico Protests Are Getting Results.

A long editorial in the San Juan, Porto Rico, Times, indicates that the agitation by trade unionists in Porto Rico and the United States against social conditions in this island is proving effective.

A commission to be appointed by President Wilson to come to Porto Rico has evidently convinced the Times that the old order has passed and now it acknowledges that many things trade unionists protested against are true.

Labor's protest against the un-American Governor Yeager are indorsed by the Times in these words:

"They (the commission) may find that he is not much of a war governor, that his bureaucratic schemes are inconsistent with the genius of the American government; that his Americanism is weak, when and where it ought to be strong; in short, that he is a good, honest man out of place—a political mistake, and too old to be repaired.

"In our opinion the Governor cannot handle questions involving great industrial problems; not because he is inherently unable to do so, but because it is too late in life for him to learn a new trade. So the commission will find the labor-industrial problem just where it has been for two or three aggressive years on both sides."

The above would indicate that the sugar and tobacco interests and other large employers would be willing to make Governor Yeager the scapegoat for debasing conditions they have forced on the workers of this island.

Another interesting portion of the editorial is its condemnation of Santiago Iglesias, President of the Free Federation of Porto Rico Workingmen. Iglesias is also a member of the Porto Rico Senate and through his persistence attention has been called to deplorable conditions here. Now the Times is ungracious enough to say that Iglesias endangered life and property.

Army Officers Accept Trade Union Theory.

The Ordnance Department of the War Department announces that "it has been found that where living conditions are bad and housing arrangements inadequate, ordnance production lags."

The Ordnance Department supplies General Pershing with ammunition and its investigators have found conditions that must be removed before workers can produce their best. These hard-headed army officers now accept organized labor's theory, which has long been resisted by employers.

In several Alabama towns the "prominent citizens" are enthusiastic over their discovery and are giving every aid to the Ordnance Department to make these places livable.

A public market has been established for the towns of Tuscumbia, Sheffield and Florence, where farmers dispose of their produce to representatives of government plants. Government wagons cart the produce to these factories, where it is sold to the workers at cost. Central bureaus for the three towns have tackled the housing problem and parks and playgrounds are being planned.

Army officers report that an investigation of the large labor turnover in another town showed that sewers in the overcrowded residence sections were back filling into private cellars because of inadequate pumping facilities. It remained for the Ordnance Department's representatives to show war munitions manufacturers that if the town's finances would not permit of the purchase of a new pump, that it would be good business for them to stop their costly labor turnover by installing the pump themselves. The manufacturers accepted the hint.

Altoona Then and Now.

The Altoona, Pa., Times compares this year's Labor Day with those before Government controlled railroads when most of the employees of the Pennsylvania Railroad were non-union.

"They were non-union," says the Times, "not because they did not believe in the efficiency of the union organization, but because the officials of the corporation objected to them organizing.

"Every effort of organizers to invade the city was frustrated. It was tacitly but generally understood without the formality of written notice that the employee who dared sign the application blank of a union organizer would forthwith lose his position with the Pennsylvania Railroad. This implied threat was actually carried out, although in the guise of indefinite furlough or some such other sinister cause."

Land for Soldiers on Return from France.

"We can have a job at good pay for every soldier who returns from France if Congress will give us the financial support needed," said Secretary of the Interior Lane, who is taking advantage of every opportunity to press home the need for utilizing the millions of acres of waste land in this country.

The preparation of a program looking to providing farms for these soldiers has been assigned to A. P. Davis, director and chief engineer of the United States Reclamation Service.

"This plan," said Mr. Lane, "has received the indorsement of so large a percentage of Congress and the press of the country that it appears to be a probable program; it certainly is a practicable one. We have but $200,000 now for preliminary surveys and reports, but this will be increased undoubtedly by the incoming Congress. There is enough waste and undeveloped land in this country to give every soldier a farm, but of course no such program is contemplated, because all would not want farms."

Safety First and Bible.

Will J. French, of the San Francisco Typographical Union, quotes the Bible to support the "safety first" movement of the California Industrial Accident Commission, of which he is a member.

In a recent address to medical men, he said:

"The earliest reference to 'safety first' I have been able to find is in chapter 22, verse 8, of Deuteronomy, the fifth book of Moses, where these words appear: 'When thou buildest a new house, then thou shalt make a battlement for thy roof, that thou bring not blood upon thine house, if any man falls from thence.'

"The foundation of English common law is taken from the five books of Moses, from Genesis to Deuteronomy, and we can there read much that represents the highest ideals of present-day civilization. If they used emery wheels in those days, I think we would be able to read a verse following the one quoted about like this: 'When thou grindest tools on the emery wheel, thou shalt use a hood over the wheel and goggles over thine eyes, that thou bring not blindness upon thine house because of dust entering the windows of thy soul.'"

Insurance Man Alarmed.

M. J. Cleary, president of the National Association of Insurance Commissioners, is alarmed at the Government's industrial policy. Taking over railroads, means of communication, etc., may be all right in wartime, but even then, argues Mr. Cleary, "it is not wise to drift into untried theories at a time when the mind and thought of the people are overburdened with war."

The prospects are most serious to the insurance man, who fears our country will jump over the restraining boundaries of the American Constitution and fall into dangers, which, he says, have menaced and wrecked government by the people in the ages gone by.

Unfortunately Mr. Cleary does not give a list of former nations that accepted the theory of "government by the people."

PROTECTION FOR ENLISTED MEN.

(Continued from Page 7.)

and for its conversion under the provisions of the Act, without medical examination, not later than five years after the close of the war. In addition to its other advantages, therefore, this insurance, backed by all the resources of the United States Government, enables the fighting man to insure his insurability, regardless of his physical condition after the war.

Spirit and Purpose of Government Protection.

These three forms of Government aid—allotments and allowances, compensation, for death or disability, and United States Government insurance—are grouped together under the War-Risk Insurance Act, and administered, under the direction of the Secretary of the Treasury, by the Bureau of War-Risk Insurance.

This is the greatest measure of protection ever offered to its fighting forces by any nation in the history of the world. It is not charity; it is in the essence of justice to the gallant men who have gone to the colors, and to their loved ones at home. It strengthens America's fighting forces as they go forth to battle; it safeguards the families left behind; and by its broad and generous provisions it takes from war its chief terror—fear for the future.

Soldiers' and Sailors' Civil Relief Act.

In addition to administering the War-Risk Insurance Act, the Bureau of War-Risk Insurance is authorized to act for men in the active military service, under the provision of the Soldiers' and Sailors' Civil Relief Act, approved March 8, 1918, in the matter of the lapsing or forfeiture of certain specified life insurance contracts, either in life insurance companies or fraternal orders or organizations.

If the Government guarantees to the insurance company or organization the payment of premiums, the policy will remain in force, and the man in service will have one year after the end of military service in which to pay any defaulted premiums, before the policy or membership lapses.

The benefits of the Soldiers' and Sailors' Civil Relief Act are available only upon application. The act applies only to persons in the service from March 8, 1918 (the date of the approval of the act), and to persons entering active service after that date, from such date of entry.

The insurance under the Soldiers' and Sailors' Civil Relief Act does not apply to Government insurance issued by the Bureau of War Risk Insurance.

STEADY WORK ESSENTIAL.

F. T. Hawley, Director of the Industrial Plants Division, is sending the following letter to all central labor bodies and unions whose members are engaged on Government contracts:

"Would you call to the attention of your members, and particularly those engaged on Government work, the absolute necessity of being constantly on the job?

"I ask you to impress them with the urgency of working the established full working week and the full working day of their various trades.

"Every minute's time of every man is precious.

"The working people of our nation are confronted with the grave responsibility of reinforcing the boys at the front.

"We must keep our soldiers supplied with guns, ammunition, food and clothing.

"And we must build the ships and keep them moving to transport the troops and the needs of our allies.

"The world looks to the people of the United States for victory over an unscrupulous enemy, over a dying order.

"We have conquered every other obstacle that has thus far barred our way, and we shall continue to thrust the barriers aside.

"All America is determined.

"Every man and woman should be on the job on time, and stick to it with a tenacious will.

"We must win the war by keeping that aim constantly in mind.

"We are working for the triumph of democracy over autocracy.

"We are working for the United States Government and all the noble ideals for which it stands.

"We are working to save the lives of our gallant boys in the service by keeping them supplied with a tremendous surplus of the necessaries of war.

"This is the important obligation that rests upon the working people and history shall not say it has not been fulfilled."

MEASURING RIVERS.

The quantity of water that ordinarily flows in a stream and the quantities that flow at times of flood and at times of low water are of vital importance to the engineer who may want to utilize the water for power or for irrigation or who desires to study the value of the stream for navigation, as well as to the man who owns land along the steam and who wants to sell his water-power rights. For this reason the Government, in 1888, began to measure the flow of streams in the United States, and since 1895 the bills passed by Congress appropriating money for the work of the Geological Survey have carried an item for "gaging streams."

The results of this stream-gaging work in the drainage basins of the country are issued yearly in water-supply papers published by the United States Geological Survey, Department of the Interior. From these papers the engineer may ascertain not only the volume of the stream and its fluctuations during the year and from year to year, but also its mean and surface velocities, its mean depth, and the water power which may be developed on it.

The results of stream gaging for the year 1916 in the lower Mississippi River basin, including tributaries of Arkansas and Red Rivers, are given in Water-Supply Paper 437, just issued by the United States Geological Survey, Department of the Interior. A similar report on the St. Lawrence River basin has been issue as Water-Supply Paper 434, and a report for 1915 on the Missouri River basin, including the Marias, Milk, Yellowstone, Platte, and Kansas Rivers and their tributaries, as Water-Supply Paper 406.

These reports include descriptions of the stations at which the measurements were made and tables giving the daily and monthly discharge of the streams. An appendix contains lists showing the gaging stations maintained in the area covered and the publications relating to their water resources.

Water-Supply Papers 406, 434, and 437 may be obtained on application to the Director, United States Geological Survey, Washington, D. C.

WHAT IS A DERELICT?

The question, "When is a derelict not a derelict?" as settled by the House of Lords, has not given universal satisfaction, says Syren & Shipping. Certainly the judgment is not one which can be expected to fit every case, and the varying problems involved in each set of circumstances will ever present new points of interest to the legal mind. In the case under discussion the ship in question was the "Jupiter." Timber-laden and on a voyage from Archangel to Hull, she was attacked off the Firth of Forth by a German submarine. The crew were ordered—i. e., compelled—to leave the ship. The Germans boarded her and placed a bomb or bombs on board, and the master of the "Jupiter" averred that he heard an explosion which led him to believe that his ship had been blown up. The crew were subsequently picked up by a trawler and taken to Aberdeen, and the master wired to the owners that the ship had been sunk, and they in their turn informed the charterers, H. Newsum, Sons & Co.

What really happened was that the vessel floated on her cargo and was picked up by a patrol flotilla. She was brought into Newhaven, near Leith, and placed in the hands of the Receiver of Wrecks. The lower courts decided that the contract of affreightment was at an end, and that as the cargo owners had exercised the right to take possession, they were entitled to delivery at Leith without payment of freight. By four to one, however, the House of Lords decided in favor of the owners, and gave judgment in their favor for £14,050.

The Lord Chancellor said that the physical act of leaving the vessel was only one feature in such a case. Another and essential feature, in order to make the vessel derelict, was the state of mind of the captain and crew when they left. That question was decisive, and the facts seemed to him to show clearly that the abandonment of the ship was not, in the circumstances, such as to make the vessel a derelict.

The need of the moment is not so much for the formation of new unions as for new members in those unions already formed.

As a preventive of strikes nothing has yet been discovered which exceeds in potency the union label.

Labor News

Nearly 100 colored railroad helpers and laborers employed on the Southern Pacific at Algiers, La., have organized and affiliated with the American Federation of Labor.

Nearly 200 New Orleans drug clerks have signed the charter roll of the first Drug Clerks' Union. These workers are determined to reduce their long work day and secure a living wage. They have affiliated with the Clerks' International Protective Associaton.

Reports received from the United States Employment Service show that women have engaged in railroad tank painting, hardware-industry processes, garage management, and ranch work, as well as many other industries untried by them before the war. Processes in hardware industries include the work of screw-machine hands, spot welders, gas welders, dip braziers, and drill press and bench work. Among other new occupations to which they have been called are: Baggage porters, ushers, aircraft assemblers, telegraph operators, photographers, and bond salesmen.

Organized street car men have won their strike against the Middlesex & Boston Street Railway. An arbitrator says that "the company is running at a loss, but that the wages of the men must be fixed, notwithstanding that fact, because there is no question in my mind, and none were raised before me, of the increased cost of living." New rates for motormen and conductors are 35 cents an hour for the first year, 37 cents for the second year, 39 cents for the third year, 41 cents for the fourth year and 42 cents for the fifth year. Other employes are advanced and the award is retroactive dating back to July 1.

The second annual convention of the National Federation of Federal Employes, recently held at Chicago, was an enthusiastic event. Old officers were re-elected and a big program for the ensuing year was adopted. Old age, health and unemployed insurance were favored, as was minimum wage legislation. The employment of child labor was condemned, and taxes on incomes, inheritance and excess profits were favored. The convention gave hearty indorsement to Secretary of the Interior Lane's plan to reclaim land for soldiers' homesteads, and urged that this proposal be aided by a heavy tax on unused land, which would force it on the market.

The "Painter and Decorator" congratulates scenic artists in New York theaters who organized and in one month raised wages to a $42 weekly minimum and secured agreements with theatrical managers. "These visible, material and substantial benefits," says Editor Skemp, "more than compensate the scenic artists for the loss of dignity they feared might follow their becoming a part of the trade-union movement and being associated with men who are not ashamed to fresco a barn roof or to camouflage a tight board fence, provided they receive the union scale and are not asked to work more than union hours. We congratulate the scenic artists. They are now in a position to present to the management of the house or studio convincing arguments in support of their demands for a proper recognition of their skill and labor."

Home News

Prince Axel of Denmark, commander of the Danish navy and head of a mission invited to this country to study the American naval organization, was received by President Wilson. The Prince went to the White House with Secretary Lansing.

Clear profits of $3,762,491 for the year ended June 30 is reported by the General Petroleum Corporation and the General Pipe Line Company of California. These profits are an increase of $2,343,667 over the previous year. Before announcing this year's profits most substantial sums were set aside for depreciation and exhaustion of oil lands.

An Army of 4,800,000 by next July, after all deductions have been made for casualties and rejections, is what the enlarged American military program calls for. General March explained this to the House Appropriations Committee in discussing the new $7,000,000,000 Army estimates. There are now about 3,200,000 men under arms, General March said, and the plan is to call 2,700,000 of the new draft registrants to the colors between now and July.

Steps to mobilize negro workers for agricultural and war munitions work are being taken by Dr. George E. Haynes, director of negro economies for the Department of Labor. Conferences with representative negroes in a number of States is resulting in the creation of State advisory committees. In addition to these committees, Federal supervisors of negro economies have been named for Ohio, Virginia, Illinois, Mississippi, Georgia and Florida.

The War Industries Board has notified the Board of Education of New York City that only where there is the utmost need shall a new school be built while the war emergency continues. The War Industries Board will not give the educators priority for steel and other material because every ounce of energy and material is needed in the war. The board also points out that Secretary of the Treasury McAdoo has ruled that new public buildings are not necessary while the war lasts.

Anthracite coal production during the week ended August 31 totaled 1,806,121 gross tons, the record for any week in 1918. The increase over the preceding week amounted to 100,000 tons, and over the corresponding week of 1917 214,369 tons. These figures do not include coal used at the mines or sold for local delivery. Of the total output, 1,202,812 tons was of prepared and pea sizes, and 603,309 of steam sizes. The average daily output totaled 301,019 tons, this being the first week this year which the daily average went above the 300,000-ton mark.

Wages of railroad employees cannot be garnished as this process would attach money under Federal control, rules Director General of Railroads McAdoo, who orders that hereafter "no moneys or other property under Federal control or derived from the operation of carriers while under Federal control shall be subject to garnishment, attachment or like process in the hands of such carriers, or any of them, or in the hands of any employee or officer of the United States Railroad Administration." The Director General also says that "if any rules or regulations become necessary to require employees to provide for their just debts, the same will be issued hereafter."

Domestic and Naval

The Bureau of Yards and Docks, Navy Department, is asking bids on additions to the machine shops and foundry at the Boston Navy Yard, to cost $900,000.

Danish and American shipping agreement, which has been the subject of negotiations between the War Trade Board and the special Danish mission in Washington, has been completed and signed. Similar agreements have been made with all European neutrals, except Holland.

Contracts let for white pine August 28, by the Navy Department totaled approximately $800,000. Nine firms shared the awards, the Wyatt Prock Co. of Philadelphia, leading with eleven contracts, amounting to about $650,000. The majority of the lumber is to be delivered at Boston, but New York, South Brooklyn, Washington, Philadelphia and Norfolk are also included in the list.

Purchase by the Railroad Administration of nine barges, two towboats and warehouse facilities at East St. Louis belonging to the Kansas City, Mo., River Navigation Co., and operation of the barges and boats on the lower Mississippi, has been approved by Director-General McAdoo. This transaction was authorized in order to provide further equipment for the transportation line operated by the Railroad Administration from St. Louis to New Orleans on the Mississippi River.

So many tugboats were taken from the Great Lakes last year for service on the Atlantic coast of the United States that it appears there is a shortage of this craft on the Lakes, and shipping operators there are now purchasing tugs along the New England coast to help out the situation. The latest sale reported is that of tug "John Chester Morrison," of Rockland, Me., and she is to be taken around by Capt. George Webster, who will call at Halifax for a pilot to the River St. Lawrence.

By a decree just issued, neutral vessels operating under safe conduct issued by an enemy country will not be recognized by the Allies, and both vessel and its cargo are liable to seizure. The decree stipulates that any neutral vessel which places itself under enemy control by receiving an enemy safe conduct, which is not recognized by the Allies and is in opposition to the exercise of their belligerent rights, will be considered, unless proof to the contrary is furnished, that it is navigating in enemy interests and therefore be subject to capture and confiscation, together with the merchandise or enemy property constituting the cargo.

Alleging that the British steamship "Glenorchy" was severely damaged and her gun platform smashed by being run down by the steamship "Paul H. Harwood," Captain D. G. Durrant, commander of the "Glenorchy," has filed libel proceedings with Clerk Kelsey of the Norfolk Bureau of the United States Court, asking for alleged damages amounting to $20,000. In the petition Captain Durrant recites that his ship was securely anchored in Hampton Roads, a mile from Old Point, August 27, when the "Harwood," in endeavoring to pass her, swung in too close to the "Glenorchy," smashing her starboard bulwarks and wrecking the gun platform on deck. Captain Durrant alleges that the "Glenorchy" was damaged $10,000 and that delays in being repaired will bring the total damages to $20,000.

News from Abroad

Maximilian Harden, in the Zukunft, contrasts the aristocratic German spirit with the democratic American spirit, and says that America is a storehouse of idealism such as was never known before.

Although the British shipping losses were lower there was a slight increase in the total allied and neutral shipping losses, due to enemy action and marine risk in August over July, according to a statement by the admiralty just issued. The total losses for August are 327,676 gross tons, an increase of 3904; divided as follows: Allied and neutral losses, 151,275, an increase of 10,027; British losses, 176,401, a decrease of 6123.

A firm in Barcelona, Spain, Construcciones & Pavimentos, has for some time been building small concrete vessels and expanding its yards in order to enable the construction of large, ocean-going reinforced concrete ships. On August 24 the following cablegram was received by the Portland Cement Association, Chicago, from the firm mentioned: "First Spanish reinforced concrete sea-going ship built by us arrived successfully Barcelona harbor. Best greetings, American friends." As this Spanish firm was preparing last spring to build 6,000 ton concrete ships, it is likely that this message refers to the successful trial trip of the first of these large, reinforced concrete vessels completed.

A Buenos Aires dispatch says that President Irigoyen had sent to Congress a bill designed to encourage shipbuilding. Under its provisions the government would lend assistance for the establishment of shipyards and especially authorize long concessions in order to encourage the investment of private capital. The President's message, which was approved by the Cabinet, says that the difficult maritime situation as a result of the war found Argentina unprepared to alleviate with her own shipping the damage to international commerce caused by lack of ships, and that this unpreparedness was due largely to lack of encouraging legislation for shipbuilding. The bill provides rewards for the rapid completion of shipyards.

The past week brought victories everywhere and of every variety, naval, military, aerial, diplomatic and political. At sea we were sinking submarines and Bolshevik battleships; on land the enemy was retreating or suffering disastrous defeat on every front; in the air American and allied aviators were working havoc among enemy flyers and dropping destruction upon German towns; the diplomats of the Central Powers lost their heads in furious ravings over the effects of American participation, and political turmoil ruled from Berlin to Sofia and Constantinople, and from Vienna to the seat of the Bolshevik Government—wherever that might be. The mastery of Foch was seen in an unexpected attack by American troops in the long inactive Champagne region. Instead of moving on Metz, a point of German concentration the Americans struck to the west of Verdun and carried all objectives as well as capturing many thousands of prisoners and much valuable war material. Further again to the west and nearer to Rheims the French went surging over the top, gaining ground and bagging many prisoners.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL.

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 5. SAN FRANCISCO, WEDNESDAY, OCTOBER 9, 1918. Whole No. 2507.

PRESIDENT'S MESSAGE TO SEAMEN.

American Seamen, Active and Retired, Called To Help Win The War.

To All Those on Land or Sea Who Have Followed a Seafaring Life:

The men who go down to the sea in ships have become an important factor in our national life. Their services are extremely essential in handling the ships to carry our soldiers in safety to Europe, in transporting the munitions and food supplies for their maintenance and the material for the sustenance of the armies and peoples of the countries with which we are associated.

Safety in handling transports and merchant vessels requires not only a knowledge of navigation and the details of management, maintenance and control, but also that long experience with the various conditions at sea which gives confidence, quick judgment and steady action in an emergency. There are many men with this kind of experience employed on our merchant marine and many others who have left the sea and are now following other occupations. The vigorous prosecution of the war has impelled us to build vessels in larger numbers than ever before. We are launching a continuously increasing tonnage. These vessels will need skilled seamen to man them. No more honorable or serviceable task can come to any of our people than that of manning our merchant marine. With an increasing tonnage being put into service we must know where skilled men can be obtained to furnish at least the basis of the crews that are to man them. With such information available there will be no doubt about the efficient manning of our vessels for the entire period of the war.

The history of American seamanship is a glowing record of patriotism, courage and achievement unsurpassed by any people anywhere. I therefore confidently call upon all seamen and all men engaged in other occupations who have heretofore been seamen to give, in connection with the questionnaires they submit to the local draft boards, full information about their rating and experience at sea to enable the boards to place them in their proper classification and give to the Government a knowledge of where experienced seamen may be secured when their services are required. The kind of skill that makes an efficient seaman can only be obtained at sea. It is the product of experience and must include among other things that subconscious swaying of the body to the motion of the vessel known as "sea legs." There can be no safe, efficient management of vessels that does not include a large proportion of officers and crew having skill and experience. It is indispensable in emergencies such as we must be prepared to meet in times of war.

It is the patriotic duty of young men who join the merchant service to make every effort to learn their work in the shortest possible time and of the skilled men to assist these young men in their efforts. It is the duty of owners and managers of vessels to co-operate in this work and to give to the young men such shipmates and such treatment as will cause them to respect the service and build up within them a desire to make it their lifework. The work of a seaman is so vitally important to the conduct of the war that it has become necessary for the Government to provide deferred classification for them in its efforts to secure a sufficient supply of skilled men for the maintenance of speed and safety. Having in mind the brilliant record of the American merchant marine, the honorable position it occupies in economic affairs, and the important part it plays in winning the war, every seaman should give to the service the best that is in him and should not hesitate to accept deferred classification when the Government has decided that such deferred classification is necessary no matter how eager he may be to join the fighting forces of the Army or the Navy.

WOODROW WILSON.

RAMMING A SUBMARINE.

The King's Bench Division has recently held that ramming a submerged object on the part of a steamer in the belief that such object is a submarine, is an act performed in consequence of hostilities and that the damage sustained therefrom is one which the war risk, and not the marine, underwriters are liable. The question arose through an action brought by the owners of the S. S. "Express," claiming a total loss on the vessel. About 1 a. m. on April 4, 1917, the "Express" was on a voyage from Fécamp to Southampton Water. About 20 miles northwest of Cape Antifer the master, who was on the bridge, saw a semi-submerged object, which he took for a German submarine, about 100 yards away. The master immediately gave orders to ram the object; the ship struck it violently, and damaged itself seriously. Although the vessel was not far from shore and was in the track of other shipping, she was unable to attract assistance, and after keeping afloat for several hours she sank.

On these facts the plaintiffs (Henry MacGregor, Ltd.) submitted that there was clearly a loss by marine perils, and, alternatively, that there was a loss by war risks. They claimed under (a) a Lloyd's policy for £1,835 on hull and machinery, valued at £5,000, such policy covering the usual perils, but containing the f.c. and s. clause, and under (b) two policies subscribed by the North of England Protection and Indemnity Association, for £2,000 on hull, machinery, etc., valued at £5,000, and for £3,000 additional on the aforesaid valuation of £5,000, such policies covering only (1) risks of capture, seizure, or detainment by the King's enemies and the consequence thereof, or any attempt thereat, and all consequences of hostilities or warlike operations by or against the King's enemies, whether before or after the declaration of war, and (2) all risks not covered by section (1) above which were excluded from recovery under the ordinary policies on hull or machinery by reason of the presence in such policies of the free of capture and seizure clause of the Institute clauses then in use, or by other similar, but not more extensive, warranty.

The marine underwriters contended that the loss was excepted by the f.c. and s. clause, and was not due to a peril insured against by the marine underwriters. The war risk underwriters contended that the object rammed was not a submarine at all and therefore the loss was due to marine, and not war risks.

The "Express" was a small boat built in 1869 and carrying only eight hands.

The Court held that without doubt the steamer was ultimately lost by a peril of the sea, but the marine risk underwriters were entitled to show, if they could, that on the facts the risk was excluded by the f.c. and s. clause. It was very difficult to say what the object rammed really was; at that spot one was quite likely to meet with a German submarine, and one was also quite likely to meet with floating wreckage. The evidence left the question in doubt whether the object was a submarine or not. He thought that it did not make any difference to the result. It was clear that the captain, a competent navigator, honestly believed the object to be a submarine and thought it his best course to destroy it before it could destroy him; and to attack it was the most reasonable thing for him to do. His action, though offensive, was the best defensive method, and was clearly a warlike operation or a consequence of hostilities, and his judgment must therefore be against the war risks underwriters, with costs.

The costs of the successful defendants, the marine risks underwriters, must be borne by the plaintiffs and could not be recovered by them from the unsuccessful defendants.

THE PROFIT-SHARING FALLACY.

Profit-sharing is an attempt to throw the workers off the track that leads to victory.

Labor and Capital, it is claimed by those who advocate it, should end their conflict by entering into partnership and sharing profits on a definite basis of division.

If the workers were to accept this seemingly generous proposal, they would find their last case worse than their first.

Speeding up would inevitably result in the effort to augment their share by increasing profits. And there'd be a tendency to connive at high prices, with the same end in view.

The total effect would be most damaging to the interests of the working class. They would produce more, and get less. Their labor would become intensified, while their purchasing power would decline.

The workers would do the speeding up, for Capital as such is incapable of exertion. The workers would pay the high prices, for Capital as such is not a consumer.

Instead of improving their economic condition by profit-sharing, any general adoption of the scheme would lower the status of the workers and confirm their servitude.

There is another aspect of the matter, and a vitally important one. Profit-sharing would destroy Unionism.

The interests of the workers would be split up and divided among unrelated commercial enterprises, many of them in actual competition with one another. No longer would they be bound together for the redress of wrongs suffered in common and the assertion of rights demanded in common.

They would be rivals in business, and all their hopes would center on pushing the particular concern with which they were associated, thus rendering vastly more difficult any united purpose.

Unionism would disappear, and with Unionism the most powerful factor making for the progress of the race.

This is a feature of profit-sharing that will commend it to capitalists, because the progress of the race means the elimination of their class dominance and the establishment of an Industrial Commonwealth in which they would have no function to perform.

But it would be disastrous for the workers, riveting upon them the chains of slavery, and stripping them of their historic mission of carrying on the evolution of society, and, by liberating themselves, setting free mankind.

A big Australian firm recently announced its intention of putting its employes on a profit-sharing footing, its managing director declaring that in this method lay the solution of the industrial problem.

That many other firms will follow suit, especially after the war, when the labor situation will be pregnant with revolutionary possibilities, there can be little doubt.

The workers must be on their guard against this cunning and plausible confidence trick. Nothing is for their good that disperses their interests in a thousand different directions, instead of concentrating them on one desired goal.

The industrial problem will never be solved till Capital ceases to be regarded as an active participant in production, rightly demanding profits, and becomes what it really is, a mere instrument in the hands of Labor, no more entitled to dividends than a pick or a shovel. —The Australian Worker.

BRITAIN'S TIMBER RESOURCES.

Opinions prevalent before the war as to Great Britain's home timber resources have been proved by the experiences of the past year to have been wrong, says the Timber Trades Journal, of London.

In 1911 the Journal estimated that if the supplies of pitwood from overseas were cut off the coal mines of the United Kingdom would after a brief period shut down and the manufactories would cease working. The Journal now says:

"We are glad to find after this country has been at war for nearly four years that this statement was far from correct. Last year (1917) 995,000 loads of mining timber were imported, as compared with the corresponding importation of 2,477,000 loads for the year 1914; and this considerable saving in tonnage has been met by no less a quantity than just under two million tons being produced during 1917 from British forests. We hear on good authority that as the result of a recent careful survey of standing timber in the United Kingdom, provided the necessary labor and transport can be found, there is no need for anxiety for many years ahead in regard to the ability to supply the necessary pitwood to our mines. As regards sawn wood, it is estimated that we are now producing today in these islands, from all sources, at the rate of between 400,000 and 500,000 standards per annum, which speaks very well for the energy displayed by those merchants who have turned their efforts in this time of stress to the exploitation of home-grown woods. It is consoling, also, to know that concurrently with this rate of production, there are good reserves of soft woods, while as regards hard woods, in the shape of oak, elm, beech and chestnut, there is an enormous quantity available. One thing the adversities of war have brought out is that the qualities of our British home-grown timber are equal to those of a large portion of the imported wood."

WHAT IS EDUCATION?

A man is educated only in so far as he is able to relate his knowledge and acquirements to the business of human living here and now.

Learning is not education. A man may possess a vast amount of learning and yet be a fool. Here information is not education. To know how to make the right use of information is the only education. The encyclopedia is packed with all the scientific and literary facts of the world, but it cannot use one of them.

There is a great deal more learning than education in the world. Our schools and colleges are for the most part well called, "Institutions of Learning." That they are, but of education, I am sorry to say—not.

To yoke up learning with life must be the great educational work of the future.—Bruce Calvert, in The Open Road.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

War Munition Plant Seized by President.

The President has commandeered the war munitions plant of the Smith & Wesson Company, Springfield, Mass., because it has "refused to accept the mediation of the National War Labor Board and has flaunted its rules of decision approved by Presidential proclamation."

It is announced that Captain Walter A. Foster of the War Department has been placed in charge of the plant. Details of administration will be carried on by officers of the company. By seizing the plant the National War Labor Board's award will be placed in effect.

The most objectionable part of this award was the abrogation of private contracts with employes, thereby permitting the employes to act collectively. Rather than accept the award the company asked the Government to take over the plant. In its letter to the War Department the company indulged in no "open shop" camouflage to conceal its anti-unionism. It declared that it conducted a non-union shop and before it employed workers they had to agree that they would not join a union while so employed. The National War Labor Board set these contracts aside during the period of the war, although the United States Supreme Court, last December, had legalized this contract in injunction proceedings against the Mine Workers' and Flint Glass Workers' unions.

The following statement by the company indicates how important the court's decision was to anti-union employers until the National War Labor Board threw it in the scrap heap with other before-the-war antiquities:

"In the matter of grievances it (the company) has dealt only with individuals and has not recognized shop committees."

German Government Apart from People.

One of the most popular of the educational pamphlets issued by the Committee on Public Information is entitled "The Government of Germany," by Charles D. Hazen, professor of European history, Columbia University, New York City.

"The German Empire," he says, "is a confederation, founded in 1871, and founded by the princes, not by the people, and consists of twenty-five states and one imperial territory, Alsace-Lorraine. The king of Prussia is ipso facto German emperor. The legislative power rests with two bodies, the Bundesrat, or Federal Council, and the Reichstag. The emperor declares war with the consent of the Bundesrat, the assent of the Reichstag not being required. Not even the Bundesrat need be consulted if the war is defensive, and as the Hohenzollerns have always claimed to make defensive warfare, it is not surprising that even the unrepresentative Bundesrat was officially informed about the present war three days after the emperor declared it.

"The Bundesrat, of which we in America hear very little, is the most powerful body in the empire, far more powerful than the Reichstag, of which we hear a great deal. It possesses legislative, executive and judicial functions, and is a kind of diplomatic assembly. It represents the states, that is, the rulers of the twenty-five states of which the empire consists. It is composed of delegates appointed by the rulers. Unlike the Senate of the United States, the states of Germany are not represented equally in the Bundesrat, but most unequally. There are sixty-one members. Of these Prussia has seventeen, and the three votes allotted to Alsace-Lorraine since 1891 are 'instructed' by the emperor. Thus Prussia has 20. Bavaria has 6, Saxony and Wurttemberg 4 each, others 3 or 2, and seventeen of the states have only one apiece. The members are really diplomats, representing the numerous monarchs of Germany.

"The princes of Germany have an absolute veto upon the only popular element in the Government, the Reichstag. Representing the princes of Germany, the Bundesrat is a thoroughly monarchial institution, a bulwark of the monarchial order. The proceedings of this princely assembly are secret, which is one reason why we know and hear less about it than we do about the Reichstag."

Will Reclaim Cripples.

Thousands of workers permanently disabled in accidents are to be reclaimed and trained for some useful occupation, according to plans being perfected by the Pennsylvania Workmen's Compensation Board.

The plan was started at the hearing of more than a score of "commutation" cases before the board in Philadelphia. In these cases, workers who have lost arms, legs or eyes will ask for lump sums of compensation instead of weekly payments. The board placed before these workers the plan to pay the full amounts, provided artificial limbs and necessary medical treatment are immediately obtaned and the worker agrees to go through vocational training at some institution designated by the board.

Plans for the project have been drawn by Harry Mackey, chairman of the Workmen's Compensation Board, and the next Legislature is to be asked to provide rehabilitation institutions for training these workers.

At least 2500 workmen have been permanently disabled since January, 1916, when the Pennsylvania Compensation Act went into effect, and hundreds of thousands of dollars are being paid them monthly.

In calling attention to the rehabilitating of disabled soldiers who have returned to this country, Mr. Mackey said that the army of injured workmen at home is just as important to help.

Gains by Broom Makers.

In a letter to American Federation of Labor Secretary Frank Morrison, William R. Boyer, Secretary-Treasurer of the International Broom and Whisk Makers' Union, reports a very large increase in membership the past three months and that "our members everywhere are securing new wage agreements with splendid advances in wages." Last December, when

World's Workers

The farm-labor situation is said to have become serious in England, and introduction of labor-saving machinery has resulted on a much wider basis than has ever before been attempted. By making full use of the farm machinery, and utilizing every agricultural worker available, the farmers have, on the whole, been fairly successful in harvesting their 1918 crops.

At the end of 1916 there were at work in the United Kingdom 1,488 industrial, co-operative, distributive and productive societies with an aggregate membership of 3,563,769, a total share, loan and reserve capital of £77,937,736; a total trade (distributive and productive) of £237,525,135, and a total profit—before deduction of interest on share capital—of £18,958,388. Excepting for a decrease of ten in the number of societies—due mainly to amalgamations—these figures show a remarkable growth as compared with 1915, there being an increase in membership of 257,450, or 7.8 per cent.; in capital of £7,611,259, or 10.8 per cent.; in trade of £39,290,948, or 19.8 per cent.; and in profit of £1,990,439, or 11.7 per cent. The total number of persons directly employed by the societies was 154,622, and the total wages paid during the year amounted to £10,391,245, compared with 149,852 employees and £9,607,434 in wages in 1915.

The first number of The Month's Work, a magazine issued by the British Ministry of Labor, has just made its appearance. In a "Foreword" the Minister of Labor expresses the hope that the magazine will "serve as a link between all those, without distinctive rank or grade, who are called upon to deal with industrial problems." Reference is made to some of the principal activities of the Ministry and, as regards the Local Advisory Committees in connection with the Employment Exchanges, the Minister observes that "a ready means of inter-communication between the committees, engaged as they are in supervising the application, under conditions which vary greatly in detail, of principles which are fundamentally the same, is urgently demanded. In this way it is hoped that The Month's Work will play an effective part, stimulating that interest and imagination in dealing with industrial questions, which may be anticipated as the special outcome of the work of the committees."

The report of a parliamentary committee appointed to investigate conditions surrounding child labor in Austria discovered a most deplorable condition, according to the Arbeiter Zeitung of Vienna. More than one-third of all school children are engaged in some kind of work. In some districts all the children of school age are working. Out of every 100 school children between 6 and 8 years, 18 are at work; between 9 and 10, 35; between 11 and 12, 50; and between 13 and 14, 52. Two-fifths of these children have been working from the time they were 5 or 6 years old. Out of every 100 children, 95 worked during the school year as well as during holiday periods. Much of the child labor is performed at home with parents and nearly three-fourths of all the children are employed 52 weeks in the year. About one-fourth are engaged in night work. So serious is the situation that new legislation which will prevent the employment of children under 12 years of age, except on farms and in household tasks, is now being considered.

Pacific Coast Marine.

The Concrete Craft Corporation, organized to build concrete ships at Seattle, has filed articles of incorporation with capital stock at $1,000,000. The trustees are: G. E. Kastengrew, Israel Nelson, Louis Rolfe, Jeremiah Miller, of Seattle, and C. E. Hogberg, Tacoma.

Lumber shipments from British Columbia for August were as follows: To Japan, via Seattle and Tacoma by scow, 3,898,635 feet; to United Kingdom, 2,534,089; to Galveston, presumably for U. K., 178,376; to China and Japan, 836,325; to Australia, 306,604; total, 7,754,029 feet.

Many of the fishermen who have returned to San Francisco from Alaskan waters are preparing to go after salmon in the Sacramento and San Joaquin rivers. It is reported that the salmon are running better in the Sacramento than for many years past and the catch will add materially to the supply.

The St. Johns plant of the American Marine Iron Works, Portland, Ore., has been incorporated with the following directors: S. F. Wilson, M. L. Jones, T. H. Beverly, A. M. Cannon and Carl Jones. It has acquired two blocks on the Willamette river at the foot of Richmond street and a foundry and machine shop are being equipped.

Captain Ryan and Lieutenant Barton are scheduled to arrive in Portland shortly to open an office to recruit for a stevedore and labor battalion for overseas service. Men who can qualify for officers in the battalion are said to be in special demand. The battalion is to be assigned to the European end of the American transport and merchant marine system.

Captain Joseph J. Meany of San Francisco, traveling inspector of the United States Steam Vessel Inspection Bureau, is at Portland to look over work being done on ships here by local inspectors and to see that the laws of the Department of Commerce are being enforced. Captain Meany formerly was inspector of hulls here. Work planned by Captain Meany will take about three weeks.

Captain Robert Lee Russell, Commandant of the Twelfth Naval District, which embraces the Pacific Coast, has been assigned to the position of Commandant at Samoa, it was learned from semi-official sources during the week. Previous reports were to the effect that Captain Russell, who is to be succeeded at San Francisco by Rear-Admiral Joseph L. Jayne, had been ordered to the island of Guam. Samoa is an important base in the South Pacific.

The license of Captain Albert Egeholm, former master of the motor-ship "Erris," was suspended eighteen months by local Inspectors James Guthrie and Joseph Dolan at San Francisco on the charge of negligence. The inspectors said the vessel probably would not have gone on the rocks, April 22, off the coast of Japan, if the skipper had taken bearings by the compass. The motor-ship was floated from her precarious position and later met with several mishaps.

The Hawaiian Islands have an estimated population today of 256,180, according to the annual report of the Board of Health just submitted to the Governor. Honolulu's population is about 75,000, while the rest of the island of Oahu is placed at 41,500. The population of Hilo, the territory's next largest city, is 10,500, and the rest of the island of Hawaii is 41,500. The Japanese population is estimated at 106,800. A large increase is noted this year among the Japanese.

According to Crowley and Peterson, the San Francisco barge business is growing by leaps and bounds and more than 2 per cent. of the local freight on and off ships is now being handled by the lighter method. The lighters of both concerns and also a few operated by smaller concerns are being crowded to the limit. Shipping concerns are saving time by utilizing the barge system. In some instances two days have been saved for a vessel's stay in port, with the charter price reckoned at $3000 a day.

Suit for damages of $26,600 has been filed in the Federal Court at San Francisco against the American motor-ship "Erris" and the American Asiatic Company. The action is brought by Sir Robert Balfour, Sir Archibald Williamson, A. B. Williamson, A. W. Blackie, T. J. Whitson, John Lawson, W. J. Burns, Alexander Baillie, doing business under the name of Balfour, Guthrie & Co., and Charles D. Willitts. Shipments of castor and bean oil arriving, it is contended, in a damaged condition are responsible for the action.

The dredge "Chinook" has ceased work for the year at the mouth of the Columbia river. Captain Cann, master of the craft, received orders during the week to lay the vessel up for the winter. The "Chinook" has done excellent work during the present summer and as a result the entrance to the Columbia river is now in better condition than is any other bar harbor in the world and the deepest draft craft can enter and depart at any stage of the tide. At the mouth of the river proper there is a channel 2500 feet wide with a depth of from 40 to 42 feet.

H. G. Seaborn, vice-president of the Skinner & Eddy Corporation, of Seattle, which it is said has led all others in the delivery of contract ships to date, announces that the concern has produced a little in excess of one-eighth of one ton per man per day for the year. At that rate it would require only 225 steel ways in the United States to produce approximately 10,000,000 tons deadweight per year and, Mr. Seaborn says, only 250,000 men distributed over these 225 ways to obtain the same approximate results. The Skinner & Eddy yard has employed an average of 4527 men for the last twelve months. With the facilities now in operation, Mr. Seaborn declares it is not too optimistic for the Shipping Board to expect at least 10,000,000 deadweight tons in the second year of its operation.

Working with the Port of Portland and the Commission of Public Docks, the Portland Chamber of Commerce is considering a plan of harbor development suggested by J. H. Rosseter during his visit there, prior to taking up his duties as director of operations for the Emergency Fleet Corporation. The plan includes and will give a large new dry dock, a capacious, modern machine shop on the shore by the dry dock for vessel repair; a barge equipped with a light machine shop repair plant, to go alongside vessels and make the repairs while the craft is working her cargo; adequate storage to cover a possible requirement of 40,000 or 50,000 tons of coal for ship bunkering per month; facilities for putting coal aboard vessels in the stream while working cargo, and barge facilities for putting fuel oil into a ship while working cargo.

Statistics relating to timber products of British Columbia for 1917 are contained in the annual report of the forest branch just issued. The total of lumber scaled in the province of British Columbia for the year ending December 31, 1917, was 1,647,275,000 board feet. This compares with an actual cut for 1916 of 1,161,750,000 board feet and 991,780,200 in 1915. This is an increase of virtually 42 per cent. over the 1916 cut. The value of the production in 1917 was $48,300,469, as compared with $35,528,000 in 1916, $29,150,000 in 1915 and $28,680,000 in 1914. The value of the timber cut was $28,225,000 as against $21,075,000 in 1916. The value of the pulp product was almost double, being $6,835,034 in 1917 as against $3,520,000 in 1916. Shingles in value also constituted a large increase, being $6,900,000 in 1917, as compared with $4,500,000 in 1916.

According to advices received from Papeete, Tahiti, the British bark "County of Roxburg" cannot be salvaged because her old iron sides have become so badly rusted and decayed that the craft would not pay for salving. Not only is the vessel about eaten up with rust, but the hull is split in two. The result is that Theodore Wicks, the San Francisco diver, and his men have returned to Papeete and will soon return to San Francisco minus the "Roxburg." The advices say that the vessel could have been moved from the beach into the water without great difficulty, but the question of keeping the vessel afloat afterwards was a problem. The ship will therefore remain high and dry on the beach until it breaks to pieces, and in the meantime the natives will have a handy place to store their copra and other products. The vessel is now a warehouse. When the expedition left San Francisco for Takarora it was generally supposed that the "Roxburg" was in good condition. The local backers of the expedition expended a considerable amount and believed that all was going well until they received a cablegram announcing the abandonment of the work. An effort is being made to dispose of the salving equipment, but as theer are no other wrecks in the South Seas worth salving, it is expected that the timbers and other supplies will have to be shipped to some other port for disposal. There was a rumor along the San Francisco water front of other salving operations now being considered by decided upon. One is to salve the German decided upon. One is to salvage the German raider sunk in the harbor of Guam. It is not believed that enough money can be raised to go after this work because of the depth in which this craft is submerged. In addition, the local capitalists say that, in the event of success, there will be little real profit left after the Government collects the war tax.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal
Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC
Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

Headquarters of the Sailors' Union of the Pacific, 59 Clay Street, San Francisco.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, OCTOBER 9, 1918.

WARTIME IMMIGRATION.

Immigration, it has been popularly supposed, has practically stopped, so far as the United States is concerned, since the entrance of this country into the world war. Yet Commissioner of Immigration Anthony Caminetti, of the Department of Labor, finds that statistics reported to his office by agents of the department stationed at the various American ports show immigration to have increased everywhere except at the Atlantic ports.

The number of immigrants formerly entering at Atlantic ports was, of course, by far the greatest number, and lack of immigration has diminished the labor supply and checked the abnormal school enrollments of many eastern cities. The increases in immigration through Gulf and Pacific ports and from Canada have been so large, however, that alien arrivals are still an important factor.

Spain and Scandinavia are sending some immigrants to America, and Mexican immigration has doubled within two years. The belligerent nations, naturally, are sending few men to America, for practically all the able-bodied manhood has been summoned to the colors.

There is a curious development in connection with the immigration of workers from Mexico. The Mexican Government is openly discouraging the emigration of its people. It is fearful of losing, even temporarily, its best workers and mechanics. Proof of this is found in the iron-clad regulations now enforced on the southern side of the border line, practically stopping great masses of Mexican workers who desire to come into the United States and obtain the high war wages of this country.

Nothing, however, can entirely prevent Mexican workers from finding the best market for their labor, and every night the shallow waters of the Rio Grande are crossed by wading workers who risk all to get into the United States. Laredo and Eagle Pass are the official doorways from Mexico, but only a fraction of the thousands from the southern republic officially, and legally, enter this country.

The labor crisis for the United States is rapidly centering on the border. Mexico contains 14,000,000 workers, the nearest, the most easily assimilated mass of peoples outside of the United States. The Department of Labor has wisely decided that the standard of living in this country can be more easily retained and attained by Mexican workers than that of any other available nationality. With this conviction in mind Secretary of Labor Wilson answered the millionaire employers of California, who demanded that the bars be let down for an influx of Asiatic labor, by making provision for the entrance of Mexican labor to supply the war needs of the United States.

San Antonio has just heard the address of T. A. McLean, representing the Department of Labor, in which he stated:

> It takes from six to ten men behind the lines to keep every soldier at the front, and with the proposed draft extensions there will be an army of 6,000,000 men within a year. That will mean at least 36,000,000 workers behind that army to keep it effective.
>
> Altogether, the army will number about 42,000,000 soldiers, industrial and military—and all of that out of a population of 100,000,000, the greater number of whom are women and children! What does that mean? It means that you business men will have to dispense with every unnecessary workman.

McLean's statement and figures shot home to every Texan in the audience the problem of the border, across which lies the only available source of labor supply absolutely essential to the United States during the war period.

This is one of the reasons why organized labor has commenced a systematic campaign of education among the Mexicans now in this country, numbering over a million and a half. The American Federation of Labor has declared in a series of conventions in favor of organization of Mexicans in this country and fraternal relations with the unions of Mexico.

This great border labor crisis, affecting our entire country as no other labor problem ever affected it before, will be the matter of discussion, study and resolution at the International Conference to be held in Laredo, Texas, beginning November 13, between the representatives of the American Federation of Labor and the organized labor movement of Mexico.

SHIPBUILDERS AND SEAFARERS.

The current issue of the "Emergency Fleet News," published by the United States Shipping Board Emergency Fleet Corporation, says:

> It is the duty of every man who is an active participant in the shipbuilding industry to claim exemption from the military draft. Heads of shipbuilding plants should not hesitate to advise their workers to claim exemption and to reassure them that in doing so they are not putting themselves in the "slacker" class.
>
> The man who shirks his job as a shipbuilder to-day is doing just as much harm to the nation as the man on the battlefield who plays the part of a coward.
>
> The tendency of the average individual is to view this matter of claiming exemption with a certain amount of embarrassment. The inclination is to feel that in asking to be excused from military service one is putting himself in the position of hesitating to do that which so many thousands of young Americans are doing voluntarily. That is a very natural feeling but it does not justify any essential war worker in waiving his exemption rights.
>
> The War Department itself urges that all who have a just claim to exemption put forth that claim. It would be a very foolish thing if we were to weaken one arm to strengthen another when both are needed in their full strength against the enemy. The military authorities do not expect to cripple very necessary war industries at home. Obviously one of the purposes of the draft is to insure that the war industries be maintained.

In connection with the foregoing, Merchant Seamen of all ratings should bear in mind that their calling is perhaps even more essential to the successful prosecution of the war than that of the shipbuilders. Without experienced and competent seamen to man our ships we would be helpless, indeed.

President Wilson, whose timely appeal to men with sea experience is published on page 1 of this issue, fully realizes the great importance of the Merchant Seaman to America. And his appeal emphasizes the fact that no seaman, now actually employed at the calling, can render any more patriotic service to the country than by sticking to his job and performing his duties effectively and efficiently.

GUARDING UNCLE SAM'S INTERESTS

With the vast increase in the number of vessels operated by the Shipping Board and by the transport services of the Army and Navy, the subject of Admiralty litigation in which the United States is interested has become one of great and growing importance. Attorney General Gregory therefore recently announced that his department is giving attention to the development of a special organization in order promptly and effectively to protect the interests of the Government in these cases.

In accordance with this policy Mr. Ira A. Campbell, of San Francisco, has been appointed a special assistant to the Attorney General in Admiralty matters. Under the general supervision of an Assistant Attorney General Mr. Campbell will be charged with the duty of co-ordinating and overseeing the work of the Admiralty staff which the department is building up in the principal ports of this country and of arranging for the proper conduct of Admiralty cases which arise in foreign ports.

Mr. Campbell, who is one of the leaders of the Admiralty bar upon the Pacific Coast, has been acting as Admiralty counsel to the Shipping Board, and in that position, which he resigns to come to the Department of Justice, has been intimately in touch with the great expansion of the American merchant marine which is now in progress. He comes with the highest credentials as to his character and professional ability.

Thus, another favorite son of San Francisco has been honored with an appointment to a high and responsible post.

Surely, San Francisco is doing her full share to help "win the war" by furnishing men, money and talent!

THE HOME FRONT.

The battle front in Europe is not the only American front. There is a home front, and our people at home should be as patriotic as our men in uniform in foreign lands.

Every American soldier who has fallen in France, every American sailor who has died for his country's cause has given his life for his people. Surely we, their people, can lend our money to our Nation, their country.

The Fourth Liberty Loan is the fighting loan. Its great success will bring comfort and encouragement and a deep sense of pride to our Army and our Navy, and to our allies; it will bring discouragement to our enemies. Its success means American victory, Prussian defeat.

The fourth loan is the fighting loan, the sailors and soldiers' loan.

MONEY IN SAVINGS BANKS.

There seems to have been a very insidious propaganda carried on, obviously by secret agents of Germany, to the effect that savings banks deposits are to be confiscated. It is difficult to believe that any person in America would credit such a report for an instant. Secretary McAdoo says that the absurdity of these statements is manifest, but in order to allay the fears of a few who might be alarmed by such reports, he repeats officially that these rumors are wholly baseless.

There is but one thing that will in the least put in danger of confiscation the savings of the American people, whether deposited in savings banks or other banks or invested in Liberty Bonds or any other investments, and that one thing is a German victory. It is not the American Government that our people should fear, but the German Government, and with the American soldiers fighting as they are in France and the American people supporting their Government as they are in America, the American people, their liberty, their rights, and their savings are safe.

The United States instead of confiscating or endangering the savings and other property of its people is defending them and theirs with all the irresistible might of this invincible Republic.

FACTS ON SHIPBUILDING.

Lord Pirrie, Controller-General of British Merchant Shipbuilding, has just issued a statement containing the following reference to American shipbuilding:

"Enormous though the output of American shipyards promises to be in the near future, the demands of the American forces abroad for continued reinforcements, and for enormous quantities of supplies, will increase in a steadily advancing ratio, and the time is not yet in sight when there will be sufficient tonnage on the American register to carry all these."

In addition Lord Pirrie said that 68 of 102 berths approved for concrete shipbuilding in the United Kingdom have been completed, and of the new and enlarged berths at ordinary yards which have been authorized to the number of 111, the work has now been carried out on over 25 per cent. The standard ship program has been extended until it represents 74 per cent. of the total number of vessels laid down. Lord Pirrie also stated that 11 of the fabricated ships which the National Yards were intended to assemble are on the stocks in private yards.

It is difficult for old-timers to believe that the concrete ship has come to stay. But there surely is no doubt about the willingness of every maritime nation to give concrete every possible chance to make good.

Saturday, October 12, is the four hundred and twenty-sixth anniversary of the discovery of America. President Wilson has proclaimed it Liberty Day and requests the citizens of every community in the United States—city, town, and countryside—to celebrate the day. The President, in his proclamation, says:

Every day the great principles for which we are fighting take fresh hold upon our thought and purposes and make it clearer what the end must be and what we must do to achieve it. We now know more certainly than we ever knew before why free men brought the great Nation and Government we love into existence, because it grows clearer and clearer what supreme service it is to be America's privilege to render to the world.

The trouble with the man who can see no hope ahead of him is simply that he is headed the wrong way.

AFTER-WAR CONDITIONS.

The New York "Public" Has An After-the-War Remedy to Give Employment to All Labor at High Wages.

Now that the country's military strength has been demonstrated, and its exercise has brought victory within sight, thoughtful minds are turning to the problems of peace. At the close of the war the country will have six or seven million men under arms, with perhaps twice as many more devoted to their maintenance. Thus the advent of peace will find fifteen to twenty million people who have been devoting their time to the destruction of life and property suddenly called upon to seek new occupations. The problem for statesmen and publicists is to find the means and opportunities for making the change.

It is not sufficient to say that soldiers and workers in war industries can be restored to peaceful production simply by repealing the laws that called them to war. A vast number of these men and women will not and cannot go back to the old conditions of life any more than the butterfly can return to the chrysalis. Their experience has set them to thinking. They have had a vision of a new social order; and they have dreamed of it and thought about it till they have come to believe it can be made a reality. Any plans put out by statesmen that do not recognize this, and at least make an attempt to gratify the longing, will be worse than useless; they will merely delay the solution of the problem, and they may lead to much suffering and hardship.

Instinctively the mind seeks guidance from the country's experience at the end of the Civil War. At the close of hostilities conditions were so ominous that European critics predicted business stagnation, social disorder, and the overthrow of democratic institutions. Yet there was no interruption of business, no social cataclysm; and the army melted away into the ranks of industry without a ripple of disturbance. The reason universally given for this remarkable transition from war conditions to peace is the fact that the country possessed a vast area of unoccupied land. Soldiers were given farms of 160 acres for the mere cost of recording deeds that are now worth from one hundred to two hundred dollars an acre. Civilians were permitted to take these farms at a dollar and a quarter an acre. Not all soldiers went upon the land, but many of them did; and those who did not found places that had been given up by civilians who went from the cities of the East to the free land of the West. Besides, the settling up of the new country required the building of railroads, cities, and all that goes to make up civilized life. But the basis of the new order was the fertile land of the vast public domain. Upon this free land a man with almost no capital could go and make a comparatively good living, a living far above that of the peasantry of Europe, and better than what had previously prevailed in the older parts of the United States. So remarkable, indeed, was this recovery from the devastation of the Civil War, and so pronounced the business prosperity, that it led to an era of speculation, in which the price of land mounted so high that it led to a panic ten years after the war.

This experience of the country after the close of the Civil War has been so vividly impressed upon people's minds that few persons doubt that the present problem could easily be met if another Mississippi Valley could be added to the public domain. Nor would there be any doubt if a new market could be found to absorb all the goods that our industries can produce. We cannot have a new Mississippi Valley added to the country; and any markets there may be abroad will be eagerly sought by other nations. But the lack of new territory or foreign markets need not leave us hopeless. Both requirements can be met within our own borders. Of the 878,798,325 acres embraced in the farms of the United States, as shown by the Census of 1910, nearly one-half, or 400,346,575 acres, were unimproved. If there be added to this the arid lands that can be irrigated, the swamp lands that can be drained, and the large areas held by individuals, railroads, and other corporations, it will be seen that the unused arable land in the United States far exceeds the amount in use. Nor does this by any means mark the extent of our opportunities for employment. The undeveloped mineral and timber lands, the oil lands, and the water power exceed those in use. The same is true of cities, where the vacant and the partially improved lots are greater in number than the fully improved. It is apparent, therefore, that there is more than enough land—if it be opened to use—for all who will go upon it. And if the net yield and accessibility to market be considered the vacant land of today will give a larger return to labor than that taken up in the years following the Civil War.

But this is not our only means of relief. A potential market is at hand for all that labor and capital can produce on this land. And what is of more importance, this market is entirely within our own control. If we were compelled to seek a market abroad we should come into competition with other nations as eager as we to sell; and if the rivalry continued as it has heretofore, there would be friction and misunderstandings that might ultimately lead to war.

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Oct. 7, 1918.
Regular weekly meeting came to order at 7 p. m., Ed. Andersen presiding. Secretary reported shipping good. Full Shipwreck Benefit was awarded to eight members of the crew of the steam-schooner "Coquille River."

HARRY INGWARDSEN,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Sept. 30, 1918.
No meeting. Shipping slow; men scarce.

J. ETCHELLS, Agent.

Room 11, de Cosmos Block, 1424 Government St.

Vancouver, B. C., Sept. 30, 1918.
Shipping fair.

WM. HARDY, Agent.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Sept. 30, 1918.
No meeting. Shipping and prospects fair.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, Sept. 30, 1918.
Shipping medium.

P. B. GILL, Agent.

84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Sept. 30, 1918.
No meeting; no quorum. Shipping fair.

ED. ROSENBERG, Agent.

P. O. Box 6. Tel. Main 557.

Portland Agency, Sept. 30, 1918.
Shipping good; members scarce.

JACK ROSEN, Agent.

88½ Third Street. Tel. Main 6013.

San Pedro Agency, Sept. 30, 1918.
Shipping good; members scarce.

HARRY OHLSON, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Sept. 23, 1918.
Shipping good; prospects fair.

R. H. BLACKWOOD, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Oct. 3, 1918.
Regular weekly meeting was called to order at 7 p. m., Ed. Andersen in the chair. Secretary reported shipping fair A resolution to purchase $2,000 of the Fourth Liberty Bond issue was declared carried. The full Shipwreck Benefit was ordered paid to one member wrecked on the steam-schooner "Coquille River." Nomination of officers for the ensuing term was proceeded with.

EUGENE STEIDLE, Secretary.

42 Market Street. Phone Kearny 5955.

Seattle Agency, Sept. 26, 1918.
Shipping fair.

LEONARD NORKGAUER, Agent.

Grand Trunk Dock, Room 203. Phone Main 2233. P. O. Box 214.

San Pedro Agency, Sept. 25, 1918.
No meeting. Shipping fair; few members ashore.

HARRY POTHOFF, Agent.

Sepulveda Bldg., 128½ Sixth Street. Phone, Home 115; Sunset 66 W.

DIED.

Olaf Johnson, No. 162, a native of Norway, age 56. Died at Alaska, 1918.

Andrew Mardison, No. 1338, a native of Finland, age 37. Died at San Francisco, Cal., Oct. 3, 1918.

George Wills, No. 555, a native of Scotland, age 48. Died in the wreck of schooner "Bertha Dolbeer," January, 1918.

Ten vessels to be launched by the United States Shipping Board are to be named by ten Pacific Coast cities that make oversubscriptions in the Twelfth District in the Fourth Liberty Loan campaign. Ten counties in the district will be given the honor of naming ten fighting tanks and choosing their sponsors.

FACTS ABOUT ALASKA.

What has been accomplished in surveying the waters of Alaska and what is needed in the way of specially adapted vessels and sufficient men for efficiently pursuing the work in the future are set forth in a recent report, entitled "Safeguard the Gateways of Alaska—Her Waterways," by E. Lester Jones, Superintendent of the United States Coast and Geodetic Survey.

In a period of 50 years, declares the report, the Survey has had only $3,995,906, or an average annual appropriation of $79,918 to expend on water surveys in the Territory. Nine per cent. of the water areas of Alaska have been surveyed in the past 31 years, 91 per cent. remaining unsurveyed at the present time.

The following is an excerpt from the report:

"From 1867 to 1917 there have been approximately 425 vessels wrecked in Alaskan waters, with a loss of about 500 lives. Among these vessels were large sailing crafts as well as freight and passenger vessels, also some Government vessels.

"When we stop to think for a moment of this enormous loss, and consider alone that the National Government has suffered the loss of three splendid vessels worth more than $1,000,000, the serious side of the question is emphasized, especially when we think how much could have been done with this money if it had been applied in surveying the waters of Alaska.

"While it should not be understood that all these disasters have been caused by lack of proper sailing charts and lack of knowledge of currents, it can be said that the greater portion of the wrecks have been directly due to the lack of accurate nautical information which can be furnished by proper surveys.

"The history of the industrial development of Alaska shows that, almost without exception, the establishment of industries and commerce has preceded, rather than followed, the surveys of the locality and that their establishment and development have been greatly retarded and ofttimes entirely suspended by the lack of such surveys.

"The exports from Alaska for the past 50 years have amounted to about $708,000,000, reaching a high-water mark the past year of about $94,709,359, and this does not include, of course, the great amount of fish, lumber, and other products of the Territory that has been consumed by its population.

"The imports to Alaska for the past 50 years have amounted to $412,400,000, reaching the high-water mark in 1917, $44,431,600. These figures show briefly the enormous amount of shipping necessary to handle this large amount of trade.

"For the first 30 years after the purchase of Alaska by the United States a few small vessels only were required for the commerce between Alaska ports and the ports on the Pacific Coast of continental United States. In 1917 there were not only 3963 vessels, with a tonnage of 1,818,312, entering and clearing Alaska, but instead of being vessels of 10 or 12 feet draft, as were the earlier ones, we now have them up to 28 feet. In other words, when the work of the Coast and Geodetic Survey is at its lowest ebb there, Alaska's prosperity is greater than ever before.

"Few people realize or even think of the Territory's enormous area. From Dixon Entrance, on the international boundary line, to the farthest Attu Island, it is nearly 3000 miles. Along this stretch of coast there are about 465 islands in Alaska containing one or more square miles, and innumerable smaller ones. The longest island is Prince of Wales, 131 miles long and 39 miles wide, while Kodiak Island has the largest area, 101 miles long and 63 miles wide—equal to the combined areas of Connecticut and Rhode Island.

"The total area of Alaska is 586,400 square miles, or nearly twice the size of the original 13 States of the Union. To this we can add seven other States east of the Mississippi River and still we do not have the amount of area in Alaska. Norway, Sweden, Finland, England, Scotland and Ireland do not contain as much territory as Alaska. Germany, France and Spain have only a trifle more area than this Territory.

"As to the water areas, Alaska has 26,000 miles of coast line, or about 6,000 miles more than the entire Atlantic, Gulf and Pacific coasts of continental United States.

"If the map of Alaska is placed over that of continental United States, with the town of Ketchikan (in the southeastern corner of Alaska) on Jacksonville, Fla., the western island of the Aleutian Group will be found at Santa Barbara, in California.

"Alaska's high mountains have their snow fields and glaciers. They are the loftiest and greatest in North America and cover a broad expanse of area. On the other hand, Alaska has wide areas of valley lands, timber, and has many varieties of climate, as varied as can be found in the Eastern or Middle States, controlled largely by the number of mountain ranges, also by the Pacific Ocean, which has the same effect on the climate of Alaska as the Atlantic Ocean has on Great Britain and Norway.

"Although Alaska has been in our possession for a half century, ignorance of its varied climate has been widespread, as has also the general misunderstanding of its winters. It has led to not a few blunders both in the administration of the Territory and also in plans for its investigation and development. Many people to this day speak of it as the land of ice and snow and few realize that part of this Territory has a temperate climate.

"The permanent snow and ice fields of Alaska are situated on the mountain slopes, as they are on the Swiss Alps, and cover only a very small percentage of the total area.

"In comparing Alaska with other countries of similar latitude and climate a close relationship is found to Finland, a country of considerable agricultural importance. Finland and Alaska are largely included between the parallels 58 degrees and 70 degrees north latitude. Alaska is bordered on the north by the Arctic Ocean, and Finland nearly touches the Arctic. The cultivated area in Finland comprised about 7,000,000 acres in 1901, while Alaska is supposed to have 64,000,000 acres of land available for agricultural pursuits, including grazing. In one recent year Finland produced 36,731,660 bushels of grain, 29,887,398 bushels of potatoes, and other marketable farm products. The output of butter for one year amounted to 26,585,600 pounds. Finland exported in one year $8,679,400 worth of live animals, meat, game, and butter products, and $46,012,000 worth of wood pulp, paper, and manufactures of wood. These figures are given simply to show what a country similar to Alaska is producing on one-ninth of the available land."

SEIZED SHIPYARD LAYS KEEL.

A German-owned shipyard in the United States laid its first keel for the new American merchant marine on September 28. This event took place at St. Andrew's Bay, Millville, Florida. The company, known as the American Lumber Company, has been taken over by Alien Property Custodian A. Mitchell Palmer, and is now under American management.

Chairman Hurley of the Shipping Board wired President William L. Wilson of the Board of Directors as follows:

"I regret exceedingly that the press of business will prevent my being with you at the laying of your first keel. This is an occasion of unusual interest, and I would be glad to assist all I can in bringing this ceremony to the attention of the American people."

The invitation from the representative of the Alien Property Custodian to Chairman Hurley had this to say:

"I am very anxious to show you personally that what Mr. Palmer is doing to turn this German-owned industry into vessels for Uncle Sam and also to show you the tremendous possibilities of St. Andrews Bay which the Germans discovered twenty years ago, and which Mr. Palmer is now bringing to the attention of the country."

AN INSIDIOUS ATTACK.

"The Republican Publicity Association, which is collecting $1,500,000 from manufacturers to take Congress away from the President," says the Providence News, "has begun its campaign of vilification in a statement sent broadcast, accusing the President and the Democratic party of using the war as a mask to find jobs in the Labor Department for men who cannot find work elsewhere.

"The Republican attack is published with the title, 'Under the Robe of War,' and insinuates that the Administration is blackjacking Congress into voting money for alleged war purposes, when the real intent is to find jobs for the faithful. No Republican Senator would dare stand sponsor for this scurrilous attack upon the President and the Labor Department, but the Publicity Association is used to make it over the signature of Jonathan Bourne, Jr.

"The real trouble is that this money will be expended by bureaus in every State to provide labor for factories. Big employers, after August 1, will have to take men sent by the several State bureaus, instead of men hired by strike-breaking agencies. The effort of the Government to bring labor and employer together without the assistance of outside agencies is denounced as a political steal. Under the new method no man need leave his State to find a job. It will be found for him by the Government during the term of the war. This is what is called graft by the Republican gentlemen, who, under the lead of Will Hays, of Indiana, have started out to get control of Congress.

"This is only the first attack in many planned on the patient man in the White House and his associates, who are working out the problems of the war. The stupid people behind the scheme will hear from the American people in November."

APPRECIATION OF FURUSETH.

EDITOR, SEAMEN'S JOURNAL:

In reading the portions of the speech of Mr. Frank P. Walsh, quoted in a recent issue of the SEAMEN'S JOURNAL, concerning our respected leader, Mr. Furuseth, a thought came to me which I desire to put before the readers of this paper.

Everything that Mr. Walsh said about Mr. Furuseth is true, and much more. For the last ten years I have been closely identified with the enforcement of rights of seamen and have sought to find remedies for the evils affecting him and his vocation.

I was first identified with a semi-charitable institution, The Legal Aid Society, the purposes of which were good and which, while I was attorney in charge of its seamen's branch, I am sure, did considerable to right the wrongs of seamen and enforce their rights. I have had an opportunity to observe the workings of various church societies and other eleemosynary organizations, who have attempted to assuage the wounds of the suffering seamen. I have studied their methods, I have observed the operation of various committees and executives appointed by city and State governments for the purpose of controlling shipping masters and boarding masters.

I have observed the efforts of the United States attorneys to enforce various statutes of Congress, intended to prohibit crimping, etc. In fact, have assisted United States attorneys in the preparation of many cases in the city of New York. Various kinds of legislation and methods were suggested by these organizations and some of them made recommendations to Congress on the subject, but infinitely more good has been accomplished by the seamen's unions of the United States under the leadership of Andrew Furuseth in obtaining the passage of the Seamen's Act, abolishing involuntary services and in giving to seamen of all ships coming to our ports, the right to demand a certain portion of their wages and throwing the courts of the United States open to the enforcement of the act, than has been accomplished during the past three centuries at least, by all of the eleemosynary institutes, municipal, State and Federal Governments combined.

This may sound like a big statement and it is, but if I know anything about the history and development of the Merchant Marine of the United States and other nations; if I know anything about the conditions which have brought about the condition of involuntary servitude and its attending evils in which the seaman has lived for the last sixty years, then this statement is not extravagant.

So much for his accomplishments. As a man of brains, he ranks among the first of his generation. There are few men in the United States who possess and have used the acumen, foresight, tact and tenacity of purpose possessed, and demonstrated by him. His struggle for recognition of the rights of seamen commenced years ago.

As stated by Mr. Walsh, for twenty years he labored at Washington, educating our Congressmen and Senators on the importance of a Merchant Marine. At last he made them understand. The Seamen's Act is the result. His labor has been performed under the greatest of difficulties and his accomplishments have been complete. He has attained the goal for which he was striving.

No man possesses to a greater degree the qualities of integrity, honor and ability of the all-around American quality, than Mr. Furuseth. He is the embodiment of the spirit of liberty and true democracy in which this nation was conceived. He is deserving of the greatest honor.

I have no doubt that after Andrew Furuseth has passed away, the great American people, then being in possession as they undoubtedly will be, of a tremendous Merchant Marine, turning back the pages of history will discover what an important part in its development was played by Andrew Furuseth. They will desire to erect some visible monument to his greatness and the greatness of his work.

There has been a tendency of late years to give recognition to artists and leaders while they are still alive to enjoy the honor that is due them. I am one who believes that such recognition should be given to Andrew Furuseth while he is still alive. I saw him just the other day and I believe he will live for quite a time as he is apparently in excellent health.

I am writing this letter for the purpose of inviting members of the seamen's unions, delegates and others, to write me and express their opinion on the proposition of taking up a subscription from seamen in sums from one to five dollars, to be put into a fund, which might be called the Furuseth Memorial Fund or something of that sort.

When sufficient funds are raised, a proper statue of Mr. Andrew Furuseth can be erected at New York or San Francisco, or both places. Permission of the authorities of the city of New York will probably be obtained for the erection of such a monument in Coenties Slip or on South Street, New York. The funds could be sent direct to some trust company.

I have not consulted Mr. Furuseth about this proposition for I know that he would say "No." It seems to me, however, that if the seamen of the world who do know his work and who were benefited by his efforts, desire to do something to express their appreciation of him and his work, that nothing on earth can prevent them from doing it.

I shall await with interest replies to this communication.

Respectfully yours,

SILAS BLAKE AXTELL.

New York, Sept. 30, 1918.

AN AUGUST CONCEPTION.

Samuel Taylor Coleridge, poet and essayist, writing some 75 years ago, said:

"The possible destiny of the United States of America as a Nation of a hundred million of free men, stretching from the Atlantic to the Pacific, living under the laws of Alfred and speaking the language of Shakespeare and Milton, is an august conception."

The United States is now a Nation of a hundred million and more, stretching from the Atlantic to the Pacific, and reaching out east takes in Hawaii and the Philippines, in the north Alaska, and in the south the Panama Canal. But grander than its physical is its moral greatness. Its fairness and justice, its courage and power, its maintenance of right and freedom cover the world.

The destiny the United States is now fulfilling is a more august conception than even the imagination of the author of Kubla Khan conceived of less than a century ago.

ARMY UNITS.

Some knowledge of army facts and figures is almost essential now-a-days and it is well to know that

An army corps is 60,000 men.
An infantry division is 19,000 men.
An infantry brigade is 7,000 men.
A regiment of infantry is 3,000 men.
A battalion is 1,600 men.
A company is 250 men.
A platoon is 60 men.
A corporal's guard is 11 men.
A field battery has 195 men.
A supply train has 283 men.
A machine gun battalion has 296 men.
An engineer's regiment has 1,098 men.
An ambulance company has 66 men.
A field hospital has 55 men.

A major general heads field army and also each army corps.

A brigadier general heads each infantry brigade.

A colonel heads each regiment.

A lieutenant colonel is next in rank below a colonel.

A major heads each battalion.
A captain heads each company.
A lieutenant heads a platoon.
A sergeant is next below a lieutenant.
A corporal is a squad officer.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

corn broom makers in New York City were organized, their wages were from $12 to $18 a week. Now a signed agreement calls for rates ranging from $40 to $55 a week, with the work week reduced from 52½ to 50 hours. In Chicago a 100 per cent. organization has raised wages $1.80 a day for eight hours. The old rate was $4.20 and the new one is $6. "We also secured an agreement for all helpers, with $12 a week for new girls and 10 to 20 per cent. increase for all now working in the factories," writes Boyer. "Under our old system of low dues and small per capita tax, this would be impossible."

Urge Organization.

Officers of the American Federation of Labor have called the attention of all affiliates to a resolution passed by the last convention instructing the Executive Council "to plan and carry into effect the most intensive campaign of organization within its power, and urge and aid all international, State and central bodies to do likewise."

At its recent meeting the Executive Council directed officers at headquarters to carry into effect the above instructions. Acting President Alpine and Secretary Frank Morrison now urge affiliates to exert every possible effort to conform to the declarations and recommendations of the convention. "Everything within our power," it is stated, "has been done and will continue to be done through the assistance and co-operation of the limited number of special organizers in the employ of the American Federation of Labor to carry on an active organizing campaign in as extensive a territory as is possible under existing conditions and circumstances. Our very best efforts are being put forth to organize the workers in the steel industry."

Extravagant Claims Cause Labor Shifts.

The United States Employment Service Bulletin tells these instances of how employers are responsible for the costly labor turnover that is hampering war production:

"Several months ago a large corporation near Philadelphia inserted large advertisements in Ohio newspapers offering certain classes of workmen a little higher than the normal wage then prevalent in Ohio, and added, 'and double time for Sundays and holidays; plenty of overtime all the time.'

"Hundreds of men left war manufacturing jobs in Central and Northern Ohio and paid their way to this plant. A very large number of them were of crafts not yet needed by the plant, although the advertisement had called for them. These men were turned away. They had thrown up jobs on war work. They had lost many days and wasted considerable sums upon travel and subsistence. Many of them were left destitute and hundreds drifted into nearby cities, broken in spirit and embittered against the Government and our country.

"For several weeks the municipal authorities of these cities were compelled to feed and lodge large numbers of these broken men, and there is good reason to fear that many of them have become casual workers. Those who were actually hired found the promise of 'plenty of overtime' was not kept, while the locally impossible housing conditions and living costs soon disgusted and drove them out to seek more congenial even if nominally less-well-paid employment.

"An enterprising labor agent of a Government plant in the South, desiring to build up his organization, hired a brass band and sent it in a motor truck to visit points frequented by negro farm hands on Saturday nights. Torchlights, promises of a month's annual leave with pay, and a little fervid oratory built up his needed force quite rapidly. It also shut down about seventy-five square miles of farms."

Want Auto Truck Drivers.

The War Department has created a motor transport corps which will control all motor vehicles in the army. Each American army will require 154,747 men, and by the time 4,000,000 troops are landed in France nearly 500,000 men will be engaged in motor transport work. At the present time the corps has an average of 1500 trucks working in convoy trains in this country and they travel an approximate distance of 100,000 miles every twenty-four hours. These trucks do not include those employed in army posts and cantonments and carry freight from every section of the country. In France they are doing similar service.

Men qualified to drive motor vehicles are needed by the thousands, and the War Department asks those interested to write to the chief of motor transport corps at Washington for information. This also applies to men who now have deferred classification.

WATCH THESE ISLANDS.

The announcement is made that the Japanese government has decided to institute civil administration in the South Pacific islands now under Japanese military occupation. Simply as a temporary measure of administration, this is of course very proper. The islands can be administered with less trouble by civil than by military officials. But as the beginning of a system which may easily become permanent it is a challenge to the attention of America.

These are precisely the islands in the Pacific which ought to belong to the United States. They would have been acquired at the same time as the Philippines except for a piece of sharp practice on the part of the Spanish commissioners, who pretended they were not for sale and then proceeded to sell them to Germany as soon as the treaty was signed. We, of course, lost our rights to them then, unless this incident may be held to constitute a residuary option of purchase. And no one has any right to them now except Japan.

They are, however, of no strategic value and of very little commercial value to Japan, while they are of great strategic value and of some incidental commercial value to us. They are precisely the islands which dominate the route from Hawaii to the Philippines. We could therefore afford to pay for them a price in money or in kind which Japan could very well afford to accept. We could afford to surrender American Samoa to England in order to clear the condition in the Pacific south of the equator for uninterrupted British or Australian occupation, and Japan could afford, for a consideration, to clear the Pacific tropics north of the equator on the pathway between Honolulu and Manila for us. That consideration could be in money, to cover Japan's expenses in taking and holding the islands, and it could be, by the consent of all the Allies, in land in Manchuria or elsewhere, where it would give opportunity for Japanese expansion. At any rate American statesmen ought not to lack the foresight which Japanese statesmen are showing in making preparations for the future of these small but strategically important islands.—Fresno Republican.

AFTER-WAR CONDITIONS.

(Continued from Page 7.)

But a market within the country can be created that will be entirely free from these dangers. This home market is not to be developed by shutting out foreign goods, as protectionists have proposed, but by increasing the consuming power of our people.

It is a matter of common knowledge that as man's income grows his expenditures increase. The experience of the immigrant in this country is typical. Without capital, ignorant of the language and ways of the country, and accustomed to a lower scale of living, he accepts the commonest labor at the lowest wages. He crowds his family into one or two rooms in as dilapidated a building as the city will permit to stand, and gives them the cheapest food and clothes. His household furnishings are pitiably meager and comfortless. That this condition is due to necessity and not to choice is evident from the fact that no sooner has his income increased, through greater efficiency and the aid of his children, than he moves to a larger apartment. As his income continues to grow he moves to a better neighborhood, furnishes his home with comforts, and supplies his family with better food and clothing. The younger members seek more education and acquire a culture and refinement that were denied their parents. This is not a rare exception; it is the rule. As the laborer's wages rise his expenditures multiply.

Here is the market for the products of the labor that will be made available at the close of the war. Health boards tell of vast numbers of under-nourished school children. Settlement workers show how many families are in want of sufficient food and clothing. And social surveys have laid bare the mean and abject conditions of countless families in city, town and country. Above these are more families who though blessed with the necessaries of life would appreciate the simpler luxuries. These potential demands become actual the moment wages are increased. But how shall this be done?

A builder may say: "I will put up new apartment houses on this vacant land; then these families living in one or two rooms will have comfortable homes. The material I use will help business, and the men I employ will distribute wages." But the lot that has lain unused for years is owned by a man who demands a price so high that the builder would have to pay wages lower than workmen will accept, or charge a rental higher than poor families can pay. And the building is not put up. An engineer may say: "I will develop this water power, and furnish a force so cheap that all products can be sold at lower prices, which will increase consumption and multiply the demand for labor." But he finds the unused water power is owned by some one who asks an impossible price. A capitalist may say: "I will develop this mineral land, and supply more coal, iron, or copper; it will employ labor and furnish cheaper materials for other industries." But the undeveloped mineral lands are owned by some one who demands a forbidding price. An unemployed workman may say: "I will till a bit of this unused farm land, and raise some food for those hungry city families as well as for myself." But when he attempts to apply his idea he finds that the unused land belongs to a man who asks for it more than it is worth. So he goes into the labor market and depresses wages, while the hungry children remain unfed.

There is only one thing necessary to give employment to all labor at high wages, and satisfy all reasonable wants: Put to use the idle lots, mineral lands, and farm lands. This cannot be done under present conditions. The price is prohibitive, and every increase in demand raises the price.

What are the statesmen, publicists, and leaders of public opinion going to do to meet the situation?—The Public.

A health and efficiency campaign is being conducted among the shipyards of Portland by the health and sanitation section of the United States Shipping Board. This work looks toward sanitation in the yards, in housing quarters, and also guards against the social evil, the Shipping Board holding that fitness of men physically is as necessary in the shipyards as in the Army.

ROUGH TREATMENT.

EDITOR, SEAMEN'S JOURNAL:

On September 3, four union men (Larsen, Scully, Petersen and MacInnis) and two United States Shipping Board men signed articles as A. B.'s to go to Quebec, Canada, to join the S.S. "Lake Pearl" and bring her to Boston. We left Boston that night at 8:30, arriving aboard the ship on the following day. The crew that brought this ship down from the Lakes was paid off after we got on board and we learned that coming down from the Lakes she carried two wheelsmen and six deck hands. This was subsequently borne out by her inspection certificate which called for eight seamen. The two Shipping Board men were made quartermasters, leaving us four union men to do the deck work. Before heaving up that evening we went to the mate and told him we were short-handed and asked him if he would pay the customary short-hand money. He said he would. On September 5 the ship anchored off Fathers Point, Quebec. When the afternoon watch (Larsen and MacInnis) went on deck the mate ordered them into the coal bunkers to trim coal, and when they refused he threatened them with handcuffs. They went into the bunkers and trimmed coal for three hours. There was no shortage in the fireroom force, and as the ship was anchored it is hard to understand this action of this mate.

On September 6 Ole Larsen was so sick he couldn't turn to, MacInnis keeping the watch on deck during the day and the look-out at night. On September 7, afternoon watch, while keeping lookout on bridge the mate ordered MacInnis into bunkers to trim coal. He worked about half an hour when he had to knock off as he was feeling ill. We arrived at Sydney, Cape Breton, on Sunday forenoon, the 8th, and anchored. By this time three seamen, a quartermaster, an oiler and two firemen were under the weather. We asked for a doctor. We helped to dock the ship early that afternoon. Larsen was not fit to go on deck, but he went. That night at 9 o'clock the second mate ordered us to turn to and take off hatches. We refused, as the three of us were too sick. Monday, the 9th, we were unable to turn to. The doctor came aboard in the morning and looked us over. Scully's body was broken out in a sort of rash. The doctor gave Larsen a few pills and MacInnis some medicine. Nothing was done for Scully. Tuesday, the 10th, at 5 o'clock in the morning, the captain came aft to turn us to. He said he had a letter from the doctor stating that two of us (Larsen and MacInnis) were not sick, but Scully was. We asked him why the doctor had given us medicine if we were not sick and had not given any attention to Scully, who was very sick. The captain made all kinds of threats as to what he would do to us if we didn't turn to and get the ship ready for sea. MacInnis turned to first and then Larsen. Larsen was a very sick man and should not have been compelled to work. That night while at sea the quartermaster was taken bad and MacInnis took his trick at wheel from midnight until 4 and the 8 to 12 morning of Wednesday, the 11th. We arrived at Halifax that afternoon. On Thursday, the 12th, a United States Navy doctor came aboard and ordered Seaman Larsen and Quartermaster Slinger ashore to the hospital. He told Scully that he had had the measles.

Bear in mind that Larsen was one of those whom the doctor in Sydney said was not sick. With the loss of these two men we now had only four men on deck. We left Halifax that evening and arrived at Searsport, Me., just before noon on Saturday, the 14th, and anchored. One of the firemen was taken from the ship and sent to a hospital in Belfast, Me., where he died the following day. He also was one of those whom the doctor in Sydney said was not sick. On Tuesday, the 17th, the ship docked and Seamen Scully, Petersen and MacInnis claimed their discharge. The mate then refused to pay them the short-hand money which in Quebec he said would be paid.

The captain's name is Albert Smith. The ship is operated by the Coastwise Transportation Company.

ALEXANDER S. MACINNIS,
Member of Eastern and Gulf Sailors' Association.

Boston, Mass., Sept. 27, 1918.

MAMMON IS MERCILESS.

Speaking of the Supreme Court decision declaring the so-called anti-child labor law unconstitutional, the New Republic remarked:

"Whatever the comparative force of the two opinions (majority and minority) the effect of the majority decision adverse to the law cannot fail to be injurious both to the welfare of the American people and to the prestige of the Supreme Court."

In passing it might be said that a study of the history of Supreme Court decisions would at least have spared commentators like the able New Republic any surprise. The Dred Scott, Danbury Hatters and like decrees, for example. The recent decision re-establishes the sacredness of States' rights and with these rights go the continued privilege of the posterity of a slave oligarchy to exploit and stunt childhood of America. Sedition laws protect the Supreme Court from criticism. But as five members of this august body by their decision put "States' rights" on one side of the "scales of justice," we should at least be permitted to remind these jurists of a picture that hangs on the other side.

The chapter, "The Crimson in Cotton" in the book entitled "Children in Bondage," is eloquent in its description of conditions that make laymen hot with indignation. Read it:

"For a day or a night at a stretch an army of unprotected little ones do some one monotonous thing—abusing their eyes . . . dwarfing their muscles . . . befouling their lungs by breathing flecks of flying cotton. . . . And these are not the children of recent immigrants hardened by the effete conditions of foreign servitude. Nor are they negro children who have shifted their shackles from field to mill. They are white children of old and pure colonial stock. Think of it! Here is a people that has outlived the bondage of England; that has seen the rise and fall of slavery—a people . . . that must see their latest born drag on in a base servility that reminds us of the Saxon churl under the frown of the Norman lord. For Mammon is merciless."

The book is compiled by Judge Ben Lindsey, Edward Markham, the poet, and George Creel and its contents taken from Government and State records. It is a picture of America's shame regarding the welfare of its children.

Labor News

Colored musicians in Baltimore have organized and are affiliated with the bona fide trade union movement.

Foundry employers of Marion, Ohio, have refused the wage demand of Iron Molders' Union No. 386 and have also refused to arbitrate the question. Now the men are on strike and the employers talk of "interfering with war production" because these workers demand rates that will meet increased living costs.

The Utah State Federation of Labor convention declared for a women's minimum wage law. Officers were instructed to urge legislation that would prevent private insurance companies from selling liability insurance in Utah. Private employment agencies were condemned and the law making body will be asked to legislate them out of existence.

The attempts of certain interests to curb a free press were condemned by the Massachusetts State Federation of Labor convention. Equal pay for women where they do the same work as men was urged and Congress will be asked to provide railroad mail clerks with a standard work day. A conference of central bodies will be called in the near future to discuss after-the-war problems.

According to the Labor Review a bunch of non-union street car men have broken all records. When the union car men struck this handful of company men stayed in. The strikers won and the National War Labor Board awarded them wage increases, which included the non-unionists, who accepted the raise and then asked the labor board not to recognize the Street Car Men's Union.

Members of the Typographical Union employed in commercial shops at Detroit, Mich., have received the big end of an arbitration award and their wages are increased from $25 to $29 a week. The union first demanded a 25 per cent. increase. The employers granted a 5 per cent. raise and agreed to arbitrate the remaining 20 per cent. difference. The printers accepted and Judge Wilkins, with his 16 per cent. award, nearly approached the typos' original demand.

Organized moving picture operators in Los Angeles are charged with "hampering the war." Theatrical managers want to employ women, thereby releasing man power, but the operators, they say, object. Now the operators are unkind enough to expose these "patriotic" managers by showing that they would employ the women at a lower rate and without any apprenticeship, to the danger of every one in these theaters, as proved by frequent fires in houses where amateur operators are employed.

The Best Steel and Casting Company at Stonehurst, Cal., has granted the eight-hour day, wage increases and double time for overtime to its foundry employes. Wages of casting chippers are advanced 55 cents a day. The company made these grants when over 100 of its employes joined the Foundry Employes' Union No. 54. Many of these workers were former members of the union but accepted their employer's promise to "protect their interests." It seems that the company has been busy with other matters and the workers concluded to help themselves.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912,

of The Seamen's Journal, published weekly at San Francisco, Cal., for October 1, 1918.

State of California,
County of San Francisco—ss.

Before me, a Notary Public in and for the State and county aforesaid, personally appeared S. A. Silver, who, having been duly sworn according to law, deposes and says that he is the Business Manager of The Seamen's Journal, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Name of— Postoffice address—
Publisher, Sailors' Union of the Pacific, San Francisco, Cal.
Editor, Paul Scharrenberg, San Francisco, Cal.
Managing Editor, Paul Scharrenberg, San Francisco, Cal.
Business Manager, S. A. Silver, San Francisco, Cal.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent. or more of the total amount of stock.)

Sailors' Union of the Pacific, San Francisco; not a corporation. Principal officers of the Sailors' Union: Andrew Furuseth, Secretary, San Francisco; John H. Tennison, Assistant Secretary, San Francisco.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.)

None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

S. A. SILVER, Business Manager.

Sworn to and subscribed before me this 27th day of September, 1918.
(Seal) MARGUERITA S. BRUNER.

Home News

The Emergency Fleet Corporation, Philadelphia, is having plans prepared for the erection of a number of new buildings to form a community center near Gloucester City, N. J., for employes of the shipbuilding plants in that vicinity. The structures will include apartment houses, dwellings, store buildings, school house and other buildings.

Under an executive order just announced, the President authorizes the placing of war supply contracts with the heads of prisons and reformatories at prevailing prices, and directs that prisoners engaged on such contracts shall receive wages corresponding with those paid for similar work in the vicinity. Congress already has provided for industrial plants at some Federal prisons.

Only a month's supply of gasoline remains in the country at the present rate of consumption, according to a statement to the Senate by Fuel Administrator Garfield. Objection was raised in the Senate to the fuel administrator's recent request that the Sunday use of pleasure automobiles be discontinued. In defending this action, Mr. Garfield said there will be a deficit this year of 1,000,000 barrels of gasoline.

The United States Senate on October 1 refused to grant the request of the President that the woman suffrage resolution be passed as a war measure. After five days of bitter debate, corridor conferences and cloakroom negotiations, the Susan B. Anthony Federal amendment resolution, enacted by the House last January, received on the final roll call two votes less than the necessary two-thirds majority. Fifty-four Senators were recorded for it and thirty against it, with twelve absent and paired.

A system of Government-owned deep sea-level canals extending from Massachusetts to the South Atlantic States is recommended in a report submitted to the Senate by Secretary Redfield in rsponse to a resolution adopted last July. Such action would not only be of wide commercial value, but would be of great military value as well, said Secretary Redfield in a letter accompanying the report. Permanent acquisition by the Federal Government of the Cape Cod and the Chesapeake and Delaware canals and their prompt improvement, as well as the early construction across New Jersey of a sea-level canal having a minimum depth of 25 feet, is recommended. The Cape Cod canal is being operated now by the Railroad Administration.

The House of Representatives has accepted the Senate's prohibition amendment to the Food Stimulation bill, and the Nation will become dry on June 30 next and remain so until the American forces are demobilized, if the action of Congress is approved by President Wilson. The vote in the House was 171 to 34. The amendment as finally passed provides that after May 1, 1919, and until the termination of demobilization, "no grains, cereals, fruit or other food product shall be used in the manufacture or production of beer, wine, or other intoxicating malt or vinous liquor for beverage purposes"; that after June 30, 1919, and until the termination of demobilization, "no beer, wine, or other intoxicating malt or vinous liquor shall be sold for beverage purposes except for export."

Domestic and Naval

Secretary of the Navy Daniels has officially removed the name of the collier "Cyclops" from the register of the Navy.

Edward F. Cullen, president of the Cullen Barge Corporation, of New York, announces that this concern has fifteen barges under construction. These boats range in capacity from 1000 tons to 2500 tons each. Several of them will be launched before the end of the present month and will be in commission by the end of the season. The boats are being built at Rondout, on the Hudson, and will be used for carrying grain, coal and merchandise from Buffalo to Boston by the Erie Barge Canal and the Hudson River.

A huge dry dock, where ships damaged by U-boats will be reclaimed, is said to be planned for the property of Ichabod T. Williams & Sons, lumber dealers, at Stapleton, S. I., just leased by the Government for a term of twenty years. The tract has a water frontage of 1500 feet, and includes everything from the Tompkinsville line to the landing at Stapleton, excepting the Brady property. It is understood that about $1,300,000 has been appropriated for the improvement of the land. Recently the Government took over the plant of the Merritt & Chapman Derrick and Wrecking Co., in Bay street, Stapleton.

Preparations are being made to lay the keel of the first of ten oil tankers to be built by the Terry Shipbuilding Corporation, Savannah, Ga., for the Emergency Fleet Corporation. The contract for the ten tankers is understood to represent a total of about $16,000,000, the cost of each vessel being $1,600,000. The Terry concern has also been awarded a contract for the building of two floating dry docks, each with a capacity of 10,000 tons. The estimated cost of each dry dock will be slightly in excess of $1,000,000. One of these floating dry docks will remain in Savannah, while the other will be towed to some other port.

Success continues to mark the precautions taken to protect shipping off our coasts and waters adjacent, and there is every reason to believe that U-boat effectiveness "over here" has been in large part if not wholly eliminated. Sinkings in other sections of the war zone although still a matter of record, show no tendency to increase, but rather the reverse. A gratifying feature in this latter connection is the knowledge that in several instances the vessels attacked and wounded have been able to make port or be beached in locations permitting ready salvage for repair and early recommissioning.

In order to adequately handle the ponderous overseas mails augmented by the transportation of nearly two million soldiers to Europe, the United States Government has taken over North River Pier 86, at the foot of West Forty-sixth street, New York, and will at once establish a sub-postoffice there. This announcement was made during the week by Major Thompson, supervisor of overseas mail. Pier 86, North River, was recently constructed by the city at a cost of more than $4,000,000, and is considered the most modern structure of its kind in the country. It is 150 feet wide and about 1500 feet in length. Originally it was intended for transatlantic steamship service.

News from Abroad

Prisoners in Germany, including American prisoners, are said by a young French corporal, lately escaped from Germany, to be badly treated and poorly fed. Starvation would be general among them but for the food-parcels sent from America.

Austrian shipping companies are reported to be negotiating the sale of two steamers lying in the Black Sea to Turkish shipowners. The vessels are the Armiathea, 3,891 tons, price ten million crowns; and the Bithynia, 3,121 tons, price seven million crowns.

President Irigoyen has asked Congress to adopt a law appropriating 80,000,000 pesos to increase the size of the Argentine Navy. The first additions are to be cruisers of the latest design, submarines, and hydroaeroplanes. Important naval bases are to be established at Mar del Plata and Puerto Madrin. The proposed law also authorizes Governmental acquisition of Argentine's merchant marine for trading purposes with America and Europe.

Two large shipbuilding plants are being erected in Southern Chile. They will be ready for operation this month, and the building of wooden vessels will begin immediately. The new shipyards are being constructed at Lianao. The wood to be used in shipbuilding is native timber—Chilean oak, spruce and other woods. The machinery for the new vessels will be bought in the United States if it is possible to get it there, otherwise the builders will get it from Antofagasta.

A Spanish royal order just published authorizes, in addition to special permits previously granted, the exploration until the end of the current year of 20,000,000 kilos of olive oil, one-half of which shall be allotted to North and South America, according to a cable from Consul General Hurst, at Barcelona. An export duty of 30 pesetas per 100 kilos will be collected before shipment, and all containers must be engraved or otherwise indelibly marked with trade label, registered or not, showing Spanish origin of the oil.

Interest paid the American Government by the allied countries on war loans now amounts to about $10,000,000 monthly, and within a year is expected to reach $40,000,000 a month. This was disclosed by U. S. Treasury Department officials, who said a few thousand dollars still is due from the Russian Government from the $187,000,000 advanced earlier in the war, but this would be paid as soon as some accounting difficulties are straightened out. Approximately $110,000,000 in interest has been paid so far by allied governments. Current loans are made at 5 per cent.

A spirited piece of salvage work was recently performed on the Yangtse by the Standard Oil Co. river steamer "Meitan." The U. S. gunboat "Palos" had struck a reef ten miles above Ichang, being badly holed forward, and her engines damaged. The "Meitan" got her off, and brought the "Palos" lashed alongside safely into Shanghai, the distance of 976 miles being covered in 81 hours. The feat is the more creditable as the "Palos" had her pumps hors de combat, and the "Meitan" had to use her own during the whole time to keep the water in the gunboat under.

With the Wits

Not His Function.—"I want to know," said the grim-faced woman, "how much money my husband drew out of the bank last week."

"I can not give you that information, madam," answered the man in the cage.

"You're the paying teller, aren't you?"

"Yes, but I'm not the telling payer."
—Boston Transcript.

At the Peace Conference.—"Judge," said the man at the bar, "there's no use of you trying to square this thing up. My wife and I fight just so often and just so long, and we can't help it. So there you are."

"And about how long do you keep it up?" asked the judge.

"About two weeks, judge."

"All right. I'll give you fifteen days in jail; in other words, you are interned for the duration of the war."
—Richmond Times-Dispatch.

Sweet Alice's New Job.

Oh, don't you remember sweet Alice, old sport,
Sweet Alice, so languid and pale,
Who shuddered aghast at the mention of work,
And fainted at sight of a snail?
On a fertile farm in the valley, old sport,
Far removed from the big city's thrall,
There are all sorts of lassies at back-breaking tasks,
And sweet Alice works hardest of all!

—Syracuse Herald.

The Missouri Mule Abroad.—A long and patient but vain effort on the part of a khaki-clad driver to induce a mule, drawing what appeared to be a load of laundry, through the gateway of a local hospital afforded considerable amusement to the boys in blue who were watching the proceedings. The mule would do anything but pass through the gateway.

"Want any 'elp, chum?" shouted one of the boys in blue to the driver, as he rested a moment.

"No," replied the driver, "but I'd like to know how Noah got two of these blighters into the Ark!"—Tit-Bits.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

WHY AN EIGHT-HOUR WORKDAY?

Principles of the Shorter Workday Lucidly Defined.

An opinion and an award just rendered by Mr. Walter Clark of the North Carolina State Supreme Court, acting as an umpire for the National War Labor Board, is of more than ordinary merit because it lucidly defines the principles of the eight-hour work day.

Incidentally, the opinion furnishes a clear and concise reply to those spokesmen for reactionary employers who are still attempting to delay the universal acceptance of a basic eight-hour day in all industries.

Mr. Clark's opinion and award follow, in full:

Interpretation of An Agreement.

This case has been submitted to the National War Labor Board upon the following "Agreement entered into between the members of Local Union No. 364, International Molders' Union of North America, and the Foundrymen of Wheeling and vicinity."

First—That eight (8) hours constitute a day's work for all Molders and Coremakers.

Second—That the wage rate be six dollars and fifty cents for the basic eight (8) hour working day.

Third—All overtime shall be paid for at the rate of time and one-half.

Fourth—Sundays and legal holidays, as provided for in the constitution of the I. M. U. of N. A. (viz., Memorial Day, Fourth of July, Labor Day, Thanksgiving Day, Christmas and New Year's Day) be paid for at the rate of double time.

The only controversy presented is as to the meaning of paragraph 1.

It is clear that that paragraph standing alone would mean the eight (8) hour working day, beyond which the employes cannot be required or permitted to work. Upon the principle that the whole of an agreement should be construed together so that no part shall be invalid, section 2 cannot be held as substituting a basic eight (8) hour day for the actual eight (8) hour day provided by section 1. It is not reasonable to suppose that the employes having agreed upon an eight-hour day, should by the next rule repeal it, by substituting a ten or twelve-hour day for extra compensation.

Camouflaging An Eight-Hour "Rule."

The basic eight-hour rule is not an eight-hour day at all but simply a wage agreement. If the eight-hour day is extended to ten hours then the 50 per cent. added pay for the two extra hours in effect is an agreement to pay eleven hours' wages for ten hours' work, an increase of 10 per cent. It was doubtless thought that the extra 50 per cent. for the extra hours would discourage requiring extra hours, but this has not been the result in all cases, for in some plants ten hours from day to day, every day, has been exacted, and in others even thirteen hours a day has been known to be required. The object of the eight-hour law is to protect the health and lengthen the lives of employes, which would be seriously compromised by an excessive length of the day's work.

It has been seriously contended that the "principles" adopted by this board deprive it of jurisdiction to enforce an actual eight-hour day. Those principles, however, specify that in all cases in which existing law does not require the basic eight-hour day, "the question of hours of labor shall be settled with due regard to governmental necessities and the welfare, health and proper comfort of the workers."

President Wilson, in his address before a joint session of the two houses of Congress August 29, 1916, said that "The whole spirit of the time, and the preponderant evidence of recent economic experience spoke for the eight-hour day. It has been adjudged by the thought and experience of recent years, a thing upon which society is justified in insisting as in the interest of health, efficiency, contentment and a general increase of economic vigor. The whole presumption of modern experience would, it seemed to me, be in its favor, whether there was arbitration or not, and the debatable points to settle were those which arose out of the acceptance of the eight-hour day, rather than those which affected its establishment. I, therefore, propose that the eight-hour day be adopted by the railroad managements, and put into practice for the present as a substitute for the existing ten-hour basis of pay and service." And he recommended "the establishment of an eight-hour day as the legal basis alike of work and of wages in the employment of all railway employes who are actually engaged in the work of operating trains in interstate transportation." Congress enacted what is known as the "Adamson Eight-Hour Law" in consequence.

The Federal Eight-Hour Record.

Previous to that time the Federal eight-hour law, approved June 19, 1912, limited "the hours of daily service of laborers and mechanics employed upon work done for the United States, or for any territory or for the District of Columbia," to eight hours and provided that no laborer or mechanic so employed should "be required or permitted to work more than eight hours in any one calendar day, upon such work."

Judge Alschuler, in his decision in the Packing House case, quotes the above expression of the President, and says: "The public policy of the eight-hour workday has been given oft-repeated sanction by legislation in the majority of the States, as well as by Congress through enactments of various kinds too numerous for specific mention," and quotes the unanimous report of the President's mediation commission on January 9, 1918, which declared "The eight-hour day is the established policy of the country." He further said: "The voluminous evidence adduced at the hearing in support of the contention for the eight-hour day is in the main logical and convincing, and it is particularly to be noted that insofar as concerns the general principle of the eight-hour day no evidence to dispute it was presented. Indeed on behalf of the employers it was repeatedly, openly and frankly admitted that a workday shorter than the ten-hour day was desirable. On behalf of the employers and in the presence of their superintendents it was freely stated that they all believed in a shorter workday; that they had said so, and that there was no room for argument about it." There is a vast body of experience that a ten-hour day shortens the lives of the employes, injures their health, and that in point of production there is an increase by the substitution of eight hours for a longer period. Even if this were not true as to one day, the accumulated fatigue of working more than eight hours for a series of days reduces the production below the quantity produced by strict adherence to that limit.

Greater Production Under Eight-Hour Day.

Especially is this so as to the molder's occupation, the life of whom, working at nine or ten hours per day, subject to the heat and noxious fumes, is said to average not more than fourteen years. In work of this kind, there can be no doubt that greater production will be had by the working of an eight-hour day than by working nine or ten hours.

It is not conclusive, though a subject for consideration, that the majority of the other shops in Wheeling and vicinity are working on a nine-hour basis. All betterment has come by improving conditions, and not continuing them when bad. Improving conditions is the object of this proceeding.

The subject of an eight-hour day is not new, but has been discussed by the general public, by writers and public men and governmental officials for many years. The first act for an eight-hour day was passed by Congress in June, 1868, and provided "Eight hours shall constitute a day's work for all laborers, workmen and mechanics who may be employed by or on behalf of the Government of the United States." This act proved ineffective because, for some reason, Congress had failed to impose any penalty for violation of the act. More effective laws on the subject were passed and were approved August 1, 1892, June 19, 1912, and in the Amendment to the Naval Appropriation Bill, approved May 3, 1917. The latter amended the Statute which had authorized the President to suspend the eight-hour law "whenever Government necessity required it," by providing that while the President in an emergency could suspend the eight-hour day in such case, the basic eight-hour day should obtain and overtime should be paid for at no less than time and one-half.

Since that time the President has acted in conformity with the act but his suspension applies only to the prohibition of working more than eight hours, and does not require it. It is still open to the employes to decline to work longer than eight hours, and in event of a difference with their employers to submit the matter to the National War Labor Board.

Industries With An Eight-Hour Workday.

The railroad employes, from coast to coast, nearly 500,000 in number, are now operating on the basis of the eight-hour day. The same is true of the coal-mining industry, the packing industry, the news print industry, the garment industry, in Government construction, and in the lumber mills and saw mills of the great Northwest.

It may be that there are industries where it is still necessary to use a longer workday than eight hours during the duration of the war, but it does not seem that in consideration of the conditions that more than eight hours should be

exacted in the work that a molder has to perform.

It is the consensus, as President Wilson stated, of students of the subject, that the maximum production is to be had by the adoption of the eight-hour day; and that the preservation of the health and the lives of the employes will be promoted by that limitation.

The employers have, as a rule, patriotically given full aid to the prosecution of the war by placing their splendid plants and their highly skilled chiefs at the service of the Government. The employes, as a rule, have also, with the same patriotism, yielded the eight-hour limitation wherever it has been necessary to speed up production for the Government. The former have received great increase in profit. The latter have contributed an increase in the hours of labor, and vast numbers of men to fill our armies. The former have received from the Government; the latter have given to it. They should not be asked to do so, beyond the necessity of the occasion.

The "Census of Manufactures" for 1914, page 482, shows more than 7,000,000 industrial employes, of whom not more than 12 per cent. were under the eight-hour day. This number has since been increased considerably, but not as rapidly as would have been the case, but for the emergency of the war. Statistics also show that while Australia and New Zealand have frankly adopted the eight-hour day limit in all their industries, in this country the average is still above that figure. This is largely due to the fact that in the southern mill industry the limit is still sixty hours per week and in the northern mills fifty-four hours.

This, however, is no reason why more than eight hours should be required of the molders, whose trade exacts greater fatigue and exposure to noxious and dangerous fumes.

That the country has not yet reached the eight-hour day in all cases is no reason why in this case it should not be upheld. Indeed it may be well considered that as the world, and especially all free countries, are "on their way" to the adoption of the eight-hour law, might it not be for the interests of the employers frankly to accept it, and avoid the constant struggle for its attainment by settling the question, once for all?

When industries were on a small scale and the employer and the employe worked together, face to face, the fellow-servant doctrine was created by the courts which exempted the employer from liability for injury inflicted upon an employe by the negligence of his fellow-servant, upon the ground that the servant contracted with a knowledge of the character of his co-employes. This became absurd when there were thousands of employes engaged in the same employment, but it has required statute after statute to change the judge-made law which had exempted the employer.

In like manner, until very recently, and until changed by statute, the courts held that if an employe contributed in any degree by his own negligence to the injuries he sustained, he could not recover. For this there has now been substituted by an enlightened statute the provision that the damage shall be apportioned, and that the business shall bear part at least of the loss and the crippled employe shall not bear it all, or his destitute wife and children, in case of his death. For the same reason an employe, one of many thousands, is unable to contract on equal terms, either as to hours of labor, or rate of wages of laborers were fixed by officers ap- of vast numbers of men. The law must step in and require protection in these particulars of its citizens against injury to their health, or shortening of their lives by the fatigue of excessive hours, inadequate wages, and lack of sanitary provisions.

By the introduction of machinery and numerous inventions, production has been increased many fold, in some cases a thousand fold. It is not just that the profit accruing therefrom shall go to the employers alone, without the employes receiving a fair share of the vastly increased profits.

In Pressly vs. Yarn Mill, 138 N. C., 424, it was said by this writer: "The law is not fossilized. It is a growth. It grows more just with the growing humanity of the age, and broadens 'with the process of the suns.' . . . Labor is the basis of civilization. Let it withhold its hand, and the forests return and grass grows in the silent streets. Not so long since, in England, labor unions were indictable as conspiracies. The wages of laborers weer fixed by officers appointed by capital, and it was indictable for a laborer to ask or receive more. There was no requirement that employers should furnish safe appliances, no limitations as to hours of labor, no age limit. With the era of more just legislation in this country and England, and elsewhere, shortening the hours of labor, forbidding child labor, requiring sanitary provisions, and safe appliances, labor has been encouraged, and the progress of the world in a few years has more than equaled that of all the centuries that are dead. Justice to the laborer has been to the profit of the employer. The courts should not be less just than the laws."

While an eight-hour day is stipulated for in paragraph 1 of the agreement, there are emergencies likely to occur when for a brief period that limit may be exceeded. But the protection of the eight-hour day will amount to nothing if it rests with the employer alone to declare the emergency. The 50 per cent. allowed for overtime is too small a penalty in view of great profits that may arise. It is true that what is "an emergency" can be and has been defined. Still it rests with the employer to declare that the facts place the demand within the definition of an emergency. Such emergencies can ordinarily be met by the adoption of the three-shift system or an increase in machinery. It is better that the machinery should be worn out than the bodies of the employes. Man passes through this world but once, and he is entitled in the language of the great Declaration to some "enjoyment of life, liberty, and the pursuit of happiness."

It has been suggested, as some protection against the abuse of constantly exceeding the limitation of hours by the employer declaring in his judgment "an emergency" to exist, that such extra days should be limited to three days in the week. This would only be a very partial remedy, for if the employe is overworked three days in the week his product will not only fall off during those days, but also during the remaining days of the week. A better plan would seem to be a provision that the employer shall appoint a standing committee of two, and the employes a similar committee of two, and as the burden of establishing an emergency is upon those who assert it, the eight-hour limitation should not be exceeded unless at least three members of the joint committee of four agree that there is an emergency justifying working overtime. This would avoid also the objection that if there was only one member of the committee on each side, factious opposition by the representative of labor might prevent operation even when there was an emergency requiring it.

For these reasons the following is

THE AWARD.

The molders employed by the Wheeling Molding & Foundry Co., at Wheeling, W. Virginia, shall not be required or permitted to work more than eight hours within any day of twenty-four hours, except in cases of emergency, and then under the following terms and conditions:

1. Overtime work shall be paid for at the rate of time and one-half for all hours worked in excess of eight hours, with double time for Sundays and holidays.

2. The question whether or not an emergency exists, together with the length of time over which such emergency may extend, and the number of extra hours per day, shall be determined by agreement between the management and the working molders in the shop.

3. For the purpose of effectuating the agreement mentioned in paragraph 2, a permanent committee of four persons is hereby created, two of whom shall be designated by the management of the plant and two by the working molders in the shop, the assent of at least three of whom shall be necessary for permission to work more than eight hours in any day of twenty-four hours.

4. **Interpretation of Award.** For the purpose of securing a proper interpretation of this award, the Secretary of the National War Labor Board shall appoint an examiner, who shall hear any difference arising in respect to the award between the parties and promptly render his decision, from which an appeal may be taken by either party to the National War Labor Board. Pending such appeal, the decision of the examiner shall be binding.

WALTER CLARK, Umpire.

September 16, 1918.

U. S. LOANS TO FARMERS.

During the month of June, $8,343,420 was lent to farmers of the United States by the Federal land banks. The Federal land bank of Spokane leads in amount of loans closed, $1,262,800.

During June 1196 applications were received asking for $5,127,011, and 2516 loans were approved, amounting to $6,793,527.

On July 1 the total amount of mortgage loans placed since the establishment of the Federal land banks was $109,517,308, covering 48,297 loans, distributed as follows:

Spokane	$17,000,555
St. Paul	16,205,000
Omaha	13,264,140
Wichita	12,292,700
Houston	9,807,741
New Orleans	7,646,540
Louisville	6,704,106
Berkeley	6,698,400
St. Louis	7,172,172
Columbia	4,746,513
Baltimore	4,140,500
Springfield	3,851,595

FREE SPEECH.

Right down the ages the Ruling Class has opposed freedom of discussion among the workers. "Down with discussion" has been the number One plank in the platform of every autocrat and despot since humans have been able to talk and write.

The plutes of Egypt, Babylon, Greece, and Rome prevented discussion among the slaves, without respect to either creed or color. Early Christianity saw men crucified or stoned to death because, in the opinion of the Ruling Class of that time, they talked overmuch with their fellow men.

The barons and overlords of the Feudal Age knew the danger of free speech, and made bonfires with the bodies of their victims as a method of enjoining silence. And the Ruling Class of to-day seeks to prevent the mass of the people from enjoying the full freedom of speech, of press, and assemblage.

WHY?

Why does the Ruling Class object to freedom of speech among the workers? Why does a free press bring the cold sweat of terror to the brows of the autocrats? Why does free assemblage strike fear into the hearts of the despots? What have they to fear?

Is it that by free discussion the workers may discuss wrongs and seek to right them? Is it that freedom of discussion will clear the air of doubts, lies, humbug, cant and hypocrisy, and explode the false teachings of the Cunning Few? Is it that with freedom of discussion the despots scent disaster waiting for them around the corner?

If the Ruling Class—the despots and autocrats, and those who safeguard their vested interests—have a righteous and holy cause to pursue in life, what have they to fear? For isn't it the simplest of logic that those who are in the right have all to gain and nothing to lose by freedom of discussion?

But by the same inexorable logic those who are in the wrong have everything to lose and nothing to win by freedom of discussion. The Cunning Few know the danger of free speech, a free press, and free assemblage only too well. They know that, possessing these rights, the leaders of the proletariat can dry up the swamps of ignorance in the minds of the workers, and force Despotism, Capitalism, and False Patriotism to stand naked for the damnable and rotten trinity it is—to be destroyed as soon as it has been distinctly visualized by the unfortunate class it has so pitilessly bled and ruined.

The Master Class, and the political sycophants who do its work, know that with freedom of discussion the brains of the workers are no longer fogged, allowing them to see clearly what stands between them and complete freedom.

It is not without reason, indeed, that the iron fist of Despotism is ever ready to bruise the lips and stultify the mind of Democracy.—The Australian Worker.

"The rights and interests of the laboring man will be protected and cared for, not by labor agitators, but by the Christian men to whom God, in His infinite wisdom, has given control of the property interests of the country."—George M. Baer, mine-owner, during the coal strike of 1912.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

The Cause of Anti-Mexican Feeling.

Ill feeling between Americans and Mexicans along the lower Rio Grande River is kept alive by "pistol toters," Texas Rangers, and other civilian officers who have been permitted to act as trial judge, jurors, and executors. Ninety per cent. of the Americans do not appear to understand and do not seem to care to learn the customs or to respect the ideals of the Mexicans.

The above epitomizes an investigation of border conditions by Emilio C. Forto of Brownsville, Texas, at the request of Colonel H. J. Slocum, commanding American forces on the border. Mr. Forto is an American citizen, speaks Spanish, and has lived in Brownsville for fifty years. He has held the offices of sheriff, county judge, and secretary of the school board of trustees.

"The border Mexican," he says, "is a peace-loving, law-abiding and pleasure-seeking individual. He seeks no one's injury. As a rule he is kindly disposed and ever willing to share his half a loaf with the most abject stranger. Womanhood feels safe in his presence, and the horrible stories of criminal assault so common elsewhere in the United States have no place here. A girl may go about the streets of Brownsville or along the public highways at midnight and feel safe. And since the days of 1860 to 1865, when war was the rule of the day, the number of murders committed here has been 75 per cent. less proportionately than in Dallas, Texas, or other large cities. But in a community 75 per cent. Mexican, there is naturally a tendency to cling to Mexican ideals, customs and manners. Here is where the lack of sympathetic understanding figures.

"Ninety per cent. of the Americans do not appear to understand and do not seem to care to learn the customs or to respect the ideals of the Mexicans.

"The border Mexican as a rule is illiterate and consequently not well informed as to hygienic and sanitary requisites. Twenty-five per cent. of the newcomers usually look upon the Mexican as a filthy, unsanitary and sickly makeshift. They can not, and generally will not, assimilate him. Therefore everything relative to the Mexican and his habits becomes repulsive to the American who has been fed on anti-germ theories for a lifetime. I do not mean this as a comparison, nor do I mean to belittle the American for his beliefs. I merely refer to it as one of the obstacles to fraternal progress and the consequent uplift of a peace-loving people. I would not have the American change his belief, but would wish that he might not condemn the Mexican because the latter has not been educated in the same belief.

"It is an unquestionable fact that the undisciplined Ranger force is responsible for the enmity and friction existing between Mexicans and Americans while they (the Mexicans) have great regard for and maintain friendly relations with the United States soldiers, whom they consider their protectors.

"During the so-called Mexican bandit raids many lives of good Mexicans were sacrificed by Rangers and other civil officers, and the more ignorant and illiterate Mexicans were induced to become revengeful against Americans, and as a matter of fact the soldiers received the brunt of their antagonism and attack while looking after the Rangers.

"It would require a lengthy discourse to place before you the real happenings of the alleged bandit raids in 1915, what brought them about, etc. Suffice to say, they were stimulated by the killing of two brothers from Mercedes on or about July 24, 1915; the lynching of a boy named Munoz at San Benito about the same time; the indiscriminate killing of a father and two sons named Flores in the presence of the wife and mother of ten other surviving children at the Arroyo Colorado, without any provocation whatever, and many others whose names could be secured. The number of victims thus sacrificed by such peace officers assuming the powers of a court of justice will probably never be known, though I understand that Attorney F. C. Pierce holds a list with names of nearly 300.

"From all reports (some from army officers whose testimony is probably available) a campaign of extermination seemed to have begun in those days. The cry was often heard, 'We have to make this a white man's country!' It would not be difficult to establish the fact that many well-to-do natives of Texas, of Mexican origin, were driven away by Rangers, who told them 'If you are found here in the next five days you will be dead.' They were in this way forced to abandon their property, which they sold at almost any price."

Bethlehem Steel Co. Dodges Labor Award

Eugene C. Grace, chairman of the Bethlehem Steel Corporation, has been directed by the National War Labor Board to apply its award of last July, which was to become effective August 1. Because the corporation has dodged the award a delegation of machinists and other trade unionists visited Washington and acquainted the War Labor Board with conditions in Bethlehem. The board cited Mr. Grace, who assured the board that the award would be applied. The steel magnate suggested, in effect, that while his concern could hardly be classed as poverty stricken, stockholders would appreciate higher prices since the Government has insisted on a living wage. Mr. Grace was informed that this is a matter beyond the control of the board.

The award orders the corporation to pay rates equal to those paid by the Government in its arsenals and navy yards. Collective bargaining is also ordered, and the corporation is instructed to select representatives to meet an equal number of employes' representatives to adjust disputes. The board assigned an official to see that this award was complied with.

Archibald Johnson, first vice-president of the Bethlehem Steel Corporation, is mayor

World's Workers

Recent issues of the Union of South Africa Government Gazette have contained tables showing the retail prices of foodstuffs and other household necessaries (candles, coal, paraffin, soap, clothing) ruling at nine principal centers in the Union of South Africa, and the rise as compared with pre-war prices. The latest data available relate to the month of April. By taking as a standard the estimated expenditure upon the various articles by a family of five persons, it is calculated that the cost of the fixed quantity of food, etc., at the prices prevailing in Capetown in that month was 42.7 per cent. higher than before the war.

Canadian methods of caring for returned soldiers who must be trained to new jobs are superior to those adopted by most of the allied nations, according to representatives of the Department of Soldiers' Civil Re-establishment, who recently attended a conference in London on the after-care of disabled men. Features of the Canadian system which are not found among those in vogue in Europe are the following: Every soldier is interviewed before his discharge with a view to ascertaining his needs; Canada has national and single control of the agencies for the soldiers' training; responsible paid officials direct the work; returned officers and men are used as instructors where possible; occupational therapy is carried on in all military hospitals; long and efficient courses are given to prepare for permanent occupations; employment is found for trained men.

In its Final Report on the "Health of Munition Workers," issued by the Ministry of Munitions of Great Britain, it is stated that up to the present there has been no marked breakdown in the health of women, and valuable preventive suggestions are given. The report says: "It is probable, however, that the strain has been greater than is at present apparent, having been hitherto counteracted and disguised by certain factors, such as improved food and better factory environment, welfare supervision, and the dropping out of the physically weaker. The committee consider that certain conditions of employment are essential if the risk of future breakdown is to be avoided, including short hours of work conveniently arranged, medical supervision (including rest rooms, first aid, etc.), careful selection of workers, good food, a favorable factory environment, with sympathetic management and supervision.

London has its housing difficulties, no less than cities in this country, and a project involving an expenditure of £3,500,000 ($17,500,000) has been suggested as a means of solving the problem. The London housing program is to provide for seven years after the conclusion of peace, during which period abnormal conditions are expected to prevail. The appropriation would be expended at the rate of $2,500,000 a year during this period. The policy recommended provides for building new houses on estates ripe for development, and on sites near insanitary and overcrowded areas. Already the London County Council has available 106½ acres, enough to accommodate 17,000 persons, on the basis of two per room. It is expected that opportunities will develop for the acquisition of other sites in suitable localities. The committee also plans to raze insanitary dwellings and to replace them with more approved structures.

Pacific Coast Marine.

The boilers of the former steamer "Bear" are still at Eureka, awaiting transportation to China.

Survey of the Shipping Board steamer "Bloomington," launched two months ago from the Hammond shipyards at Eureka, has been completed and the vessel will be in active service soon.

The "Gamma," third ship launched by the Peninsula Shipbuilding Company of Portland, Ore., has ben completed and will be given inspection within a few days. The "Gamma" will be the first ship to be delivered by the Peninsula company.

Fifty-one Scotch marine boilers, worth $1,120,000, are to be constructed by the Willamette Iron and Steel Works. The G. M. Standifer Construction Corporation will receive fifteen of the boilers for five freighters of 9500-ton type for the Emergency Fleet Corporation.

Captain W. H. Logan, representing the London Salvage Association and recently in charge of the salvage operations incident to the stranding of the steamship "Canada Maru," is on a visit to Seattle, but declined to say whether he was here in connection with the libeling of the Japanese liner by the salvors.

To relieve the stress of work that has accumulated in the office of the United States steam vessel inspection service, J. A. Moody of South Carolina, has arrived in Portland to act as assistant inspector of boilers. Traveling Inspector J. J. Meany has been requisitioned as assistant inspector of hulls in the emergency.

Camouflage for wooden ships is no longer necessary, according to orders received by the Emergency Fleet Corporation. It is believed this means that wooden ships—for the present, at least—will not be sent into the war zone. The "Astoria," the first ship launched by the McEachern Shipbuilding Company at Astoria, has been delivered to the Shipping Board, for charter to the Sudden-Christensen Company for operation.

The newly-built wooden steamers "Annette Rolph," "Joan of Arc" and "Georgina Rolph" are to be changed to coal burners immediately, according to Captain N. P. Carlson, who has charge of all Rolph ships after they are launched. The fleet will be placed in operation between a Pacific port and one of the South Pacific where only coal can be purchased for fuel. The vessels have a carrying capacity of about 3000 tons each.

Captain John F. Blain, district manager, and Captain W. A. Magee, assistant in charge of wooden ship construction for the United States Shipping Board, at Seattle, have made a thorough inspection of the record ship "Aberdeen," a 4000-ton wood ship built at Aberdeen, Wash. They pronounced the ship a marvel in view of the speed with which she was built, it having required only twenty-three and one-half days from keel laying to commission. The Shipping Board officials and the Lloyd's surveyors agreed in pronouncing the vessel a perfect ship.

Captain John F. Blain, of Seattle, recently named as district manager of the United States Shipping Board, announced that Captain W. A. McGee would have charge of the wood ship construction of this district, vice William Piggot, resigned. Coupled with the announcement also came the news that J. C. Ford, former president of the Pacific Steamship Company and recently assistant to William Piggot, has also resigned. The resignation of L. E. Geary, naval architect, was also accepted, and the wood and steel drafting departments will hereafter be combined.

There will be sufficient coal for bunkering and also for domestic purposes this winter, according to James B. Smith, president of the King Coal Company, who returned to San Francisco from Utah during the week. Smith went to the neighboring State to investigate the coal conditions, and found that the present supply of more than 2000 tons sent to the port of San Francisco each day will be continued and that arrangements have been made to increase this amount. In the event of more than the present supply of coal being needed for ship bunkering, the output may be increased, as arrangements have been made to get the necessary increase of labor at the mines.

Frederick M. Dickie, son of the late George W. Dickie, editor of the Pacific Marine Review and known throughout the Pacific Coast and maritime circles, is dead. Dickie succumbed after an operation for appendicitis. He was supposed to be out of danger when blood poisoning set in, and the writer of many an interesting log of ships and things pertaining to ships passed away. Dickie was 36 years old and was associated with the maritime interests of the Pacific Coast since he was a boy. His father was one of the most gifted naval constructors in the country and was noted, among other things, as the designer and builder of the famous battleship "Oregon."

The use of the reduction gearing between a Diesel engine and a propeller has been demonstrated by the motor-ship Libby-Maine of the Libby, McNeil & Libby Co. to be a great success. This vessel was fitted some time ago with two 320-brake horse-power Diesel engines of the Dow type, with reduction gearing, the ratio being 2½ to 1. These engines pulled about 340 horsepower on the test stand. On the sea trials of the vessel indicator cards were taken daily and the speed of the vessel corresponded exactly with that of a steam-driven ship. In this connection it is interesting to note that the present successful Danish motor-ships are equipped with Diesel engines of 15 per cent. more power than is used in a steamer of similar size in order to make the same speed, and this verifies the fact that the Dow Company has overcome this obstacle by using a reduction gear with a slow propeller speed.

A majority of the young men employed by the steamship concerns of San Francisco as office workers may be denied exemption and sent to the war. All of the heads of the operating concerns have been advised by the Government to prepare lists of the men who are deemed essential to the work of the company, and it is understood that these will be retained. The places of the boys entering the military service will be filled chiefly by women and girls. The first draft took many of the boys from the shipping offices and the result is that there are now hundreds of girls employed in positions that were always occupied by men in the past. There are but a dozen young men left in the offices of the Matson Navigation Company at this time. There were formerly about two dozen. William Roth, vice-president and general manager, said that the new help is doing good work and there is no reason apparent why women will not do satisfactorily.

A battle is to be waged against compulsory pilotage at the next session of the California Legislature, it was reported along the waterfront. It is proposed to do away with the pilots unless an individual owner or operator wishes to avail himself of the service. Several members of the Pilots' Association said that they were prepared to prove how absurd it would be to do away with compulsory pilotage. They said that the worst that can happen is to have a recurrence of what happened when the New York pilotage was done away with, except when the operator wished to employ a pilot. This is the story: When it was no longer obligatory to employ a pilot, many of the steamship companies decided that their own commanders could take their ships into the harbor. Within three weeks a big liner, worth millions, carrying cargo worth many more millions, was completely wrecked. Many lives were lost. That settled the question for New York and in a few weeks the pilots were asked to come back.

Captain Roger Allman and his crew of nineteen men have made their last cruise and have been unofficially listed with the missing, together with the Gulf Mail Steamship Company's steamer "San Gabriel." There is still a possibility that the vessel may be drifting about helplessly on the Pacific, hundreds of miles off the coast of Lower California, but the officials of the Gulf Mail company, insurance men and shipping men in general believe the vessel and crew were lost three weeks ago when the series of terrific "cordonazos" swept the coast of Mexico and destroyed the steamers "Coos Bay" and "Blackford." The missing men are Captain Allman; first officer, C. Anderson; second officer, John Rosdahl; chief engineer, Otto Fallstrom; assistant engineers, J. H. Johnson and A. Malmstedt; purser, Frank Moffet; seamen, Victor Rozoda, Adam Abalin and F. Werford; winchmen, Nils Johansen and Franz Wilhelm; firemen, O. M. Olsen, J. Elberdin and H. Andreassen; galleyman, F. Montero, and mess boy, John Azo. It is believed that the vessel was struck by the terrific blow just before rounding Cape San Lucas, and the steamer turned turtle and drifted to sea away from the path of travel. The cargo of lumber on deck would have kept the vessel afloat, it is believed. The "San Gabriel" was built in Alameda in 1903 at the United Engineering Works, was 158 feet in length, 33½ feet beam, 11 feet depth of hold and would carry 1,100 measurement tons.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

Headquarters of the Sailors' Union of the Pacific, 59 Clay Street, San Francisco.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, OCTOBER 16, 1918.

THE PRESIDENT'S MESSAGE.

Resolved, By the Sailors' Union of the Pacific in regular meeting assembled at headquarters, San Francisco, California, on October 14, that we extend our sincere appreciation and earnest thanks to President Woodrow Wilson for his timely and expressive message just issued to men ashore with sea experience; further

Resolved, That we fully concur in every wish and desire as set forth in said message, but respectfully submit that the employment of Chinese on American ships and the maintenance of so-called Kalashi watches are not conducive to the creation of an all-American personnel; further

Resolved, That we earnestly appeal to the President to take such steps as may be necessary to stop the further employment of Orientals on American ships and put an end to the Kalashi watch system, which is in direct contrast to the section of the law providing for watch and watch and practically destroys the opportunity to properly teach seamanship to the thousands of young men now preparing for a lifework at sea; further

Resolved, That a copy of this resolution be forwarded to the President and to Chairman Hurley of the U. S. Shipipng Board.

The foregoing resolution, unanimously adopted at last Monday's regular meeting of the Sailors' Union of the Pacific, speaks for itself.

No one who has read President Wilson's message to seamen, published in full on the first page of last week's issue, can even for a moment entertain a doubt upon his genuine and practical sympathy with all the trials and tribulations of America's seafaring population.

No citizen of our Republic has a keener understanding nor a livelier appreciation of the merchant seamen's real worth to the Nation. It was not a passing reflection which prompted the President to issue that memorable message. It was his deep knowledge and his study of men and measures which caused him to declare publicly that "no more honorable or serviceable task can come to any of our people than that of manning our merchant marine."

In every sense the President's message to "all on land and sea who have followed a seafaring life" is a timely as well as an inspiring document. The organized seamen of America will accept it in the fullest meaning. They will do all the President asks—as far as the shipowners will permit. But the President, when he has had time to analyze the situation, will understand and appreciate that a continuance of Chinese competition and Kalashi watches will render null and void every effort to gain the desired result.

The young men who are now being trained for a career of usefulness in the American merchant marine will not stick unless these conditions are changed.

Real respect and affection for the calling can not be instilled into the mind of thinking men as long as part of our proud fleet of merchant ships is manned by Orientals. Nor can there be proper all-around co-operation, much less a proper teaching of seamanship to the young native mariners, unless all crews get back to real practical sea watches. In the long run any other course will spell disaster to an American-manned merchant marine. All of which is earnestly and respectfully submitted to the great man of heavy responsibilities who guides the destiny of our Nation and commands the respect and admiration of all true Americans.

SPANISH INFLUENZA.

The Surgeon-General of the United States Public Health Service has just issued a publication dealing with Spanish Influenza, which contains all known available information regarding this disease. Simple methods relative to its prevention, manner of spread, and care of patients, are also given. Readers may obtain copies of this pamphlet free of charge by writing to the Surgeon-General, United States Public Health Service, Washington, D. C.

It is encouraging to note in this connection that the twelve training ships of the Shipping Board, with nearly 6000 Merchant Marine apprentices aboard, have been entirely freed of Spanish influenza.

Original measures were taken by the Board's medical staff in handling cases on the vessels of the Board's Atlantic training squadron. The ships were anchored at a quarantine station. As rapidly as cases developed they were sent ashore and treated at a field hospital established on a high hill. This is composed of specially designed cubicles, in which one side is glass, and half the roof tips back. Fresh air and sunshine was the basis of treatment that kept fatalities down to a gratifying minimum.

Governor McCall of Massachusetts was so pleased with the results that he congratulated Chairman Hurley of the Shipping Board on the effective work done by the Board's medical staff, characterizing it as "one of the real and big things that has been done in Massachusetts during the war."

Governor McCall's message was as follows:

I want to express my keen appreciation of the very effective work done for the men in your service who were stricken with influenza and who are now being taken care of at Camp William A. Brooks at Corey Hill. I visited the place and was struck with the neatness and the effective way in which all concerned with the care of the men were working. It surely is a splendid thing and I cannot speak in too high terms of it. It is really a revelation as to what can be done. It seems to me as though it is one of the real and big things that has been done in Massachusetts during the war and I want to congratulate all who have had any part in accomplishing it.

The medical authorities of Massachusetts, where Spanish influenza is epidemic, have endorsed the Shipping Board hospital idea and plans are being made for a group of the hospitals in that State, to be paid for out of a fund of $100,000 appropriated by the State to check the epidemic among the civilian population.

Chairman Hurley of the Shipping Board, is on record with the statement that communities wishing blue-prints of the hospital plans could secure them by writing to Mr. Henry Howard at Boston.

THE LAST WORD.

The closing days of this week, furnish the last chance for any American who wants to do his duty in the Fourth Liberty Loan drive.

It is by this time fairly obvious to the most superficial student of the war just why Germany let loose its extremely shrill and entirely insincere plea for an armistice.

Hindenburg and Ludendorff, unable to find new soldiers sufficient to fill the enormous gaps made by Foch's bites all along their front, faced the necessity of shortening that line.

Two years ago, Hindenburg was able to withdraw to the "Hindenburg line" before the Allies discovered what was doing. The movement was therefore free from pressure and cost the Germans practically nothing in men or material.

This year, however, with allied infantry, artillery and tanks right upon his heels along every inch of the line, the German has been forced to retreat, not withdraw, and his retreat has been accomplished by the loss of thousands killed and prisoners and millions of dollars worth of munition and other supplies.

On no front could he shake his pursuers off long enough to make an orderly withdrawal of a single unit.

Hence the peace plea on the forlorn hope that a slackening of Allied pursuit, if not an actual armistice, would give him the few days necessary to straighten out the disorganized tangle into which Foch has thrown his armies.

Fresh triumphs by the Allied troops have shown the Kaiser how clearly Marshal Foch discerned that the German peace plea was a cry for time.

But there is apparent danger that one of the lesser objects of the request for an armistice may be successful. This was the Kaiser's hope that the iminence of peace would cause the American at home to lose his enthusiasm for the support of the American fighting men—that the man who should be buying Liberty Bonds would say:

"Oh well, peace will be declared very soon now. Let somebody else buy Liberty Bonds."

The Kaiser was too farsighted not to know that the actual approach of peace would have that effect—too deep-dyed in treacherous propaganda not to realize that the phantom peace his cry raised would have a similar effect.

The war is not yet won.

The Fourth Liberty Loan must be not only subscribed, but far oversubscribed. Buy Fourth Liberty Bonds, and if you have already bought—buy more.

WAGE ADJUSTMENT BOARDS.

Owing to the refusal of the Railroad Administration and the Shipping Board to abide by the plan of wage standardization which was being developed in Washington, and owing to the still more important refusal of the International Association of Machinists and the Brotherhood of Carpenters to agree, the War Labor Policies Board has virtually been compelled to abandon its standard wage scheme. Now comes the report that the President is to completely reorganize the Policies Board, in the hope of getting results by a new method. At any rate, Secretary of Labor

Wilson, in a letter to Fuel Administrator Garfield, says:

We have built up within a week or so, as the result of the desire of the President to secure more stable conditions in industry, a board the title of which has not yet been decided upon. It is a board that is to be composed of two representatives from each of the wage adjustment boards that have been created by the Federal Government. The purpose of that board is to review the proposed contracts or proposed wage adjustments that may be arrived at by any of the adjustment boards, so that when they are finally announced they will not be of such a character that they will disturb the labor conditions under the jurisdiction of the other boards.

Satisfactory wage adjustment, in the face of a constantly rising cost of living, is certainly a difficult task. But the results so far shown prove that organization and co-ordination can accomplish wonders when there is universal confidence and respect for the head of the Department of Labor. Without that absolute confidence and faith in the two Wilsons—the Chief Executive of the Nation and the Chief of the Department of Labor—America could not possibly have done so well in war work of every description!

PROGRESSIVE SEATTLE.

The most notable victory for municipal ownership in the United States in recent months has just been achieved in Seattle, Washington. By the consummation of a deal which has been going on between the city and the private owners of the traction system of Seattle, known as the Puget Sound Traction Light and Power Company, the city has purchased the entire system, will consolidate it with lines already owned by the city and thus secure complete control through municipal ownership of its entire street car system. This makes Seattle the largest city in America that has secured complete municipal ownership of its street car lines. Other larger cities, notably San Francisco, have municipal street car systems, but not complete ownership as in this case. Here's success to the progressive people of Seattle! A municipally-owned transportation system conducted honestly and efficiently, and solely in the interest of the people, is indeed worth having.

THE "SCARCITY" OF LABOR?

When Louis F. Post, Assistant Secretary of Labor, was in New Orleans, recently, on his way back from a tour of the Pacific Coast, a number of sugar plantation owners came to the U. S. Employment Service office there and protested against the fact that farm laborers were permitted to leave the State to go into war industries.

"What are you willing to pay for farm labor?" they were asked.

"Ninety cents a day," was the reply.

Later on, the Assistant Secretary learned that the sugar plantations are not short-handed, except in cases where these starvation terms were offered to the men.

So, in this case, as in many others it was not a "scarcity" of labor, but a scarcity of "cheap labor."

An epigram attributed to Congressman Gallivan reads: "Rum has more enemies in public and more friends in private than any other substance the world has ever known."

By establishing a minimum wage the trade-union lays a foundation from which all wages rise. Without that bedrock all wages must inevitably sink.

SAVING THE "U"-BOAT'S VICTIMS.

The New Policy of Co-ordination of Salvage Operations Now Carried Out by the Allied Governments.

Is it possible to recover any considerable number of the vessels and cargoes that have been sent to the bottom by the Kaiser's submarines? The fact that a special department of the British Admiralty has been established and equipped for this purpose makes an affirmative answer easy. During the last three years over 400 ships have been recovered by this Salvage Department, according to a writer in the London Times. It should be noted, however, that most of these have been sunk in less than twenty fathoms. Salvage operations, the writer tells us, can hardly be carried on in deeper water than this, and hence the hopes of raising such vessels as the "Lusitania," sunk in deep water, are futile, despite the persistence with which they have been held out by some writers in the lay press. Our quotations from the Times article are from extracts printed in the New York Tribune (July 21). We read:

"Until the autumn of the year 1915 the work of salvage was mainly confined to war-ships, but the magnitude of losses of merchant ships from submarine attacks made it necessary for the Admiralty to extend its salvage operations to merchant ships. The process of expansion is still going on. There are a considerable number of salvage vessels at work in home waters, in the Mediterranean, and on other trade routes where vessels are liable to submarine attacks, while a policy of co-ordination of salvage operations has been carried out with the Allied Governments and a Joint Salvage Council called into existence.

"It can be readily understood that a great deal of salvage work has been carried out under extremely hazardous conditions; yet operations that would not have been attempted in pre-war days have been undertaken, and in the majority of cases carried out successfully with the smallest percentage of loss. Sea conditions are a constant enemy of the Salvage Department. Work which has taken many days to carry out may sometimes be swept away by a single heavy sea. One of the greatest difficulties has, however, arisen from the accumulation of gas in the holds of sunken vessels owing to the decomposition of vegetable and animal matter. Men engaged in the work have sometimes lost their lives. In one particular case four men were overcome by gas. Special trouble has arisen from the gas given off by grain, which develops sulfureted hydrogen, causing partial blindness and violent sickness. It is stated, however, that a discovery which has been made during the war has the effect of rendering these gases innocuous, and it is now possible to carry on the work freely as soon as the presence of the gases has been detected and the rotting cargoes sprayed with the special preparation of which the antidote consists.

"The extent of the work done may be gathered from the statement that from October, 1915, down to the end of May, 1918, a total of 407 ships, most of them of considerable tonnage, have been salved by the Admiralty Department. During the present year nearly 150 ships have passed through the hands of the department, an achievement which is a testimony of the increased efficiency of the work arising from the exploitation of new methods, the larger number of men employed, and as the outcome of experience—not, as might perhaps be imagined, from any increased success of the enemy in the war on merchant shipping. The figures mentioned refer, it should be added, entirely to home waters, and take no account of the excellent results which have attended salvage operations in other seas.

"One or two examples may be quoted of the kind of work which has been undertaken by the salvage department in the lifting of vessels of sizes and weights which until now would have been deemed impossible. It was formerly considered that the limit in weight for lifting from depth was 1600 tons, but this figure has been considerably exceeded with the use of wire ropes during the last three years. A case in point was that of a large Government collier, partly filled, which was sunk by a collision in twelve fathoms of water, blocking a most important channel and anchorage. . . .

"The weight of the ship, including the mud which had accumulated, was calculated at 3500 tons, but it was found possible to reduce this weight to about 2800 tons by emptying the ballast tanks and forepeak. An inspection by divers showed that the vessel had sunk into the mud past the turn of the bilge, and the prospects were not at the outset encouraging. They were further diminished by the fact that another vessel of deep draft coming up the channel had grounded on the upper works of the collier, crushing down all deck erections flush with the deck. After considerable difficulty sixteen 9-inch wire ropes, having a guaranteed breaking strain of 250 tons, were got under the collier and attached to the lifting craft.

"When everything had been prepared the water was emptied from the ballast tanks and the forepeak by compressed air and the first lift successfully accomplished. Calculations showed

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Oct. 14, 1918.

Regular weekly meeting came to order at 7 p. m., Ed. Andersen presiding. Secretary reported shipping good. Full Shipwreck Benefit was awarded to ten members of the crews of the S. S. "Coos Bay" and S. S. "Blackford."

HARRY INGWARDSEN,

DIED.

Severin Carlsen, No. 1627, a native of Norway, age 31. Died at San Francisco, Cal., Oct. 11, 1918.

Nicolai Petersen, No. 1235, a native of Russia, age 33. Died at San Francisco, Cal., Oct. 13, 1918.

A fleet of wooden vessels is being built in the Philippines, according to advices received by the San Francisco Chamber of Commerce. The largest built is an auxiliary schooner of 500 tons net, just launched at Bolinao, Pangasinan. It has three masts and has been christened the "James W. Simmie" in honor of Captain Simmie of this city, whose son, George Simmie, is a member of Simmie & Grilks, ship builders. The vessel will be equipped with a 200 horse-power Bolinder engine. Captain Simmie expects to leave for Manila next week for a short visit. The old veteran was in command of vessels out of this port for twenty-five years.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Far above all other events of the week towers the President's statement of the purpose of the United States to enforce the will of the "workaday people" of the world as the condition of ending this war and preventing future wars.

In his recent New York address President Wilson won the eternal gratitude of the labor movements of America, of Great Britain, of France and of Italy, and must have aroused the hopes of the working class of Japan, when he tore aside the trappings of diplomatic make-believe and pointed his finger straight at the cabinet ministers of Europe. He made himself spokesman of these labor movements when he called upon the ministries of all countries, enemy and entente alike, to come out and say just what are their aims, and whether they agree that the final peace shall do justice to all, and give special advantages to none. He spoke as a man who has heard the thunderous march of organized labor, moving in international solidarity, and who thrills to that music.

The British Trade Union Congress and the French and Italian labor movements have called upon their cabinet ministers, time and again, to define in plain terms what they will demand at the peace conference after the war. Will Premiers Lloyd George and Clemenceau and Orlando follow the unselfish program laid down repeatedly by President Wilson? Will they ask only for justice, or will they join together in brushing aside the program of America as visionary, and proceed to force upon the world a revision of the map and of military arrangements that will quickly breed new wars? Now, when the Allies are winning tremendous victories, when Bulgaria is on her knees, when Turkey seems on the point of giving up, and when the Allied armies are hammering their way through the Hindenburg line from the Channel to the Alps—now is the time that the spirit of selfish nationalistic conquest is most dangerous. And at this time the President of the United States has stepped forward and blocked the path of any possible imperialism.

Does he needlessly offend the clever statesmen of Europe?

Hardly. He is saving some of them from the most terrible mistake of ten centuries. He is not saving the German or the Austrian or the Bulgar or Turk leaders; he lets them go their way to disaster. "Outlaws" he calls the German imperialists. He says truly that the league of nations will let them earn its confidence after the peace is established. But to the statesmen of the entente he points out that the time is ripe for pledges from each of them to the world of the masses. They can refuse to speak—at their peril. If they do not yet know that President Wilson's program of justice for humanity—justice for "those who struggle in the ranks"—is endorsed by the workers of the world, then these statesmen are toying with very dangerous explosives.

"It is the peculiarity of this great war," he says, "that while statesmen have seemed to cast about for definitions of their purposes and have sometimes seemed to shift their ground and their point of view, the thought of the mass of men, whom statesmen are supposed to instruct and lead, has grown more and more unclouded, more and more certain of what it is they are fighting for. National purposes have fallen more and more into the background and the common purpose of enlightened mankind has taken their place.

"The counsels of plain men have become on all hands more simple and straightforward and more unified than the counsels of sophisticated men of affairs, who still retain the impression that they are playing a game of power and playing for high stakes. That is why I have said this is a peoples' war, and not a statesmen's. Statesmen must follow the clarified common thought or be broken."

He does not say that revolution threatens, in any country whose labor movement is pleading for the program he is urging; he merely remarks that statesmen who resist the common people in these days will be "broken."

"I take this to be the significance," he goes on, "of the fact that assemblies and associations of many kinds, made up of plain workaday people, have demanded, almost every time they came together, and are still demanding, that the leaders of their governments declare to them plainly what it is—exactly what it is—that they were seeking in this war, and what they think the items in the final settlement should be. They are not yet satisfied with what they have been told."

Is he speaking for the British or the French or the Italian laboring masses? In any case he speaks for the Allied nations, to the politicians in Europe whose failure to be frank has made those peoples turn to the President of the United States for guidance. He is not disturbing the unity of the Entente; he is all at once molding it into one vast, popular internationality. The echoes of his challenge to these statesmen to be statesmanlike will be heard in every trade union meeting from Scotland to Sicily. There will be a sudden panic among the scheming politicians who had thought of a hucksters' settlement of the war. They will find that they have to reckon with their peoples, and their peoples are all solidly behind this idealist, the President of the United States.

What is the meaning of this challenge to European politics?

Bluntly, it is a prophecy of a Europe of republics.

That is to say, a Europe in which organized labor will finally be the majority power in every parliament, every ministry, every branch of political and industrial control.

* * *

Conferences between labor officials and the Secretary of Labor and heads of all the Government departments, bureaus and boards that deal with labor conditions have been in progress here for the past two weeks, in an attempt to "stabilize" wages. That's an old subject; it has been brought up in various ways ever since we entered the war, and has proven too hard a nut to crack. Beautiful plans are made for setting a fair minimum wage and a reasonable maximum wage for war work of certain kinds, under conditions existing at a given time and place. But before any agreement can be reached the cost of food and of house rent has advanced, and the whole thing is spoiled.

The thing chiefly desired by the Government seems to be a guaranty against extortionate wage demands in any district, and against the payment by one branch of the war organization of so large a wage as to pull men away from other branches. The labor men who have been in the conferences are not confident of a solution. They see a possibility of the fixing of a maximum wage that will be fair enough in most parts of the country but will come too close down to the cost of living in certain sections.

* * *

In Bridgeport, all's well that ends well. The latest from that troubled town is the interpretation given the Eidlitz award on general industrial conditions last Monday by four members of the War Labor Board—Messrs. Taft, Walsh, Savage and Osborne. This "interpretation" gives the union machinists who struck recently and were sent back to work by President Wilson, every point for which they quit the shops.

Nine points are named in the Board's rulings. They provide that the companies shall not interfere in the selection of shop and craft committees; that back pay at the higher rates must be given all employes who came into the shops up to July 1, instead of only to those who were employed before May 1; that the strikers shall have proportionate representation in the industrial convention that was chosen by the non-union workers while the strike was on; that the Examiner for the Board shall immediately investigate charges of discrimination, and shall immediately reinstate employes pending such investigation; that all strikers returning to work at the President's request shall have the right of reinstatement in their old positions; that the Local Board of Mediation and Conciliation after its election shall create specialized craft boards, or other boards to work out such problems as classification and minimum rates of pay.

This last is the meat in the cocoanut. The machinists get a special board to present a classification scale of wages.

* * *

On Monday last, the membership of the International Association of Machinists passed the 275,000 mark. This is a gain of 200,000 in a little over two years. Office mail at the headquarters here is now 24 days behind—so difficult has been the job of getting help and office space to handle the flood of reports and applications. Lodges in every State are rapidly growing, and along with the skilled mechanics the organization is being forced to take in thousands of the new men who have been brought into the war industries with only a very slight knowledge of tools. The old-time machinists who are proud of their manual skill and the traditions of their craft have to choke down many a groan as they witness this dilution of their trade made necessary by the war, but they have no alternative to offer. The Government has given every skilled man the chance to get into the shops. If thousands of them have chosen to carry guns, then thousands of raw mechanics must work at the bench and the lathe. Once there, they come logically into the union.

* * *

John I. Nolan of San Francisco, Congressman and union iron molder, has put through the House, after three years of fighting, his bill giving a minimum wage of 37½ cents an hour, or $3 a day to all hour and day workers under the Government, and $90 a month to all workers paid by the month. Sixty thousand men and women are benefited by this bill, which has a good chance in the Senate.

During the debate Rep. Sabath of Chicago called attention to the fact that Borland of

Kansas City, who tried to force the Government employes to work an additional six hours a week, and to prevent their getting a living wage, was beaten on the labor issue in the recent primary, by a two-to-one vote. Borland himself came to Nolan to ask how he should vote on an amendment to the bill. His head-on collision with the labor movement seems to have impressed Borland, at last. It has impressed the House, too. This time not one of the anti-labor crowd took any of the two hours of time allowed for opponents of the measure.

* * *

Congressman Miller of Duluth, super-patriot and labor-hater, is going to be replaced in the House by a railroad engineer named Carss, nominated by a labor convention. There has just been published in his district a copy of a letter he wrote on the day before our declaration of war, in which Miller said that "I have not believed circumstances have occurred justifying a declaration of war against Germany," and that "if war eventually occurs, Germany should declare it." Also "However, the President has the power and he has now exercised it to commit this country to war immediately."

"CHAOTIC RUSSIA."

It is interesting to note the frequency with which the above phrase is used in reference to Russia and how often it is employed as a final reason for military occupation of that country. The Bolshevik power is less than a year old. It has to contend with a shattered economic system inherited from the Czarist autocracy. Aside from its tremendous economic problems it has had to face numerous plots, conspiracies and rebellions, all of which have collapsed like a house of cards. In addition to this, it has remained an Ishmael among the nations, isolated and friendless, and constantly attacked by international finance and imperialist groups in all parts of the world. Yet it has survived all these difficulties. Never in all history has there been a government that has displayed such vitality in the midst of such internal and external foes.

Our own history may be drawn upon as an illustration. We have just been celebrating the one hundred and forty-second anniversary of the Declaration of Independence, the war cry of American revolutionists against an alien governing control. July 4, 1776, may be assigned as the beginning of the revolution, though it had been fermenting for years before that date. Following it came the Continental Congress, the government of the revolutionary period, which did not surrender its powers until the Congress under the new Constitution met in 1789. Peace did not come with the admission of defeat by Great Britain. In fact, all competent historians admit that chaos followed. Instead of a united thirteen colonies, we had thirteen independent sovereignties working at cross purposes with each other. Not only was there this division between the colonies, but within many of them there were debtors' revolts of poor farmers and workers that threatened to overthrow all the governments of New England. The most formidable of these revolts, Shay's rebellion in Massachusetts, drove the leading men to the Philadelphia convention that framed the Constitution. Even after the assembling of the first Congress, in 1789, another rebellion broke out in Pennsylvania among the farmers of the western counties, and it required a threat of Federal military power to suppress it.

In other words, it required thirteen years for our revolutionists to establish a government that was stable. Like the Russian revolutionists, they had counter-revolutions to contend with, but, unlike the Russians, they had no powers of international finance and imperialist interventionists to meet. There were no organized groups in Canada planning invasion from the north. The United States was isolated by its geographical situation; Russia is isolated by withholding of recognition by other governments. Russia is spewed out as "chaotic" by our bourgeois press because it has not completely accomplished under less favorable conditions what required thirteen years to accomplish in this country.

Another historial analogy may be noticed. The Civil War ended with the surrender of Lee at Appomattox, in April, 1865. Yet every school boy knows that it was at least ten years later that "chaos" gave way to conditions that may be described as orderly. Here, again, there were revolts and riots in the Southern States, but the country remained isolated, with no threatened invasions from any quarter and no international intervention groups to contend with in foreign capitals. It required thirteen years in the one case and ten years in the other to establish orderly processes of civilized life, yet the Russians meet a storm of denunciation because they have not done likewise within less than one year.

Changes like the American revolution, the Civil War and the Russian revolution are not pink tea affairs, as this bourgeois press knows. They require time to heal wounds and to reconstruct society, and time will be required by every nation now at war. Many years will cover the readjustment period, and during this time disturbances will occur. But the Russians are expected to do in a year what has always required a decade or more to do. The future will require it this time, also. It will be no pink tea affair in which social and economic institutions will reassemble in orderly fashion at the command of a swarm of press clowns. What the latter want in Russia, however, is not the order of a strifeless society based upon equality of opportunity and the social welfare of all, but the "order" of bourgeois society that guarantees Russia as an exploiting field for native and foreign finance and capital. The "chaos" of such societies is transformed into a blessing by this press and accepted with pious resignation wherever it prevails, and no historical analogies will avail to divert it from its service to reaction and voicing the views of its wealthy investors.—New York Call.

A "LADY" SKIPPER.

The following story comes to us from the "Woman's Column" of The Worker, published in Brisbane, Queensland, Australia:

"Elise Belluomini, a pretty Italian girl, whose home is at Viareggio, enjoys the honor of being the first regularly appointed captain in her country's merchant marine.

"Her dreams as a child followed the picturesque sailing ships, which she watched from the outpost beside the blue Tyrrhenian Sea, and gradually her musings transformed themselves into a determination to become a sailor. The good folk of Viareggio looked askance at her when she first spoke of her resolution, and the older and more superstitious of the population did not hesitate to declare her possessed by the devil.

"Persisting in her idea, however, Elise gained the ear of a veteran sea captain, through whose intermediary she obtained a recommendation to the naval authorities at Leghorn, and eventually she was allowed to follow the courses at the Nautical College. The girl made astonishingly rapid progress in her studies, mastering easily the most complicated problems of navigation, and she has just obtained her captain's certificate.

"Signorina Belluomini relates her success in a letter to a writer in the Petit Journal, Paris. She is to be appointed to command a ship, and seems to have no doubt of her ability to inspire confidence in her crew. She writes:

"'Where shall I be sent? I do not know, but I am ready for everything. I join the marine in troubled times, and I know seamen risk their lives every day. But I will show my crew that a woman can be as brave as a man.'"

"Observe all men—thyself most."—Benjamin Franklin.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

of Bethlehem, and Edward Davies, for eight years a member of the State Cossacks, is chief of police. These officials, with the aid of other corporation influences, made it impossible for the Machinists' Union to hire a hall for meeting purposes. This developed such an acute situation that the Federal Department of Justice notified the unionists that it would help them to secure a hall.

Workers in Dusty Trades.

In a pamphlet on "Mortality From Respiratory Diseases in Dusty Trades," the Federal Bureau of Labor Statistics estimates that there are 3,264,500 males and 673,478 females working in so-called dusty industries, trades and occupations, which are arranged in seven large groups for the purpose of ready reference.

While it is agreed that the mortality from tuberculosis has gradually declined from an average rate of 32 per 10,000 for large American cities for the five years ending with 1884, to 16.1 per 10,000 for the five years ending with 1914, this reduction has, only to a limited degree, affected the persons most seriously concerned—the workmen and work women employed in dusty trades.

It is estimated that approximately 10 per cent. of the nation's workers are employed under conditions more or less detrimental to health and life on account of atmospheric impurities.

Authorities recognize metallic dust as the most serious health hazard. The term "metallic dust" is applied to particles of iron, steel, brass, gold, silver, bronze, lead, arsenic and other metallic substances. Typical employments with metallic dust exposure are file cutters, coppersmiths, engravers, printers, lithographers, nail makers, machinists, gunsmiths, etc. Persons in all of these employments or industries are subject, as a general rule, to an exceptionally high mortality rate from all causes, and a high specific death rate from pulmonary tuberculosis.

To Adjust Railroad Disputes.

Director General of Railroads McAdoo calls attention to his orders covering adjustment of wage disputes.

"It should be understood by railroad employes," said the Federal official, "that it is impracticable to give interpretation on ex parte statements to the thousands who request information as to the manner in which wage orders should be applied in individual cases. Operating officials of the railroads are required to place wage orders in effect fairly and equitably, and should differences of opinion arise necessitating a formal interpretation, the matter will be disposed of in the following manner:

"When a wage order is placed in effect in a menner with which an employe, or the employe's committee disagrees, a joint statement quoting the language of the wage order, and including the contentions of employes and the contentions of officials, signed by the representatives of the employes and the officials, will be transmitted to the director of labor, who will record and transmit same to the Board of Railroad Wages and Working Conditions, which will promptly investigate and make recommendation to the Director General. Upon the receipt of interpretation from the Director General, the director of labor will transmit such interpretation to the Railway Boards of Adjustment for their information and guidance in the application of such interpretation to existing conditions or to questions arising from the incorporation of the order as so interpreted into existing agreements on all railroads under Federal control. As occasion demands, all interpretations will be printed and given general publicity for the purpose of communicating the information to all concerned, and thus avoiding the necessity of duplication of interpretations."

Army Uses Much Wool.

General Wood, Acting Quartermaster General of the Army, states that for the last fiscal year the Army, Navy and Marine Corps used over 266,000,000 pounds of wool, and 17,500,000 pounds were used for semi-governmental use.

"We get up at the end of each month," he said, "a report showing everything in the states from the factory to the man's back. We have a record of what clothing is in transit from the factory to the depot, what is in transit to the docks, and what is in the holds of the ships going over to France. I assume if the men hadn't been supplied we'd have heard of it. There is no excuse for the Quartermaster Department falling down. The ordnance and air craft had to design—and didn't have the production. They had to build new plants and new factories. With us it was simply the question of turning over the plants from making civilian clothes to uniforms."

In reply to a question regarding grafting raincoat manufacturers the Army official said that these contracts have been annulled and the material confiscated.

"It slowed up production some—lost us a month in production," he said, "but it is better to have no raincoats at all than defective ones."

Liberty Loan Statistics.

The Treasury Department has issued a table showing results of the third Liberty Loan subscriptions according to the twelve Reserve Bank Districts, which cover the entire country. These districts were assigned a certain quota of the $3,000,000,000 issue, which was oversubscribed $1,158,599,100. This is exclusive of treasury subscriptions which total $17,917,750. Every district oversubscribed its quota, the Minneapolis district leading with 172 per cent. New York was lowest with 123.91 per cent.

Based on an estimated population of 103,620,273 in the United States, 17.7 per cent. of the entire population subscribed to this loan. The Philadelphia district led with 25.2 per cent., followed by Chicago, with 24.7 per cent.; Minneapolis, 23.6 per cent.; New York, 23.2 per cent.; Boston, 21.7 per cent.; San Francisco, 21.1 per cent.; Kansas City, 16 per cent.; Cleveland, 15.4 per cent.; St. Louis and Dallas, 12.7 per cent.; Richmond, 9.2 per cent.; Atlanta, 5.8 per cent.

FOREST TRAILS IN NORTHWEST.

The United States Forest Service maintains 4350 miles of trail in Oregon and 4500 miles in Washington for fire protective purposes.

SAVING THE "U"-BOAT'S VICTIMS.

(Continued from Page 7.)

that the load lifted was 2750 tons, and the four lifting vessels engaged in the work carried the ship a distance of over one mile inshore, clear of the anchorage. As a result of further lifting operations the vessel was gradually moved until her decks were almost dry at low water. The final stage of the work was to send divers down to patch the damage roughly and to pump out the water and float the vessel."

Another vessel recovered had been torpedoed while carrying a cargo, mainly of foodstuffs, valued at £3,000,000. An attempt to beach her was only partly successful, and at low water the shelter deck was just awash. It was decided to use submersible motor-pumps, which can be lowered from the decks of the salvage steamer to any position under water and worked by electricity. Says the writer:

"The damage in this particular instance was of somewhat extensive character, the plating having been destroyed over an area forty feet long by twenty-eight feet deep. Measures were taken to drain off the water from some of the holds into the stoke-hold and engine-room, and the forward 'tween-deck hatches having been closed up and made watertight, the motor-pumps were placed in the stoke-hold and set to work.

"It was then possible to pump out the stoke-hold, engine-room, and some of the after-holds. A considerable quantity of cargo was next discharged and pumping operations were put in hand in the forward shelter-deck. This still left the lower holds full of water, but the ship had been lightened to an extent which enabled her to be put into a better position on the beach, and some thousands of tons of cargo having been discharged, she was floated off and put into dry-dock.

"The Admiralty Salvage Department is not only responsible for war-salvage, but controls the operations of all private companies, and, in association with shipping insurance interests and Lloyd's, undertakes the work arising out of marine casualties in all parts of the world. Ship-salvage methods may not have been revolutionized, but they have been developed to a higher degree of efficiency than was considered possible even by those engaged in the business."

VICTOR HUGO ON THE MOB.

"Foex urbis," Cicero exclaimed; mob, Burke adds indignantly; a crowd, a multitude, a population, these words are quickly uttered; but no matter! What do I care that they go barefoot? They cannot read; all the worse. Will you abandon them on that account? Will you convert their distress into a curse? Cannot light penetrate these masses? Let us revert to that cry of light and insist upon it. Light, light! Who knows whether this opaqueness may not become transparent, for are not revolutions themselves transfigurations? Come, philosophers, teach, enlighten, illumine, think aloud, speak aloud, run joyfully into the sunshine, fraternize with the public places, announce the glad tidings, spread pamphlets around, proclaim the right, sing the Marseillaise, sow enthusiasm, and pluck green branches from the oaks! Make a whirlwind of the idea! This crowd may be sublimated, so let us learn how to make use of that vast conflagration of principles and virtues which crackles and bursts into flame at certain hours. These bare feet, these naked arms, these rags, this ignorance, this abjectness, this darkness may be employed for the conquest of the ideal. Look through the people and you will perceive the truth; the vile sand which you trample underfoot, when cast into the furnace and melted, will become splendid crystal, and, by its aid, Galileo and Newton discover planets.

The "London Daily Mail" has renewed the offer of $50,000 to the first person who will fly across the Atlantic Ocean from any point in the United States, Canada, or Newfoundland to Great Britain or Ireland, or vice versa, in seventy-two consecutive hours. This offer was made in 1913, but was suspended on account of the war.

PREHISTORIC ASTRONOMY.

For many years two pairs of holes in the walls of the celebrated prehistoric Casa Grande Ruin in Arizona have given rise to much speculation not only on the part of tourists but of archaeologists also. The holes are about an inch and a half in diameter and are bored through walls four feet thick. They occur in pairs, each pair on opposite sides of a great central room. The holes in each pair are in line with each other, so that one standing in a dark first floor room behind the central room may look through the innermost hole, across the central room, and through the outermost hole at the sky. One pair points due east. The other pair points north at a declining angle.

The interesting people who built this most ancient of pueblos have left no traces behind them. One can only imagine, by analogy from better known neighborhood races of a later period, what their civilization may have been. That they were a deeply religious people and worshipers of the sun is an assumption. Recently an interesting theory has been advanced to explain the holes.

According to this theory these holes form what might be called a seasonal clock. Twice a year, once as the sun works north and once as it works south along the eastern horizon, it rises in line with the eastward pointing holes and for one morning, for possibly three minutes, throws a bar of light into the dark inner room.

From this the ceremonial calendar could be dated and certain festivals would fall on the same day year after year. One is reminded of Stonehenge in England where the sun at its summer solstice shone down a long alley of stone monuments upon an altar placed in the center of a series of circles of stones.

We come now to the northern pair of holes which are placed in the north wall of the central room and the corresponding outer wall of the building. This pair trends downward and to the east so that they never overlooked the defensive wall which surrounded the group of buildings around the Casa Grande. At first thought this precludes any astronomical use, but the ingenious theorist has an explanation for even this condition of affairs.

If we grant the former inhabitants the use of an instrument of reflection, which need be no more complicated than a plain bowl of water, then it is easy to imagine the medicine man in the dark of the night, when he comes to a certain point in his ceremony, putting a bowl of water at a predetermined point on the plaza outside and so reflecting the light of some bright star in the northern heavens up through these holes into the central room of the Casa Grande.

The problem is now being studied as to which bright star near that particular angle could have been moved from that exact angle by the precession of the equinoxes, and it is hoped by this point to establish the date when the Casa Grande was inhabited.

How long ago this was is uncertain, moderate guesses beginning with 600 years and more radical guesses going to 1000 or more years.

The Casa Grande itself, however, ancient though it is, was the most recent of its group. The evidence seems to show that an older group of ruins was abandoned about the time the Casa Grande was built.

NORWAY'S CONCRETE SHIPS.

Norway is racing with America to see which country will gain the honor of building the first concrete vessel that will cross the Atlantic Ocean. America is far in the van of the shipbuilding world in regard to the number of concrete ships and their size that are being constructed at the present time. But Mr. Nick Fougner, president of the Fougner Concrete Shipbuilding Co. (Inc.), Christiania, Norway, states that he hopes to cross the Atlantic on one of the larger boats which his company is building within the next two or three months.

The concrete ship is fast coming to the front in Norway. The shortage of wood and steel in that country has made it necessary for shipbuilders to turn to the concrete vessel in order to offset the losses suffered by the depredations of the U-boats, if they desire to continue both their coastwise and transatlantic trade.

The "Stier," a 1,000-ton concrete vessel, recently built by the shipyards of the Fougner Concrete Shipbuilding Co., is a pioneer of the type of concrete vessel that is now under construction in Norway. The vessel is 145 feet over all, 27 feet 6 inches beam, 15 feet 9 inches molded depth. It is equipped with an internal combustion 320-horse-power motor, and has four watertight transverse bulkheads of concrete, which, with a reasonable cargo, makes the ship practically unsinkable.

At present the Fougner Co. has under contract 12 additional seagoing concrete motor ships, varying in size from 200 to 3,000 tons deadweight, and they have built and launched about 25 floating craft of various types, including tugs, lighters, motor ships, and dry docks.

It is expected that the Norwegian builders will adopt the new protective coating which, when applied to concrete, makes the life of a concrete vessel equal in durability to that of a steel vessel. This discovery, so important in the construction of concrete vessels, has been the result of the research work of the engineers of the Emergency Fleet Corporation.

SULPHUR IN ALASKA.

The known sulphur deposits of Alaska are of volcanic origin and lie in the belt of active volcanoes that extends through the Aleutian Islands and Alaska Peninsula. The deposits on Unalaska and Akun Islands and near Stepovak Bay, on Alaska Peninsula, were examined in the summer of 1917 by A. G. Maddren, of the United States Geological Survey, Department of the Interior. The examinations showed that though there is some sulphur at each place examined there is little hope that any of it can be profitably mined at present or in the near future, for the deposits are of small areal extent and are probably shallow, supplies and labor are not at hand, the open season is short, the difficulties of transporting the material from the mines to ships would be great, and the haul to the larger markets would be long. A brief summary of the more important results of the investigation of these deposits has been published and will be sent on application to the Director of the Geological Survey, Washington, D. C.

Labor News

The fur workers' unions in New York City are voting on the plan to raise a $100,000 defense fund. Officers favor the proposal. They say it will assist in holding recent wage increases.

Reports to the Federal Bureau of Mines from every State except Kentucky show that 192 coal miners were killed in May of this year. In the same month last year there were 148 fatalities.

The Wisconsin State Industrial Commission is holding public hearings on the question of women's wages. Several months ago the State Federation of Labor and other organizations petitioned the commission to establish a living wage for women.

Several wood working plants in Minneapolis have jumped the Citizens' Alliance reservation and signed an eight-hour agreement with the Cabinet Makers' Union. Wages of 50 cents an hour are also agreed to. Other concerns that insist on non-union conditions now see their employes leaving this industry for work that will pay a living wage.

A sub-committee of the National Adjustment Commission, which handles disputes in the loading and unloading of vessels, has ruled that wage rates for four locals of longshoremen in Chicago shall be increased from 65 to 75 cents an hour. The commission that made this award consisted of representatives of the Government, the International Longshoremen's Association and the Lumber Carriers' association.

Postmaster General Burleson has appointed a committee "to investigate the working conditions of and wages paid to employes of the telegraph and telephone companies, and report as to what improvements, if any, should be made in the working conditions, the wages which should be paid the various classes of employes and the feasibility of standardizing the same." The committee consists of William S. Ryan, Assistant Superintendent, Division of Postoffice Service; John B. Colpoys, Special Agent, Department of Labor, and editor of the Washington (D. C.) Trades Unionist; U. N. Bethell, First Vice-President American Telegraph & Telephone Company; F. B. MacKinnon, United States Independent Telephone Association, and Miss Julia S. O'Connor, President Boston Telephone Operators' Union.

In a long statement to Joint Chairmen Walsh and Taft, of the National War Labor Board, President Williams, of the Brooklyn Rapid Transit Company protested against the War Labor Board investigating charges that the company has victimized members of the Brotherhood of Locomotive Engineers. Messrs. Walsh and Taft gave respectful hearing while the statement was being read and then continued their inquiry. President Williams insisted that his company should not be dominated by "outside influences," and that a "union" maintained by the company is entirely satisfactory. One witness testified that an inspector notified him he could choose between the company and the brotherhood, and that within three weeks after he joined the brotherhood he received sixty demerit marks. When an employe receives this number of demerits he is automatically discharged.

Under a rule adopted by the Seattle Postoffice, letters addressed in care of the Sailors' Union Agency at Seattle can not be held longer than 30 days from date of delivery. If members are unable to call or have their mail forwarded during that period, they should notify the Agent to hold mail until arrived.

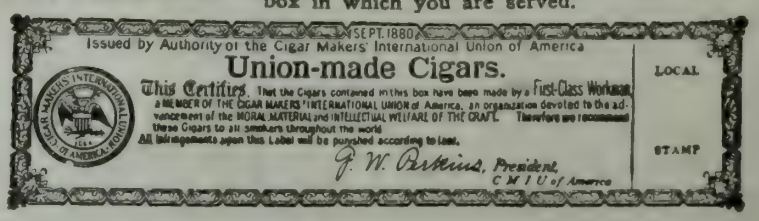
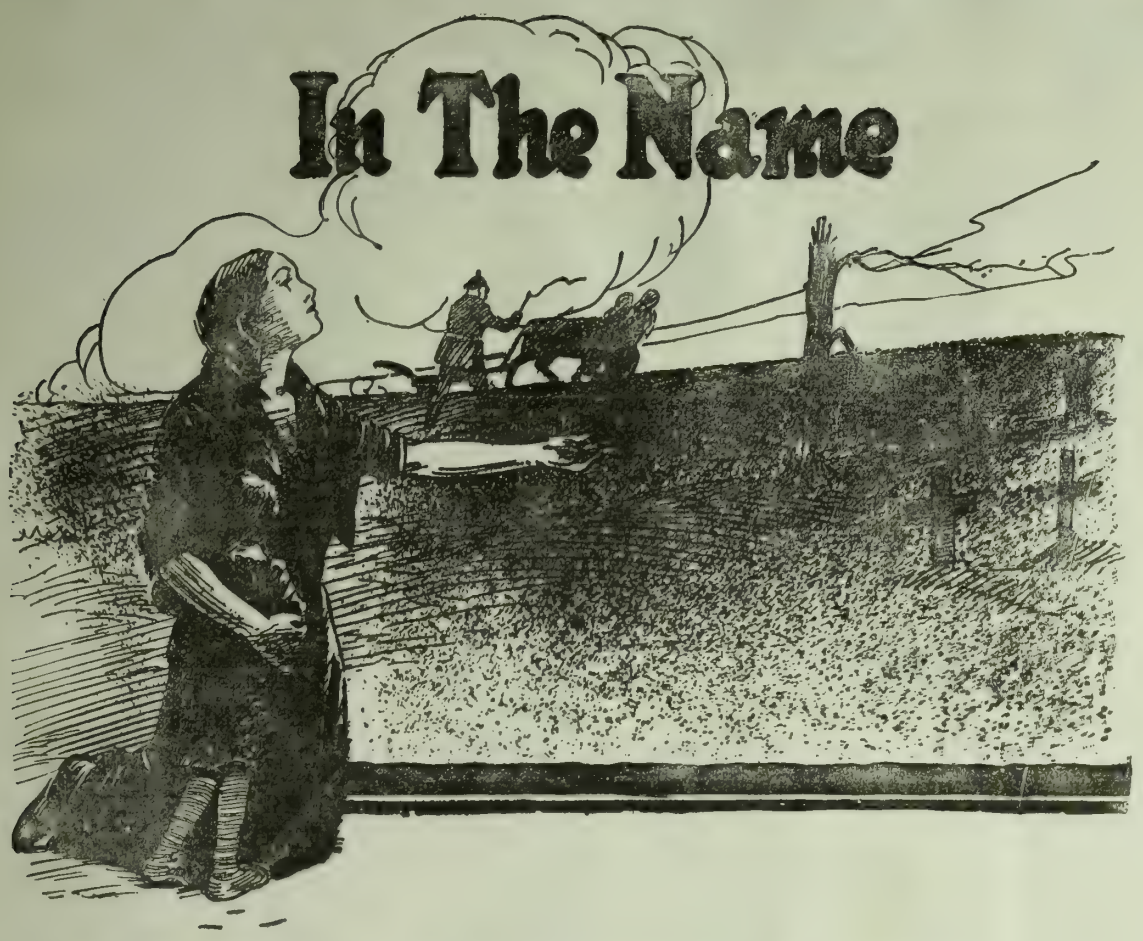
SMOKERS See that this label (in light blue) appears on the box in which you are served.





In the name of the women of Flanders,
Who are ploughing the German fields,
Yoked to the ox and under the lash----
Buy bonds-----lest the country yields.

In the name of the girls and the children--
The Belgian, the Serb, and the French-
You know what a German victory means.
Buy bonds for a stronger trench.

In the name of our murdered seamen,
Of hospitals bombed from the sky,
In the name of Good Friday in Paris,
In the name of Decency---buy!

—LUCY PRICE.

BUY Fourth Liberty Bonds **Any Bank Will Help You**

Home News

It cost $12,000,000 to collect $3,694,703,334 Governmental taxes in the fiscal year ended June 30. This is at the rate of $3.24 per thousand, the lowest cost in the history of the Internal Revenue Bureau.

The hoggishness of the C. A. Goodyear Lumber Company in Washington State is blocking the Government's efforts to secure spruce lumber for the building of air planes, and Uncle Sam has started condemnation proceedings against this concern. The company rejected every reasonable price offered by the Government.

"Returning soldiers should not be compelled to go to distant places to locate while people in their own neighborhoods own large areas of unused land," said Frank P. Walsh, of the National War Labor Board, in an address to charity workers at Washington, D. C. "Persons having more land than they can use," he said, "should be compelled to sell to the Government at a fair price that it may be distributed among the returned soldiers. In this fight for democracy we must make sure that serfdom is not recognized in our own country."

Over 400 educational institutions have accepted the War Department's contract to place facilities at the nation's service for the military and academic training of their students under army control. These students number approximately 150,000. They will receive the pay of a private in the army and will be fed, housed and clothed by the Government. It is arranged to devote eleven hours a week to strictly military subjects, drill and physical training and forty-two hours a week to lectures, recitations and other preparations usually found in a college curriculum.

The United States Railroad Administration asks persons who would submit new railroad devices for the consideration of the administration to observe the following rules: Correspondence relating to locomotives or cars should be addressed to United States Railroad Administration, Frank McManamy, Assistant Director, Division of Operation, Washington. Correspondence relating to roadway and track should be addressed United States Railroad Administration, C. A. Morse, Assistant Director, Division of Operation, Enginering and Maintenance, Washington.

Provost Marshal General Crowder has announced that a drive against slackers in ship yards uncovered 20,000 draft registrants who tried to evade the call to service by obtaining employment with the United States Emergency Fleet Corporation. At Cramp's shipyard in Philadelphia some employes suspended work in disgust because of the antics of these slackers who had secured positions as sub-foremen. Among them were pugilists and ball players who would order skilled ship builders to "go down in the cellar," when they meant the hold of the vessel, and "go up stairs," when they referred to the deck. One worker declared that skilled men are "doing their damnedest" to build ships, but are interfered with by these incompetents. Workers suggest that if there is less discussion about sports and more energy displayed in getting ships into the water the war will end more quickly.

Domestic and Naval

Twenty-four men, comprising the crew of the fishing schooner "Gloaming," of Lunenburg, N. S., have been picked up in dories near St. Pierre, Miq. They reported their vessel sunk by a German submarine.

The Federal Government has chartered the "Mandeville," formerly the "Hanover," from the Louisiana Transport & Ferry Co., for use as a training ship for the merchant marine. The "Mandeville" operated for a number of years on Lake Pontchartrain.

Last year the International Mercantile Marine Company made a profit of 22 per cent. on its preferred stock. Its annual report shows a surplus of $15,475,985, after meeting all fixed charges and operating expenses, including cost of repairs, maintenance and overhauls.

Moises Huerta, the Spanish sculptor, has completed the model for a monument dedicated to the victims of the "Lusitania," which is to be erected on the seashore near Boston. The monument represents the earth drawing from the sea's bed the bodies of the torpedoed vessel's victims.

To better provide for fire protection along the Delaware and Schuylkill River fronts where millions of dollars are being expended in new piers and warehouses, it is proposed to have as many tugs as it is possible equipped with power pumps and hose to assist in fighting fires.

The Delaware Shipbuilding & Repair Co., of Philadelphia, has acquired about twelve acres at Beach and Erie streets, Camden, N. J., adjoining the shipyards of Quigley & Dorp, which will be used for the construction of a shipyard and repair works. It is understood that the plant will be equipped for the production of ocean-going barges of about 2500 tons capacity.

The American Screw Propeller Co., of Philadelphia, designers of screw propellers and propulsive experts, advise that they have designed the propellers for over 450 vessels now building or on contract and that their clientele consists of nearly fifty of the largest American and Canadian shipyards, ten prominent steamship lines, eight naval architectural and engineering concerns, and a number of engine builders.

Shipping Board energies are, it is understood, to be directed toward the object of discovering the cost of vessels building in American shipyards. This program will be formulated at a conference to be held next week by Edward N. Hurley, Charles M. Schwab and Charles Piez. The purpose is to determine the cost of steel, wood and composite ship production and to make a comparison of prices in this country with those of foreign countries.

Shipyards along the Eastern seaboard will be requested gradually to adapt their yards to build one standard type of ship instead of two or more, as at present, says Charles Piez, vice-president and general manager of the Emergency Fleet Corporation. The idea of thus standardizing the work in the shipyards is to speed up production. The Pusey & Jones Co. will probably construct 12,000-ton ships after present contracts are concluded, while the ships at Hog Island will probably all be of the 7500-ton class.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

News from Abroad

A Belfast shipyard has established the world's record by completing a vessel in five days after launching.

A British armed boarding steamer was torpedoed and sunk by a German submarine on September 12, the British Admiralty announced. Fifty-eight members of the crew are missing.

A Budapest report to the Jewish Correspondence Bureau states that Jews in Galicia have been systematically rounded up and robbed, under the pretense of special taxation, and expelled from the country.

The disastrous Grey nunnery fire at Montreal on February 14 last, in which sixty-five babies were burned to death, was purposely caused by a female orderly of the institution, Berthe Courtmanche, who is said to have periodical attacks of fire mania. She has just confessed.

The former Russian Dowager Empress and three Princesses and two Grand Duchesses, whose names are not reported, were burned to death about a month after the Russian Emperor was shot, according to a story reaching London. The source of the story is given consideration in some quarters, and an investigation has been started.

Cologne, Coblenz and other German towns, killing or injuring many persons, says the Het Volk of Amsterdam. The newspaper says the number of casualties published in the German newspapers are much under the actual total. It adds that many residents of the towns that are being raided are fleeing to Holland for

Allied airmen are daily bombarding safety.

A circular sent out by the Minister of Shipping of Newfoundland gives warning to all vessel owners in the colony that voyages to Sydney, Halifax and United States ports are for the present attended by the greatest danger to ships from submarines. Shipowners who commission their vessels to go to sea after this warning, the circular states, do so at their own risk.

The trial by court-martial of Giorgio Carpi, Achille Moschini, Guglielmo Partolini and Mario Azzoni on the charge of being implicated in the blowing up of the Italian battleship "Benedeto Brin" has concluded. The first two were sentenced to be shot in the back after degradation, and Guglielmo Bartolini to hard labor for life after degradation. Mario Azzoni was acquitted, his guilt not having been proved.

John W. Davis of West Virginia, now Solicitor-General of the United States, has been selected by President Wilson to succeed Walter Hines Page as Ambassador to Great Britain. The announcement of Davis' selection disclosed that he had arrived safely in Switzerland, where he is to head the American delegation at the Berne conference between American and German missions on the treatment and exchange of prisoners of war.

German airplanes have been busy bombing the St. Quentin sector in France and the enemy utilized a number of new type planes of huge size. Three of these shot down east of Peronne were capable of seating eight men. The most astounding thing about them, however, was that they carried bombs thirteen feet long, which contained 2000 pounds of explosives. This is by far the biggest bomb the Germans have yet produced.

With the Wits

A Right to the Name.—"You call that patch a war garden?"

"Hasn't it the appearance? Since the drought hit it, it looks like a section of No Man's Land."—Washington Star.

Fair Warning.—Old Gent—Do you think the Germans could really bombard London with a big gun?

Tommy—You never know, guv'nor. If you've got any sense you'll leave off wearing your best hat.—London Opinion.

One Against Arbitration.—"Reasonin' wif a man can't always be depended on to prevent a fight," said Uncle Eben. "Gittin' de worst of an argument is mighty liable to make a weak-minded person so mad dat he pulls a razor."—Washington Star.

Remodeled Name.—"Why do you keep referring to von Ananias? There is no such person mentioned in the Bible."

"I put the 'von' in myself. The name of the original mendacity expert should be Germanized as much as possible."—Washington Evening Star.

Might Be Worse.—"Don't you sometimes get tired of explaining to your constituents what you have been doing in Congress?"

"No," answered Senator Sorghum, "I'm thankful if they give me a chance to explain instead of jumping at their own conclusion."—Washington (D. C.) Star.

Misrepresenting a Bee.—English officers and men still experience difficulties with the language at the front. Recently an officer, seeing a swarm of bees settled near his billet, rushed to adjacent cottages to inform the residents. But explain verbally he could not. So, taking paper and pencil, he drew a rough sketch of a hive, then waggled his fingers in what he thought the correct wing-like way. It was a failure, so he sketched a number of bees, and buzzed a beesome buzz. Thereupon the cottagers, together with one consent, bolted to their dugouts, believing that he meant hostile aircraft overhead.—London Daily Chronicle.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 7. SAN FRANCISCO, WEDNESDAY, OCTOBER 23, 1918. Whole No. 2509.

CALIFORNIA'S LABOR CONCLAVE.

Reports of Delegates to State Federation of Labor Convention.

To the Sailors' Union of the Pacific:

Your delegates to the Nineteenth Annual Convention of the California State Federation of Labor, which was held at San Diego, Cal., October 7-11, inclusive, hereby respectfully report as follows:

With more than 200 delegates from every part of the State in attendance, the convention was called to order by Walter Barnes, chairman of the Convention Committee. Mayor L. J. Wilde welcomed the delegates in behalf of the citizens of San Diego. Preceding the opening session there was a parade of the delegates through the principal streets of the city.

As the first order of business the convention by unanimous vote ordered the following telegram sent to President Wilson:

October 7, 1918.

Hon. Woodrow Wilson,
Washington, D. C.

We, the delegates attending the nineteenth annual convention of the California State Federation of Labor, representing the organized workers of California, heartily congratulate the Army, Navy and Air Forces on their magnificent devotion and courage. We are confident that the bravery shown and the suffering endured by all concerned will in the near future secure a lasting and triumphant peace for the peoples of the world.

CALIFORNIA STATE FEDERATION OF LABOR,
Daniel C. Murphy, President,
Paul Scharrenberg, Secretary.

The reports of the executive officers and organizers showed that during the past year the organized labor movement of California has thrived and prospered notwithstanding the fact that thousands of California trade-unionists are now with the military and naval forces in our war to make the world safe for democracy.

In Los Angeles, where the opposition of organized labor has always been strong, the unions had an unprecedented increase in membership and many new unions have been organized.

The report of the Secretary showed a net increase in the membership of the Federation by approximately 6500 (making the total 78,000). The number of local unions affiliated with the Federation is 486; Central Labor Councils, 21.

The Federation's finances were shown to be in a healthy condition. The total receipts for the year were $9428.61. The total disbursements amounted to $8985.71. The balance on hand at the close of the fiscal year was $4320.52 in cash and $1500 in Liberty Bonds.

Measures on November Ballot.

The convention went on record upon several of twenty-five measures pending before the people of California at the November election.

Following are the convention's recommendations; the ballot numbers and titles being used in describing the various measures:

No. 1—Liquor Regulation, Initiative Act (the so-called Rominger Bill). Vote No.

No. 4—Absent Voters, Assembly Constitutional Amendment No. 1. Vote Yes.

No. 9—Appellate Court Divisions, Senate Constitutional Amendment No. 45. Vote Yes.

No. 15—State Budget Board, Senate Constitutional Amendment No. 15. Vote Yes.

No. 20—Health Insurance, Senate Constitutional Amendment No. 26. Vote Yes.

No. 22, Prohibition, Initiative Act for Complete Prohibition. Vote No.

No. 23—Workmen's Compensation, Senate Constitutional Amendment No. 30. Vote Yes.

The Reconstruction Programme.

No less than six different resolutions were introduced on various phases of demobilization and reconstruction after the war. In reporting upon these the Committee on Resolutions made the following recommendations:

"We, your committee, have given careful reading and thoughtful consideration to the various resolutions submitted relative to Reconstruction after the War.

"We are keenly alive to the necessity of preparing for the home-coming of the boys from 'over there.'

"Our boys, who in the interest of democracy responded to the call of the country to strangle the military autocracy and make the world safe for democracy.

"The authors of the resolutions being actuated by motives of the highest and noblest nature have made it a task, indeed, for your committee to report upon any one resolution.

"We wish to commend the spirit that actuated the brothers in the preparation of the resolutions, realizing that of all the problems claiming the attention of society, this question transcends all questions in importance and urgency, and Organized Labor, being a component part of society, is vitally interested in the manner in which these boys are received in the communities and homes from whence they came, inasmuch as the wholesale discharge of these men without first considering the communities' interests would throw the industrial machinery of the country into chaos and bring great harm to the workers, whose interests we are commissioned to guard. Appreciating the thought, running like a silver thread through these resolutions, your committee recommends that this matter be referred to a committee of seven to be appointed by the President of this Federation. The President and Secretary of this Federation to be members of said committee. That committee to make a thorough study of this question, and to submit a blue print—as it were—at the very earliest possible date to the Executive Board of the State Federation of Labor of the State of California, to the end that some sane solution may be devised to maintain the equilibrium of our movement and safeguard the interests of the boys when they return from 'over there.'"

The report of the committee was adopted and the following special Committee on Reconstruction appointed:

Seth R. Brown, Los Angeles; Walter J. Yarrow, Coalinga; George A. Tracy, San Francisco; Witten W. Harris, Bakersfield; J. B. Dale, Vallejo; President Daniel C. Murphy and Secretary Paul Scharrenberg.

Farmer-Labor Platform Endorsed.

The convention endorsed the Declaration of Principles and the Economic and Political Platform of the California Union of Producers and Consumers.

The previous convention of the California State Federation of Labor formally initiated a get-together movement of Organized Labor with the Organized Farmers and the Co-operative Societies of the State and authorized a committee to meet with the Farmers and Co-operators and, if possible, unite upon a common platform on legislative and economic issues. As a result the Union of Producers and Consumers was organized and the platform (previously published in the Journal) has now been formally adopted by the organized labor movement of the State.

A resolution introduced in this connection proposed "further activity in conjunction with these affiliated groups so as to place candidates in the field by nomination and endorsement of a full ticket."

This resolution was referred to the Executive Council for further consideration and action.

Recommendations on the Mooney Case.

The Committee on Officers' Reports submitted the following to the convention anent the Mooney case:

"President Murphy in his annual report to the convention stated that 'a new trial is necessary for Thomas J. Mooney.'

"Secretary Scharrenberg, in his report, chronologically reviews for the year the activities and developments, step by step, of the case. He reported that on January 26, 1918, the Federal Commission after a painstaking and thorough investigation unanimously recommended to the President that Mooney receive a new trial. He also reported that President Wilson appealed to Governor Stephens repeatedly to grant Mooney a new trial. He further reported that the various labor groups of the world have appealed for simple justice for Mooney, directly to the executive of the nation, of the State and organized labor.

"This convenion should attempt to allay the unrest that exists throughout the labor world as a result of this miscarriage of justice. Regretfully we must record the fact that Governor Stephens to date has not harkened to the appeal of the President and the people. It must be noted that labor bodies in many parts of the country threatened to strike and were only held in check by Mooney himself, on May 1 last, through a strong appeal to the workers not to interfere with essential war industries. In order to avoid any drastic action being taken by labor, your committee recommends:

"That upon the adjournment of this convention, the Mooney case, in its labor aspects, be presented to the War Labor Board, of which Frank P. Walsh and William H. Taft are joint chairmen, to be dealt with as a war issue.

"This is urgent, in view of the menace to the

uninterrupted prosecution of necessary war industry, which further delay in securing justice for Tom Mooney and Warren K. Billings will bring."

The recommendations of the committee were concurred in

Summary of Resolutions Adopted.

A total of 46 resolutions dealing with many subjects and matters were introduced. Several of these have already been dealt with. Among the remainder the following should be noted:

Requesting that the Priorities Board place the commercial printing industry with others included under the fourth classified list, for preference for fuel and other supplies necessary to enable these plants to continue in uninterrupted operation.

Condemning Rent Profiteering and recommending to the Executive Council to propose means of meeting the evil.

Endorsing a bill prohibiting the employment of children under fourteen years, in any occupation, trade or profession, for profit.

Submitting to the consideration of the Executive Council the establishment of a Legal Department.

Urging the enactment of a law giving a subsidy of State funds and State credit to co-operative organizations formed under proper assurances of security to the government of the State.

Protesting against the discrimination against union men pursued by the Baker Iron Works of Los Angeles and referring the subject matter to the War Labor Board, with the request that they make an investigation of industrial conditions in this plant and that a speedy remedy be sought.

Urging the enactment of a law making it compulsory to equip all motor-going vehicles on public thoroughfares with windshields.

Petitioning Congress to enact the necessary legislation, providing for a Federal Personnel Commission upon which the employes shall have adequate representation and which commission shall have full authority to make investigations concerning salaries, wages and conditions of employment of all employes in the civil establishments of the United States Government and of the Government of the District of Columbia, so as to develop the standardization of duties, wages, salaries, hours, efficient ratings, titles and submit recommendations to Congress concerning same.

Pledging support to the affiliated postal employes in their efforts to insure a more strict observance of the letter and spirit of the postal eight-hour law by securing legislation establishing a rate of time and a half for all work in excess of eight hours.

Declaring that every member of an affiliated union must carry a card of each trade, craft or profession he follows, provided such trade, craft or profession is organized into a union.

Endorsing the McKellar-Keating bill (providing for retirement on annuities of Federal employes) and urging its favorable consideration by Congress.

Declaring that whenever a public utility of the State of California reduces wages, lengthens hours of service or abrogates overtime agreements, the cost of which has been covered by permission to charge increased rates to the public, the Executive Council of the California State Federation of Labor shall immediately file a complaint with the regulatory body having jurisdiction urging a proportionate reduction of such rates.

Protesting against the refusal of certain judges to accept the war bonds of the United States Government as bail in the cases pending before them.

Declaring that the keeping open of any barber shop all night or after 7 p. m. is unnecessary and a waste of man power.

Requesting that the United States operated railroads haul United States shipbuilders to the United States Government work in the shipyards of Southern California instead of putting up with the inadequate service of the trolley lines.

Urging that representatives of labor be accorded seats in the world's peace conference with vote and voice in the deliberations. Also asking President Wilson to use his good offices to that effect.

Endorsing a bill providing for the Sunday closing of barber shops, stores, etc.

Favoring the enactment of a Masonry Inspectors' bill, similar to those that are in full force and effect in other States of the United States.

Endorsing and pledging support to the Fourth Liberty Loan.

Endorsing and pledging support in the United War Work campaign for the purpose of raising the sum of $170,500,000 for the combined use of the American Library Association, the Jewish Welfare Board of the United States Army and Navy, the National Catholic War Council, the Knights of Columbus, the Salvation Army, the War Camp Community Service, the Young Men's Christian Association and Young Women's Christian Association.

Endorsing a California Sanitation and Examination law for Barbers along lines approved by the Journeymen Barbers' International Union of America.

Practically all the incumbent officers were re-elected for another year.

George A. Tracy of the San Francisco Typographical Union was elected as the Federation's delegate to the next convention of the American Federation of Labor.

Bakersfield was selected as the next convention city.

During our stay at San Diego we were hospitably entertained and with only minor exceptions the work of the convention was carried on in a fraternal and harmonious spirit. Altogether, your delegates are of the opinion that the progressive policy of the Federation has borne splendid results and that the achievements of the California labor movement are but a harbinger of still greater and better things to come.

Fraternally,

HARRY OHLSEN,
E. A. ERICKSON,
JOHN H. TENNISON,
JOS. FALTUS,
FRANK JOHNSON,
PAUL SCHARRENBERG.

THE RIGHT TO A DISCHARGE.

EDITOR, SEAMEN'S JOURNAL:

On October 5, 1918, Judge Dooling, at San Francisco, construed in favor of three seamen off the "Munrio" shipping articles for a voyage from Norfolk to the west coast of South America and back to a final port of discharge in the United States. The shipowner claimed that the seamen were bound to remain on the vessel until her return to the east coast. The opinion is given below.

Yours very truly,

F. R. WALL.

San Francisco, October 15, 1918.

Judge Doolings Opinion.

"Libelants shipped as seamen on board the 'Munrio' for a voyage 'from the port of Norfolk, Va., to one or more ports on the west coast of South America, via Canal Zone and such other ports and places in any part of the world as the master may direct, and back to a final port of discharge in the United States, for a time not exceeding six calendar months." The vessel left Norfolk on June 15, and proceeded to Cristobal, Panama, where she discharged her cargo of coal. She then proceeded light to Taltal, Chile, to be loaded with nitrate, with which cargo she went direct to San Francisco, arriving there August 9.

The cargo was discharged in San Francisco and another cargo taken on with which the vessel sailed from San Francisco on August 24, whither, the record does not disclose.

"On August 14, the libelants asked the master for their discharge. This was refused, and they left the ship. Later they returned for their wages but the master paid them only one-half the amount, and as they did not return marked them as deserters. Libelants contend that under the shipping articles they were entitled to discharge in San Francisco. The respondents contend that libelants were bound to remain by the ship until her return to the east coast of the United States. The question, therefore, to be determined is what is the voyage described in the language of the shipping articles quoted above. I think the voyage described is a voyage from Norfolk to one or more ports on the west coast of South America via the Canal Zone and such intermediate places as lie between such Canal Zone and the one or more ports on the west coast of South America and back to a port in the United States. The time of service is not definitely fixed, but is not to exceed six months. There is nothing in the articles showing that the vessel intended to return to the east coast within the specified six months, nor anything in the record to show that such was the intention, nor anything to show whither the vessel went upon leaving San Francisco.

"The definite things specified in the contract seem to me to be those stated, from Norfolk via Canal Zone, an intermediate places, to one or more ports on west coast of South America and back to a port in the United States. Respondents do not contend that they were bound to return to Norfolk, and I cannot see why the word 'east coast' should be read into the contract. There was no submission of the controversy to the Commissioner and no award.

"A decree will be entered awarding Villarino $126, Garcia $98.80 and Varela $89, together with costs.

"October 5, 1918.

"M. T. DOOLING,
"United States District Judge."

AMERICA'S EXAMPLE.

The Danish newspaper, "Politiken," in an editorial which has attracted considerable attention in Europe, says that America has sounded the death knell of the "old-fashioned militarism" based upon eternal "preparedness":

"Last year jeering voices in Germany spoke of America's platonic declaration of war. A country without an army and navy would be unable to bring an army to Europe, even if it had one! Nobdy believed in the possibility of raising an army of millions in a year. One had seen how long it took England to let her immense forces loose.

"Furthermore, it was argued, even if the human material were available, how, with short training, could it replace and outweigh the advantages possessed by the European powers, above all, Germany, with centuries of military traditions and years of preparation in arming?

"So one reasoned in Germany and outside. Now we live to see American transports cross the Atlantic apparently as safely as in peace times. Troops depart and arrive punctually—in August 300,000; in one year about 3,000,000.

"But there lies, in all this, a threat against the root of old-fashioned militarism. After this war even the most hardened militarists must ask themselves whether there is any sense in throwing mllions away on a peace time establishment, a gigantic army and navy, when the whole machinery can be improvised in a few months. That is precisely what America has done."

The troop train had just pulled into the station. A big, husky negro stuck his head out of the car window and shouted: "Say, boss, what town you-all call dis?" "This is Accotink." "And, boss, what state is dis?" "Virginia: Accotink, Virginia." "Well, well, Ah dun been travelin' on dis yere train foah days and foah nights. Where de debbil am dis yere France, anyhow?"

The injunction against the boycott is a negation of the first principles of free government—i. e., the right of petition.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

United States War Inventions.

The Committee on Public Information says American inventive genius has perfected a plan whereby potash is taken from the flue dust of cement works and this country is now independent of German potash for all time.

"For years before the war," it is stated, "Germany was buying up the world's supply of castor oil and storing it for use in lubricating air plane engines. We have perfected a mineral oil that serves as well as castor oil in all but the very fast fighting planes.

"We have discovered a way to make coal smokeless by extracting from it valuable by-products that have previously gone to waste.

"We have found a way to save half the oils, greases, and animal fats that have been lost in use in the past.

"We have produced a gas mask that can be worn for hours without discomfort.

"We have improved rifles and machine guns that give our soldiers weapons greatly superior to the enemy's.

"New methods and appliances for fighting submarines have overcome the U-boat menace. New industrial methods in ship building have speeded up our production beyond all expectation. Improvements in wireless communication have given our troops a great advantage on the battlefield. Improvements in medical science have reduced our army's death rate from disease to one-tenth of the lowest rate established heretofore.

"In short the nations whose inventive genius supplied the Germans with all their modern engines of war, have now so improved on those inventions that the Germans are fighting at an increasing disadvantage on land, on water, and in the air."

"Keep Schools Open," is Educator's Plea.

School Life, published by the Federal Bureau of Education, prints three pleas that schools be kept open regardless of cost during the war.

French educators send this message to America:

"Do not let the needs of the hour, however demanding, or its burdens, however heavy, or its perils, however, threatening, or its sorrows, however heartbreaking, make you unmindful of the defense of tomorrow, of those disciplines through which the individual may have freedom, through which an efficient democracy is possible, through which the institutions of civilization can be perpetuated and strengthened. Conserve, endure taxation and privation, suffer and sacrifice, to assure to those whom you have brought into the world that it shall be not only a safe but a happy place for them."

H. A. L. Fisher, president of the English board of education, says:

"At the beginning of the war, when first the shortage of labor became apparent, a raid was made upon the schools, a great raid, a successful raid, a raid started by a large body of unreflecting opinion. The result of that raid has been that hundreds of thousands of children in this country have been prematurely withdrawn from school, and have suffered an irreparable damage, a damage which it will be quite impossible for us hereafter adequately to repair. That is a very grave and distressing symptom."

P. P. Claxton, commissioner United States Bureau of Education, says:

"Every public officer intrusted with the support of public schools, should know that Europe's lesson to the United States as a result of the war is to keep the schools going; to make education during and after the war better and more effective than it has ever been. There are before us now just two matters of supreme importance: To win the war for freedom, democracy and peace, and to fit our schools and our children for life and citizenship in the new era which the war is bringing in."

Workers in Plants to Aid Government.

The War Industries Division of the Department of Labor announces that war industries' committees are being formed in all plants executing Government contracts.

These committees will consist of a chairman, who must be a shop worker; a representative of the employer; at least three shop workers and one representative of each department or division of the plant.

These committees are to be the connecting link between the Government and the plants in patriotic work. They are to hold weekly meetings and report their work to the War Industries Division.

"The chairman of a war industries committee," it is stated, "will introduce to the men Government speakers and do other work assigned to him by this division.

"We have instructed all those plants that the committee must be democratically chosen and the chairman must be a shop worker and not an employer.

"The duties of these committees will be strictly to act in conjunction with this division. They shall not have the right to consider wage questions or working conditions or act in any capacity as shop committees on grievances. They are purely and wholly patriotic committees, giving their entire attention to patriotic work in the plants.

"When the committees are selected, a certificate is forwarded to the chairman, making him a Government representative.

"It is the intention later on to issue to the members of the committees and to the chairman a bronze insignia of office, the design of which is now under consideration."

President Leads Allies.

The influential Manchester Guardian makes this comment on President Wilson's recent New York speech when the Fourth Liberty Loan campaign in that city was launched:

"Ever since America entered the war it has been plain, and time has made it plainer, that we have found in her not only reinforcement of power, but even more precious, reinforcement of statesmanship.

"More important even than help in win-

World's Workers

A young Japanese girl has obtained a license as sea captain. Her name is Tatzu Imamizo, and she received her training from her father, with whom she sailed the Inland Sea. When she applied for a license the authorities hesitated, for she was the first woman who had ever sought recognition as a skipper. As there was no provision permitting discrimination on account of sex, the license was issued.

Belgian labor will be greatly hampered after the war, for the Germans have pillaged the factories of that country. The factories in Ghent have been obliged to give up copper, iron wedges, belts, cables, pneumatic tools, lathes, and planes. More than twenty steam boilers have been sent from Ghent to Germany. Business houses are also being forced to give up cast iron, steel, pulleys, gears, and reserve parts.

Six thousand workingmen and workingwomen cheered the war aims of President Wilson at a mass meeting held recently at Mannheim, Germany, according to the correspondent of the Swiss Humanite. A member of the Independent Party, in a speech, outlined the President's program as formulated in January, 1918. "On the basis of the Wilson war aims peace could be established with a little good will," the speaker declared. The Humanite says: "The applause which greeted his words sufficed to show that the greater part of the persons in the hall were of his opinion, but the authorities were unwilling that the assembly should manifest its sentiments in this respect by a formal vote."

The radical wing among the federated trade unions in Norway has gained the upper hand and demands the immediate inauguration of the universal eight-hour day. The conservative wing, on the other hand, has proposed to the Government that the eight-hour day be enforced by law during the war and as long as unemployment and hardship may exist. An industrial depression prevails in Norway on account of the decrease of exports and imports due to the U-boat warfare, and intense suffering is said to exist among the workers in the larger industrial centers. Unless the government shortens the workday and equalizes employment so that all the workers will obtain better living conditions, it is likely that a general strike will be called by the radicals to force action.

The Canadian Railway Board of Adjustment has ordered wage increases for telegraphers employed on the commercial lines of the Canadian Pacific Railroad. These employes are members of the Commercial Telegraphers' Union, which handled the workers' case. Wage increases range from 25 to 40 per cent. Automatic telegraphers are included in the increase, being advanced from a monthly rate of $60 to $75. Day work is reduced from eight and one-half to eight hours, and night work from seven and one-half to seven hours. Typewriters will be furnished by the company. Supervising chiefs, who have heretofore been denied the right to organize, are included in the schedule. The increases date from May 1, which gives the key men nearly five months' back pay. These gains mean an annual increase of $500,000.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Pacific Coast Marine.

The Osaka Shosen Kaisha offices at Seattle announce that five new ships of the fleet of that concern would shortly be calling regularly at this port.

The merchant marine training school at Seattle during September placed 678 recruits aboard twenty different vessels and recruited 717 more men for training aboard the steamship "Iroquois" and "Chippewa."

The steamer "Benito Juarez," well known on this Coast from the Sound to Mexican ports, has been sold by the Benson Lumber Company to Manila parties. The price and terms of sale have not been divulged. The vessel has recently been employed in towing rafts.

Al Zipf, traveling manager of the White Pass & Yukon Route, arrived at San Francisco during the week, accompanied by other officials of the company, and will remain here for several weeks. Zipf said that the travel to Alaska has been lighter than usual this season, but the indications are that it will be extremely heavy when the war stops.

Probably the largest check sent by any shipping concern in the Northwest was recently forwarded to the Collector of Internal Revenue by F. M. Studley, Seattle manager for the Nippon Yusen Kaisha. The check was for $1,240,000, representing the income tax and excess profits tax of that concern, which has done an enormous business in the last fiscal year.

"Hull 17," the first ship to be built on Government contract by the Northwest Steel Company of Portland, Ore., was launched with impressive ceremonies in the presence of shipyard workers, their families and company officials. Mrs. W. B. Beebe, wife of the vice-president of the company, christened the vessel the "West Kyska" as the 8,800-ton craft slipped off the ways.

The Portland, Ore., Commission of Public Docks has passed a resolution asking the City Council to enact an ordinance submitting to the electorate at the coming general election a charter amendment authorizing the issuance of bonds totaling $5,000,000 for the construction of a 14,000-ton dry dock, the completion of the St. Johns terminal and other important port and harbor facilities.

On instructions from Washington, Collector of Customs John O. Davis of San Francisco, has notified steamship companies operating bay and river vessels that men of German nationality must not be employed either in the dock force or commissary of the steamers. Austrians, Bulgers and Turks will be permitted to retain their positions after questioning by Federal officials. Davis took up the question with Washington of the employment of enemy aliens on the steamers several months ago.

Two hundred 500-ton wood ships are to be built in the shipyards of the Columbia River district, if Congress grants the appropriation for shipbuilding asked by Chairman Hurley of the United States Shipping Board and its program is carried out. It is practically assured, according to word brought from Washington by J. L. Hubbard, chief inspector in Portland for the Emergency Fleet Corporation, that if more ships are built here they will be of the type designed by the wood shipbuilders of this district.

According to a cablegram from London, the Controller of Import Restrictions has stated that it is the intention of the Ministry of Food that all further shipments of canned salmon shall be on the account of the Government and at Government freight rates. Regarding salmon from the United States, it is proposed to purchase only such quantities of pack as importing firms here have already paid for. It is estimated that this quantity amounts to 200,000 cases. (Canned salmon has been on the list of prohibited imports in the United Kingdom since February 23, 1917).

The wreck of the German sea raider "Seeadler," lying aground at Mapella, is to be sold at auction by the French Government, according to dispatches received by the maritime department of the San Francisco Chamber of Commerce. The information comes from the French Consulate. The famous raider was formerly the bark "Pass of Balmaha," of 1,571 tons. It was provided with Diesel engines of 1,200 horse-power by the Germans. This was the same engine displayed at the Antwerp Exposition. The hull is badly damaged, but the engine is in good shape and can be used. There is also a large quantity of hawsers, tanks and other equipment on board. No bid of less than $2,000 will be considered.

Advices received by the maritime department of the San Francisco Chamber of Commerce reported the arrival of another wooden steamer at a Pacific port that could have continued the voyage if a goodly portion of the Pacific Ocean had not decided to creep into the holds through the medium of the numerous seams in the hull. The vessel has put into a port and will go into drydock for a good and thorough calking before again proceeding to sea. According to shipping men, the amount of leakage in a number of wooden ships may be due to the introduction of timber in the construction that has not been seasoned as thoroughly as was the case in the old days of American sailing ship supremacy, when every stick going into a clipper was seasoned dry and hard as bone.

The Emergency Fleet News reports that the launching at Seattle by Skinner & Eddy Corporation of two 8800-ton deadweight steamers gave the plant a record of thirty-two ocean-going boats launched since the steamship "Niels Nielsen" took the water on September 21, 1916. Of the number nineteen boats have been launched since January 1. The Skinner & Eddy Corporation broke ground for the plant February 16, 1916. In 1917 it launched eleven ocean steamships, aggregating 100,000 tons deadweight, breaking the record for output of tonnage per slip. The nineteen ocean vessels it has launched since January 1 aggregate 167,200 tons deadweight. The total deadweight tonnage for the two years is 285,200. Three 7500-tonners launched by Skinner & Eddy from its No. 2 yard early in the summer are not included in the total, these vessels belonging to the old Seattle Construction & Dry Dock Company. The two plants operated by the company at Seattle have ten slips in all.

The committee of port charges, created by the San Francisco Board of State Harbor Commissioners to investigate and report on harbor conditions, will also investigate the question of supplying cheaper fresh water to ships. Shippers have said that San Francisco is the most expensive port in the matter of fresh-water charges of any on the Pacific Coast, and an attempt will be made to obtain water either free or at a nominal rate. At Seattle the rate is about $10 for a ship. One plan under consideration is to give the water free and have the expense defrayed by a general absorption by the water users of San Francisco. Another scheme that may be tried is to have the Harbor Board install wells for shipping needs, provided a supply can be obtained that is of quality satisfactory for the needs of drinking and also for boiler purposes. An artesian supply of water was revealed several years ago when old piles were pulled at the foot of Mission street, but a test into quality was not made. Shipping men say that if water can be given to the ships for nothing, or at a low rate, it will tend to make the port more attractive and may bring new business to San Francisco.

A huge extension of foreign trade is promised San Francisco and the Pacific Coast through the formation of a new steamship merger, accord to N. A. Davis, San Francisco manager for Frank Waterhouse & Co. Under the name of the International Shipping Company the following concerns have merged their ships and interests: The Frank Waterhouse Co. of San Francisco and Seattle; Iwai & Co., Ltd., of Kobe; I. Shii of Kobe, Senda Barnet & Co., Ltd., of Calcutta, and Suzukii & Co. of Kobe. The merger will control more than 100 cargo steamers, representing more than 500,000 deadweight tons. Plans for new steamships already prepared indicate that within a few years the fleet of the organization will total about 1,000,000 deadweight tons. The Waterhouse company has worked on details for more than a year. The finishing touches to the deal were completed recently by President Waterhouse and C. E. Harvey, general manager. The immediate result of the new project will be that thousands of tons of merchandise stored in the warehouses of San Francisco and other Coast ports will now be moved across the Pacific. In less than one month the big freighters of the company will be plying regularly in and out of San Francisco's model harbor. Officials of the International Shipping Company will confer with the Board of State Harbor Commissioners soon and discuss the matter of pier and terminal facilities.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 Six months - - - $1.00
Advertising Rates on Application

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

Headquarters of the Sailors' Union of the Pacific, 59 Clay Street, San Francisco.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, OCTOBER 23, 1918.

A STRAY GEM OF TRUTH.

The editorial policy of practically every one of the weekly and monthly shipping journals published along the Atlantic seaboard is frankly and consistently anti-labor.

Any policy, no matter how ridiculous or impossible, if advocated by a Chamber of Commerce or a Merchants' Association, is promptly espoused and championed in these journals "devoted to commerce and shipping."

Only occasionally a stray gem of truth slips into their editorial columns.

Here is one too good to pass by without comment:

> If crew expenses were the principal economic factor of ship operation, British shipping would have been hopelessly out of the running years ago. While British seamen are better paid than those of other European countries, British tonnage has always been notoriously economic of operation. Therefore, there can be little merit in the proposition that unless American vessels can be manned by Chinamen, Malays or Zulus, American ships will not be able to compete with European boats manned by white men.

This, of course, is well understood by all experienced ship operators. Yet, but few of them are willing to frankly and fairly discuss that issue.

Due to the economic advantages of the Seamen's Act the wage cost of operation between American and British ships in the Atlantic trade has been practically equalized. In the transpacific trade there is still a material difference. But it is by no means a problem hopeless of solution.

As Mr. Rosseter, the new Director of Operations of the United States Emergency Fleet Corporation, so forcefuly and ably said in his farewell address at San Francisco:

> We must face some offset to make up for the economies of other nationals on the item of wages, and the care and keep of the men. I am a strong believer in efficiency, and that our American boys will rally to sea service and will bring a fine spirit and an efficiency which will go a long way to offset their extra cost. Again we must apply American ingenuity to the problem of accomplishing advantages in our ships and while this had of necessity to be overlooked in the beginning because of urgency, it is now being carefully studied, it may be that we can discover some improvements in propulsion, and this is a very important item in overseas carrying trade. We have a very great offset in oil, and our European friends, especially those in the Scandivanian countries, have shown us the enormous advantages of the use of oil in internal combustion engines. It might not be amiss to say that as between an ordinary reciprocating engine and a Diesel motor the economies are such as to pay more than the entire wage and provisioning of the crew, to say nothing of the difference betwen the American, European and Asiatic scale.

This problem and every other serious question confronting the American people can be settled—and settled right. But it can be done only by genuine co-operation of all Americans. As long as Chambers of Commerce are dominated by would-be union-busters and hopeless reactionaries of the Dollar type real team work between labor and capital is out of the question. Fortunately, there are signs of a change for the better. The war has revolutionized many things that were accepted as "permanently established." And it is to be hoped that the stray gems of truth now appearing in publications maintained by the shipping interests are indications of a belated but happy awakening in those benighted circles.

FURUSETH OBJECTS.

When Mr. Axtell, of New York, in a recent communication published in these columns, advanced the suggestion to give some sort of public recognition to Andrew Furuseth, while he is still among the living, the editor of the JOURNAL knew very well that there would be an immediate protest from the grand "old man."

Well, the protest is here with a peremptory request that it be published.

Furuseth says:

> The suggestion made by Mr. Axtell in the Journal is an insult, of course unconscious to all the men who have understood our struggle and who have suffered to bring it to the present stage. Our movement, now in life struggle will need men, not monuments. With subtle enemies on every side using all the opportunities offered by present conditions let us be awake working, praying and be ready for sacrifice. We shall need all our nerve and wits to be permitted to continue to live. We have no time for twaddle or self deception. Let us get together in our meetings and on the vessels to consult together in order that we may save our movement or go down together in one great struggle worthy of our struggles for others in the past. In the name of that past I call on those who can see and understand to drop all nonsense and work for our cause. We need men—not monuments! Tomorrow is also a day; but only for men willing to suffer, to endure and to do!

All that Furuseth says is quite correct, except, his notion that Mr. Axtell's suggestion is not perfectly proper, timely and eminently appropriate.

It is true, bouquets and public recognition of the character suggested by Mr. Axtell are not usually given to living men. But we are not living in a "usual" world. Little remains of stereotyped customs and habits. And if this new order of things should bring some flowers for the living there ought to be no complaint from one who has received more jolts and hard knocks than an ordinary man is reasonably expected to carry—without a breakdown.

The remarkable progress of United States shipbuilding is ilustrated by the announcement that all the ships delivered to the Shipping Board during the second week of October were, for the first time since this country began to build ships for the war, of the contract type—contracted for by the United States Shipping Board Emergency Fleet Corporation. One of the ships on the list of deliveries for the second week of October is the California-built "Challenger," one of the four 11,800-ton steel freighters that left the ways of the Bethlehem Union Shipbuilding Corporation of Alameda, on the afternoon of July 4, this year. From keel laying to delivery only 228 calendar days elapsed. Before the war a ship of this size was two years under construction.

RECORD CARGO HANDLING.

The United States Shipping Board announces that in its competitive tests four vessels have recently made noteworthy records in loading and discharging in the New England coal trade and maintained the pace set in the competition between the vessels engaged in hurrying coal to New England from Baltimore, Newport News, and Norfolk to New England destinations.

The "Cicoa" cut down the average time of loading at Baltimore 30 hours and 35 minutes, the average being 38 hours and 5 minutes, and the "Cicoa" performing the trick in the short time of 7 hours and 30 minutes, in a fleet of eleven vessels loading. This cuts down the average half round trip time from 128 hours to 97 hours and 25 minutes.

The "Lake Benton" cut down the loading time, or the time in port, at Norfolk 62 hours and 25 minutes, this being the record in a fleet of thirteen vessels loading at Baltimore. This shortened the average half-round trip time from 148 hours and 20 minutes to 85 hours and 55 minutes. The average time of loading is 91 hours and 50 minutes, and the record made by the "Lake Benton" was 29 hours and 25 minutes.

In discharging at Boston, the "Maldem" cut down the average time 53 hours and 42 minutes, the average time being 97 hours and 5 minutes, and the "Maldem" getting rid of its cargo in 43 hours and 23 minutes. This cuts down the average half-round trip time from 162 hours to 108 hours and 45 minutes. The time of the "Maldem" was the best in a fleet of fifteen other vessels loading.

The "Minneapolis" knocked 27 hours off the average time in discharging her cargo of coal at Providence, the average time being 65 hours, and the record of the "Minneapolis" 38 hours among eight vessels loading. This reduces the average half-round trip time from 111 hours and 40 minutes to 84 hours and 40 minutes.

MAJORITY RULE.

It really does seem certain as if the fifth year of the world war will be the last. Though "beaten to a frazzle," the Kaiser is still hoping to snatch a victory from defeat by a peace offensive, the obvious purpose of which is not peace, but a division in the ranks of the Allies. Defeated by the strategical unity of the allied command on all the fighting fronts, the German ruling clan are now bending every energy to the promotion of political and diplomatic discord among those arrayed against them. Their prospects for success are, of course, utterly hopeless. The end of Czarism came some time ago. Kaiserism is now on its last legs. All that remains of royalty is of a negligible quality, so far as real power is concerned. In fact, it has repeatedly been stated that our own President Wilson has more authority and wields greater power than any of the crowned heads in Europe now banded together in the war upon Prussian autocracy.

But the essential difference between our Chief Executive and the crowned heads of European nations is that our President is elected by the people to hold office for a limited period, while the hereditary rulers not only hold their jobs for life but pass them along to their children and grandchildren, yet unborn. To be sure, as long as this is done by the consent of the governed there can be no reasonable complaint.

In the final analysis the real test of de-

mocracy is the universal franchise and absolute responsibility of the governing power to the will of the majority. Then, and then only, is it perfectly safe to retain such luxuries as hereditary rulers.

Mr. Harvey O'Higgins of the United States Committee on Public Information vouches for the fact that under Federal control the number of railroad officials drawing salaries of $5000 a year or over has been reduced by 400 and $4,615,000 a year has been saved. The expenses of the law department have been reduced $1,500,000 a year. By the consolidation of ticket offices, and the abandonment of competition, it is estimated that $23,566,633 will be saved. And of this amount, $7,000,000 will be saved on advertising bills. At the same time wages have been raised; the eight-hour day has ben granted; women are receiving the same pay as men for the same sort of work; and negroes are no longer being discriminated against in their wages and conditions of employment. Under the circumstances, it certainly is not surprising that selfish interests are bitterly knocking the permanent public acquisition of the railroads. Considering the splendid results of the brief period of Federal control it is strange that we have not had more grunts of dissatisfaction from the leave-well-enough-alone brigade.

Among those who fell victims to that strange epidemic now sweeping through Pacific Coast States is Harris G. Lundberg (see official "Died" notice), for many years an active member and for a considerable period an officer of the Sailors' Union of the Pacific. The deceased at various times represented the Union in the conventions of the International Seamen's Union of America and the California State Federation of Labor. He also served as a delegate to the San Francisco Labor Council and the old City Front Federation. Comrade Lundberg had a carefree disposition. His very presence spread an atmosphere of optimism and his untimely death will be mourned by a host of friends. Farewell, old friend—

Men drop so fast, ere life's mid stage we tread,
Few know so many friends alive, as dead.

During the Fourth Liberty Loan campaign, just closed, San Francisco labor organizations subscribed a total of $178,750.00 from their respective treasuries. As in previous drives the Pacific District Unions of International Seamen's Union of America were well at the top of the list. The Sailors' Union of the Pacific, the Marine Firemen, Oilers and Watertenders Union of the Pacific, and the Alaska Fishermen's Union each purchased $10,000.00 worth of bonds. The Marine Cooks and Stewards' Association of the Pacific Coast subscribed $2,000.00. The Liberty Loan subscriptions made by individual members of these unions cannot be accurately estimated but is known to run way into the millions.

The lessening of the daily hours of labor increases the total of products by increasing the opportunity and disposition for consuming them. The sum of the difference between a savage and a civilized state is merely the difference between men who have time and inclination to gratify their physical needs only, and men who have time, inclination, and determination to indulge and cultivate the intellectual side of their nature.

LLOYD'S AND THE WAR.

How the War Has Changed the System of Marine Insurance Regardless of an Invincible Navy.

As is very well known, marine insurance is the chief business conducted at Lloyd's. How has the war affected this immense work? Everything in the war turns upon shipping and the security of shipping. Insurance is the index of security. Under its Act of Incorporation the first function of Lloyd's is to provide for the conduct of marine insurance by its members and subscribers, and its second function is to protect the interests of its members in respect of shipping cargoes and freights. Undoubtedly the business of marine insurance is of tremendous importance to Great Britain, depending as that country does so largely upon overseas transport for the import of much of its food and raw materials, and the export of coal and other resources, as well as of its manufactured products.

The war has changed the system of insurance with many other things, and some prevailing ideas on marine insurance questions have changed also, says a correspondent of Lloyd's Weekly News. Lloyd's always foresaw the great difficulties that would arise in war. They had had very large experience, and always took the sound view that rates of marine insurance depended entirely upon the possession of an invincible navy. Before Trafalgar the premium for war risks alone on goods from Britain to Gibraltar rose to 23¼ per cent. After Trafalgar it fell to 5 per cent., and there was a common opinion that 5 per cent. would prove too high as a war premium. The evident deduction, therefore, is that, notwithstanding the growth of the hostile navies and the new means they employ for the destruction of shipping, the British Navy is relatively more powerful and effective in its sea command even than in former wars.

The idea of state insurance was broached long before the war. It had been seriously discussed, but underwriters had doubts as to the feasibility of the scheme. It was thought that it would be very difficult for the Government to settle what the premiums should be. What security would the Government have that the ships or cargoes were what they represented themselves to be? Lloyd's themselves, with every facility for finding out information and conducting investigations, were not infrequently exposed to attempted fraud. The former Secretary of Lloyd's expressed the view that if their Corporation was so assailed a Government office might be looked upon as a legitimate target by the unscrupulous.

The Government at the very beginning of the war saw that it was necessary to give confidence by instituting a system of marine insurance, now conducted by the War Risks Committee under the Board of Trade, and was able to adopt a low rate, which has fluctuated, however, from time to time, and has varied with the destination of the ships. It rose a little when the submarine menace reached its extreme virulence. Lloyd's undertake a large amount of this business, their rates corresponding with those of the War Risks Committee.

The Corporation of Lloyd's has a vast organization for the collection of intelligence. Intelligence has always been of supreme importance to the merchant, the insurer, and the shipowner, and thus from the very day when Edward Lloyd, in the latter part of the seventeenth century, made the old coffee-house in Tower Street the resort of men influential in the world of shipping, the system of intelligence has grown. The Navy has always gained advantage from the efficiency and accuracy of Lloyd's information. It is recorded that, in 1739, the Corporation of Lloyd's informed the Admiralty of the capture of Porto Bello by Vernon before the Government received news of the event. Lloyd's have always worked in close touch with the Admiralty, day by day and hour by hour, and never more closely than at the present time, when the movements of shipping are of such supreme importance, and are so vitally secret.

Lloyd's signal stations have been established and maintained in every part of the world, and in a single year over 240,000 ships' movements have been reported through these stations. In addition to this, there is a Lloyd's agent or sub-agent at every port in the world, and these number over 1,500. Every Lloyd's agent reports regularly by telegram and by letter all shipping movements and shipping casualties in his district, and before the war nearly 4,000 shipping movements and reports were received daily at Lloyd's.

It was estimated before the war that not one vessel in 10,000 reached a British port without having been previously reported to Lloyd's. Obviously this system of intelligence requires special care and pains to keep it in its present state of efficiency. It will be readily understood that the intelligence system of Lloyd's is of extreme value to the Naval authorities, who are responsible for the safety of British shipping in every part of the world. The introduction of wireless telegraphy, enabling direct communications to be made, has been of value to Lloyd's system of intelligence, and some of Lloyd's stations are equipped with wireless apparatus. It is hardly necessary to say how highly advantageous to the war is a great organization de

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Oct. 21, 1918.
The weekly meetings are postponed in compliance with the order as issued by the San Francisco Board of Public Health forbidding all public gatherings as a precautionary measure against the spread of Spanish influenza.

Conrad W. Andersson, No. 935, a native of Sweden, age 48. Died at Fort Stanton, N. M., October 1, 1918.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Better and more sensible industrial law is being made each week by the National War Labor Board.

The award announced recently, in the case of the International Brotherhood of Foundry Employes, Local No. 18, against the American Locomotive Co., at Schenectady, N. Y., deals with the "Monday slacker," the right of the steady worker to a steady job through the week, and the question of excessive overtime. Like the award in the case of the Wheeling Mold & Foundry Co., handed down by Justice Clark as umpire, this empowers a joint committee of bosses and employes to decide the point as to when overtime shall be worked.

This Schenectady case is important because the anti-labor crowd in Congress and in the reactionary press has been denouncing organized labor, throughout the period of the war, for the fact that some of the men in war industries would work Sundays at double rates, and then would lay off on Mondays. It was claimed in defense of these "Monday slackers" at different times that the bosses had often failed to provide them with a full week's work.

Here is the substance of the decision:

"1. The regular working time of each full week shall consist of 48 hours, divided into six daily periods of eight hours. All time worked in excess of eight hours within any one day or 48 hours within any one full week, shall be considered overtime and shall be paid for at the rate of time and a half, but any time worked on Sundays or holidays shall be considered extra time and shall be paid for at the rate of double time.

"By mutual agreement between the management and the workers the daily working schedule may be so lengthened as to permit of a half-holiday on one day of each week.

"It is further provided that no worker shall be entitled to payment for overtime or extra time unless he shall work 48 hours in said full week (or 40 hours when a holiday intervenes), except in the case of illness, accident, misfortune, or other just and necessary cause.

"The employer shall grant to each worker who shall be employed on the first day of any week the opportunity to work at least 44 hours in such week, or 36 hours when a holiday intervenes, exclusive of overtime or extra time, and in default of providing such employment shall pay the worker full wages for such hours, exclusive of overtime and extra time.

"Excessive overtime shall not be exacted or permitted. And, in order that the same may be kept within reasonable limits, it is hereby decreed that where in any one day more than two hours' overtime in excess of eight hours is required, then, for that day, overtime shall be paid without regard to whether or not the worker shall, during that week, have worked the weekly schedule provided for.

"2. For the purpose of securing the equitable application of paragraph 1, and adjusting all differences which may arise between the management and the workers in regard to its operation, a permanent committee of four persons is hereby created, two of whom shall be designated by the management and two by the workers, the decisions of any three of whom shall be binding."

Appeal from decisions of this local board to the War Labor Board is provided for, and the award itself may be reviewed, on appeal by either side, at intervals of six months.

The same terms were given in awards on the same day involving the Mason Machinery Co. of Taunton, Mass., and the United Engineering Co. of Youngstown, O.

On Monday there was handed down the ruling of Umpire Clark upon the petition of the Wheeling Mold & Foundry Co. for a rehearing of its case. That award, made by Justice Clark on September 16, established the actual eight-hour day, and laid down the industrial law that henceforth the workers must have equal voice with the management, in industries such as iron molding, in determining whether the men should work more than eight hours in any particular day.

The employers realized that this was a vital blow at their absolute control of industry. Walter Drew, attorney for the National Erectors' Association, was employed by the company to appeal from the award.

His petition was denied.

Justice Clark said that "On a full and careful review of arguments then made and the questions presented by the petition to re-hear, the opinion and the award heretofore made are in every respect confirmed.

"Soon after this opinion and decision of the board had been rendered, and possibly in consequence of it, the great United States Steel Corporation, with 300,000 employes, adopted the eight-hour rule and other companies are doing the same. By reason of its position as a great financial and progressive institution, the action of the United States Steel Corporation marks a distinct advance toward the universal adoption of the eight-hour day, especially if there shall go with it the provision of the award in this case that there shall be no evasion of the eight-hour day upon the declaration of the employer alone of emergency, but the emergency shall be declared by a majority of the joint board appointed by the employers and employes as stated in the award in this case.

"Long since, Mr. Henry Ford, another progressive and successful employer of large bodies of men, adopted voluntarily the eight-hour day, which is the end toward which industry is inevitably and irresistibly moving, by reason of it being justice to the employes and no less to the real interests of the employers and managers of our great industries."

To the suggestion by Justice Clark that his decision may have been the cause of the sudden granting of the eight-hour day by the United States Steel Corporation, labor officials cannot seriously agree. The steel trust magnates, like the German war lords, found democracy rushing at them, in the shape of a nation-wide organizing campaign, and they yelled "kamerad!" The Gary Tribune, published in Judge Gary's steel capital, devotes a page of heavy type to "An Industrial Belgium"—Gary and other steel towns being the Belgium and President Fitzpatrick of the Chicago Federation of Labor and his assistant organizers being the Huns. Fitzpatrick, Foster, Nockels and the whole Chicago Federation crowd are sweeping through the steel trust plants, signing up the steel workers by the thousands, and it was only when faced by the prospect of an organized army of workers that Judge Gary and his fellow-magnates granted a nominal workday of eight hours. And they did not agree that the workers should have any voice in regulating the amount of overtime, either.

Organizing the workers in the Pittsburgh district is not moving so fast. The A. F. of L. representatives in that field have not caught the Fitzpatrick spirit of crusading.

* * *

Among this week's kickers the Longshoremen hold first place. Their grievance is the new "certificate of identification" which the general superintendent of the U. S. Army Transport Service, at the port of New York, has put up to them to sign. About 5000 to 6000 longshoremen are said to be affected. It puts them under martial law.

The document reads:

"I, ———, hereby apply for a certificate of identification as an employe of the United States serving with the United States Army Transport Service. Position ———. I was born at ——— on ———. I was (or was not) naturalized as a citizen of the United States before the ——— court of ——— on ——— as of ——— as shown by the certificate of naturalization.

"I certify that the above statements are correct. I hereby agree that during the continuance of this employment I am amenable to Military Law, and I do hereby surrender my right to Trial by Civil Courts and place myself completely within the jurisdiction of the Military Courts affecting such employment and service. I DO SOLEMNLY SWEAR THAT I WILL OBSERVE THE REGULATIONS OF THE UNITED STATES ARMY TRANSPORT SERVICE AND WILL OBEY THE LAWFUL ORDERS OF MY SUPERIORS AND TO USE MY UTMOST ENDEAVORS TO CARRY SUCH ORDERS INTO EFFECT WITH PROMPTITUDE AND ZEAL."

Description and photograph of the applicant are noted below his signature.

The international officers of the Longshoremen are disposed to ask why this scheme of court-martial discipline of their membership is necessary to-day, when without any such precautions the Transport Service has delivered over 2,000,000 men in France.

* * *

Now that the women in industry have been recognized by the appointment of women to all community labor boards, with full voting power, they are turning their guns on the bigger industrial citadels. They want two places on the National War Labor Board, for example. And they are going to play the most practical sort of politics until they get one or two trade union women upon the executive council of the American Federation of Labor.

Old-fashioned unionism had no patience with the feminist movement. In trades where the women comprised most of the membership, of course some of the officers were women. But when they got into the city central bodies, or the State Federation or American Federation of Labor conventions, the women were lost in the crowd of men delegates. A year and a half of war has changed the whole foundation of the labor movement. Millions of women are taking war jobs. Women organizers are required to bring them into the labor movement. They must be organized, if for no other reason than to safeguard the conditions secured by the men. Women organizers are at a premium. They are going to be a power. The day when they

can be brushed aside, as they were at St. Paul last June, is past.

If the War Labor Board remains for another six months, as it almost certainly will remain, it will have women among its members.

GOVERNORS STAND BY PRESIDENT

Governors of the various States are lining up solidly on President Wilson's platform of a square deal for American Merchant Mariners. This is shown by letters and telegrams received from a majority of State executives by the United States Shipping Board since the appearance of the President's proclamation of October 1 in behalf of merchant sailors.

In the view of the Shipping Board, the President's proclamation, declaring "no more honorable or serviceable task can come to any of our people than that of manning our merchant marine," constituted an official answer to many covert attacks that have been made since the war began on the character and loyalty of American merchant seamen and also on the motives of young men who have been enrolling in large numbers for the training service conducted by the Shipping Board to fit novices for duty in crews of the new national cargo fleet.

The Governors are as emphatically for Jack the Merchant Mariner, whether he be a veteran who has ducked torpedoes, suffered in open boats and survived to sail again, since the war began, or a youth enrolling now to learn the ropes as a merchant man. All praise the work of the Merchant Marine and commend the service to young men. Here are some of their sentiments:

Governor James M. Cox of Ohio: "The United States has need now and will have further need after this war is won, of men who are trained for the operation of ocean-going merchandise carriers, a calling both honorable and remunerative. We must prepare ourselves now that the country may be prepared at all times."

Governor John J. Cornwall of West Virginia: "This war must be won by ships. Ships must be manned by men. Therefore the boys who enroll in the Merchant Marine are aiding in the most pronounced way in winning the war. After the war opportunity will be given the merchant sailor to have a part in the world's greatest commercial era."

Governor Martin G. Brumbaugh of Pennsylvania: "The flag—Pennsylvania-born, dearest among flags, the Stars and Stripes—must fly from a thousand masts in every breeze on every sea. To achieve this we shall need men—real men, with courage and enterprise—to carry American-made products to every market that fronts the sea."

Governor Walter E. Edge of New Jersey: "The opportunity for permanent service in Americanism and a most attractive vocation presented by the new Merchant Marine should appeal to every youth who is in a position to enter this service, or may be in a position following the war. I believe also that the temper of the country is such as to encourage the business-like management of this Merchant Marine to the end that it may become a permanent asset to the country of a very valuable kind."

Governor Westmoreland Davis of Virginia: "I join with you in urging our young men who desire to serve their country in this emergency to enter the service of the United States Shipping Board, for duty in the Merchant Marine."

Governor Samuel W. McCall of Massachusetts: "Marine service after the war is bound to be one of the most important branches of our national development and reconstruction, and the young men now taking advantage of service in the Merchant Marine will obtain an education and experience almost invaluable."

Governor Frank O. Lowden of Illinois: "The young man who now enters the Merchant Marine, which offers the best wages and the most comforts of any marine service in the world, has limitless possibilities and renders patriotic service."

Governor Richard I. Manning of South Carolina: "The Merchant Marine offers to the youth of the country opportunities which should appeal to their patriotism, and at the same time, opportunities for world travel which should and will, I believe, find response in the hearts of red-blooded American youths."

Governor George W. P. Hunt of Arizona: "The United States Merchant Marine offers a clean life for clean boys, on the same old sea, just as chock full of salt and adventure as it ever was. It educates them and trains them and at the same time pays them wages such as never have been dreamed of in the shipping world. If I had a boy who was feeling the pressure of clipped wings I would paraphrase Horace Greeley and say, not 'go west, young man,' but 'go to sea.'"

Governor Julius C. Gunter of Colorado: "The new Merchant Marine affords priceless experience, good pay, advancement and chances for wholesome adventure. What more could a red-blooded American desire?"

Governor Ernest Lister of Washington: "The building up of the Merchant Marine is not only a wartime measure, but also one that will be permanent. The young men entering this service will find it one on which they can remain after the war."

Governor Arthur Capper of Kansas: "One of the most attractive opportunities placed before the American youth in these times of adventurous service of our nation and all the world is offered by the Merchant Marine. In this new and promising field the ambitious American young man can not only render a present service of high value, but can look forward to a career after peace returns that is alluring. I earnestly recommend this career to American young men."

Acting Governor Frank L. Houx of Wyoming: "If I were a young man I would gladly embrace the opportunity for travel, adventure and romance offered by the expansion of the American Merchant Marine, and it is my advice to the youth of the United States to whom the romance of the sea appeals to take advantage of that opportunity to-day."

Governor Charles M. Brough of Arkansas: "The creation of the new Merchant Marine is one of the romances of human endeavor. Its maintenance, during the present crisis and after the war, is going to require the best brawn and intelligence of this country."

Governor Charles Henderson of Alabama: "America's present place on the high seas has been established almost over night. In a few short months we have laid the foundation for maritime supremacy. After the close of the war our merchant fleet will be kept busy carrying our products overseas, and men to move the ships are wanted not only for the present, but for service after the restoration of peace."

Governor J. A. A. Burnquist of Minnesota: "Young men of the country who enter the Merchant Marine service at this time will be performing a patriotic duty and at the same time will have opportunities to learn many things of value in later years, visit interesting places, and gain invaluable experience."

"Mother," said little Anthony, "did you tell father I wanted a new bicycle?" "Yes, dear," said his mother, "I told him, but he said he couldn't afford to buy you one." "Of course, he'd say that. But what did you do?" "I told him how badly you wanted it and argued in favor of it, but he refused." "Argued? Ah, mother, if it had been something you wanted yourself you'd have cried a little and then you'd have got it."

Demand the union label. If you are the right sort of a union man one suggestion of this sort is all that is necessary.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

ning the war is a true and steady aim for reaping the fruits. For this service we have to thank, above all other living men, the president of the United States. Thus it is that in all the allied countries, above all in our own, the people have come to see in him their natural leader—a man who represents their best thought and true purpose.

"In admitting and acclaiming this, no reflection is implied on the statesmen of any other country. President Wilson has never posed as a heaven-sent instructor. He claims no vast superiority of insight or knowledge, but comes forward as giving voice and coherence to the feeling and desire of plain man."

Support Porto Ricans.

Santiago Iglesias, president of the Free Federation of Workingmen of Porto Rico and A. F. of L. organizer, was the principal speaker at a mass meeting held under the auspices of the Pan-American working men's committee of New York. A majority of the men and women present were from Spanish-speaking countries.

Hearty indorsement was given the meeting of North American and Latin American trade unionists at Laredo, Texas, November 13 next.

The meeting instructed a committee of seven to arrange for "a great assembly of all the labor unions and representative groups of the Latin-American republics and Spanish-speaking citizens of all the countries of the world," in New York in support of the Laredo conference.

In his speech Santiago Iglesias explained conditions in Porto Rico and the efforts of these workers to secure economic and political justice. The meeting resolved:

"That the meeting approves and supports in all their entirety the complaints and protests made by the Free Federation of Workingmen of Porto Rico before the Washington authorities on account of the cruel treatment accorded to them, and that the Porto Rico authorities be acquainted with this action."

Protect the Unborn Says Labor Editor

Miss Daisy Maude Eager, in charge of the women's division of the Government Employment Service in Portland, Ore., wants to recruit women for shipyards, but her enthusiasm is not shared by C. M. Rynerson, editor of the Oregon Labor Press.

"It is hardly believable," he says, "that a woman occupying the position which Miss Eager holds would seriously advocate any such measure, but it is gratifying to learn that at least one shipyard has refused to accept her offer to furnish women for shipyard work, even though there is a serious shortage of common labor in that yard."

The editor calls attention to the efforts of some employers to place women in all kinds of men's work, "but," he says, "it was hardly to be expected that a member of their own sex would advocate women entering hazardous industries, where not only their own health would suffer from the nature of the work, but the very future of the race would be imperiled by reason of their engaging in work which requires the strength and endurance of able-bodied men.

"While this is a time when all are called upon to make sacrifices and suffer inconveniences, the exigencies of the occasion do not demand that we sacrifice the mothers of the coming generation and the right of such generation to be born of mothers who have not spent the strength and health of the unborn in industrial employment.

"There are many places where women may be usefully employed where they will not overtax their strength and fall prey to the ailments peculiar to their sex. There is no excuse for their employment as common laborers in shipyards and like industries."

THE MINERS' WAR WORK.

Splendid records made by patriots who toil at dangerous tasks underground to win the war.

While battles are fought by our soldiers over in Europe it is easy to forget that the first which flames from cannon and gun, from shell and bomb, is really kindled by the men who are working faithfully day by day in the coal mines of the United States. President Wilson has said of these men that "the work of the world waits on them," and now has come the moment in history when the war depends on them.

All the machinery which moves armies, and then supplies them with the means of fighting, demands fuel. According to estimates made by the United States Fuel Administration, every time a 15,000-ton troop ship carries American soldiers to the fighting front in France it consumes 3000 tons of coal. This means that each ton of coal sends two soldiers overseas. For the transportation of food and all the endless consignments of munitions 4,000,000 tons of coal will be required in a year, while the shipbuilding program demands 14,000,000 tons of coal to manufacture and to transport the steel used in ship construction. And for every ton of shipping that leaves the ways five tons of coal will have been burned during the building process.

In the coal year from April 1, 1918, to April 1, 1919, there must be supplied approximately 735,000,000 tons of coal and a gap of 80,000,000 tons between this year's production and that of last year must be bridged. As the output for 1917 was 64,000,000 tons ahead of the production of 1916, there is an imperative demand for 144,000,000 tons more than the normal output.

Less than 600,000 miners are now actually bearing the greatest responsibility that has come to any class of workers who are giving their strength to the winning of the war. To them has been presented a gigantic task that must be accomplished with the handicap of greatly reduced man power, and they are accomplishing what has seemed impossible. They have broken all previous records in production, although thousands of their comrades have gone into the Army and the Navy.

Before the first draft approximately 700,000 mine workers were employed in the United States. Then the war took about 15 per cent. of the workers, for a large number volunteered, in addition to the loss by draft. Men accustomed to danger went to war with the courage of long experience in daring death. Thus, with greatly increased demands upon them, the mine-workers of the country found themselves hampered by reduced numbers.

In the first three months of 1918, despite the most patriotic effort, figures showed that 1,400,000 tons less than in the same period of 1917 had been produced. Bad weather was the principal cause of this disappointment. The United States Fuel Administration studied the report for the quarter and made earnest appeals to speed up.

But the mine workers needed no urging to do their best in what President Wilson has called the "great service army." Increased production became the watchword and enthusiasm spread from Pennsylvania to Indiana, from West Virginia to Illinois, from Texas to Colorado. In every State where mines are located men fell to work with supreme energy.

Miners who had been working part time on account of age or physical disabilities ceased to spare themselves. Many who had made enough money to support them in old age gave up their well-earned leisure, and appeared again in the early morning lines of workers that moved toward the blackened buildings above shaft and tunnel. At Stonesboro, Pa., where the Mercer Iron and Coal Company mines are the oldest in the district, 150 men who had retired from the service of the company after accumulating substantial savings, volunteered to take up pick and shovel again. The older workers were assigned to a new opening on the mine, which was not yet connected with a railway spur, but while waiting for the siding to be completed they mined 4000 tons of coal.

Frank J. Hayes, President of the United Mine Workers, made a tour of the anthracite mining fields, in July, for the purpose of appealing to mine operators as well as mine workers to increase production, but he found that there was no lack of appreciation of the opportunity to serve the country with pick and shovel as well as with rifle and bayonet.

The new draft will further reduce the number of mine-workers, and every day will increase the consumption of fuel. Thus the men who are toiling underground bear each day a heavier burden of responsibility. They know that failure on their part in this period of supreme crisis means disaster to the Nation and to the whole world, and so they are giving their full energies, their whole time, and their best efforts to their country, which must recognize their service in the war as not less important than that which is given by the soldiers. When history is written the heroes of the coal fields will receive their share of praise with the heroes of the battlefields.

A Los Angeles butcher recently got the shock of his life, but was equal to the occasion. A patron, obviously looking for something to kick about, demanded: "Do you sell diseased meat here?" "Worse," replied the butcher, blandly. "What do you mean, worse?" demanded the truculent patron. "The meat we serve is dead," confided the butcher in a stage whisper.

LLOYD'S AND THE WAR.

(Continued from Page 7.)

veloped from small beginnings, and conducting a colossal business in the affairs of the sea, which is still known, and will always be known, by the name of "Lloyd's."

"MANY THAT ARE FIRST SHALL BE LAST; AND THE LAST SHALL BE FIRST."

(Not a Sermon.)

Progress is the FORWARD MARCH of time, and TIME is the wonderworker of the world. For five years, the world was peaceful and industrious, with two of the central powers of Europe convalescing from the aftermath of war, to-wit, Austria-Hungary from the Balkan, and Russia from the Russo-Japanese war.

Busy people had forgotten all about war.

The world was full of bustle for industrial advantages. Labor was clamoring for its due, and capital was usurping more than its share.

Power is ambition's lust, and the lust of power is found not only in the lion but in the very worm that crawls.

Democracies have their Tories; Aristocracies have their Yonkers. In every democracy are those who prefer a monarchy, and in every kingdom may be found those who would like an absolute monarchy.

So, five years ago, we found Europe infested with the tapeworm of Kaiserism, keeping it hungry, in tapeworm fashion, emaciating the very body within which it lived, growing, feeding itself.

Thus, the great war, the greatest war in the history of the world, was started.

Every effort to expel Kaiserism from Europe failed. It had grown so large that it was fast devouring Europe, and Europe paid homage at its feet.

Had Kaiserism stayed within its own jurisdiction and field, it might have been the conqueror of the world, but the Kaiser, intoxicated with his own exuberance in the belief that he was the "Gottman" and his people the superpeople of the world, got funny, real funny, and seemed to think that he could reach out and gobble up the world. So he slapped Uncle Sam on the cheek and sunk the Lusitania. Uncle Sam, in good Jesus fashion, turned the other cheek, but the Kaiser slapped him again and sunk the Arabic. Still Uncle Sam, in Christian spirit, turned to him the right cheek once more, and again the Kaiser slapped it by sinking the Ancona. Uncle Sam stayed Christian as long as he could, but when the Kaiser sunk the Sussex, it dawned upon Uncle Sam that Jesus in His Sermon on the Mount had never forgotten the precepts of Moses,—An eye for an eye, and a tooth for a tooth, a limb for a limb, and a life for a life. Then he turned to the Kaiser and said:

"You have slapped me often enough. Now stop it."

But the Kaiser went on slapping with his U-boat, and Uncle Sam, rolling up his sleeves, put his sword in its hilt, his gun on his shoulder, and this snake champion of the world who laughed at peace, who wanted to conquer the world by the sword, who mocked at the teachings of scripture, who slapped cheek upon cheek, is now, in Caesar fashion, crying:

"Help me, Peace, or I sink." But there is no Cassius, not even the Crown Prince or Hindenburg, to save the Kaiser from the Tiber of his own destruction.

Down he shall go until there shall be no more Kaisers, until PEACE shall triumph in the spirit of real people, and the teachings of a world's humanity shall rule the world!

JOHNSON ON HEALTH INSURANCE.

Senator Hiram Johnson, although he came to California for a complete rest and announced that he would not take any part in politics, has not been able to refrain from putting himself on record on the Social Health Insurance issue. He has issued the following statement to the voters of California:

"Of course I am heartily in favor of Social Health Insurance. It is the kind of policy I should have been delighted to present to Californians, and I regret that I am unable to take part in the campaign for its adoption. Our old individualistic democracy of every man for himself and the devil take the hindmost is gone forever.

"The opponents, in derision and denunciation, say this is a German policy, but its conspicuous success has been in England and its most enthusiastic advocate has been the great democratic statesman of Great Britain—Lloyd George. Certainly, we should not fear to follow in the footsteps of Lloyd George nor to accept the demonstrated experience of England.

"The two outstanding progressive issues of the immediate future are public ownership and social insurance. The first must come largely from national action, but social insurance must be initiated by the States.

"In 1910, California led all the States of the Union in proposing an adequate workmen's compensation act. When this act was first undertaken, the denunciation and misrepresentation concerning it were somewhat similar to the present denunciation and misrepresentation of Social Health Insurance. Ninety per cent. of the opposition to the Workmen's Compensation law arose from misrepresentation just as ninety per cent. of the present opposition to Social Health Insurance does. The Workmen's Compensation law vindicated its advocates and justified itself after it became operative, and met with the commendation of both employer and employe. In like fashion, if adopted, Social Health Insurance will justify itself and vindicate its advocates.

"The policy is as certain to come as that the world progresses. It is more certain to come because of the very war in which we are engaged. The tremendous and as yet little understood changes in our social and economic life which the end of the war will bring will make necessary and certain policies like health insurance.

"I wish to express my absolute confidence in the Social Health Insurance Commission and am sure that it will present to the Legislature a rational and proper bill meeting all the objections which have been sought to be raised.

"Have we vision enough clearly now to see and courage enough to lead in this humanitarian measure of demonstrated efficacy? The progressivism of California which I knew in the past preferred to fight for and to lead in measures of this sort rather than in the far future tamely to follow.

"(Signed) HIRAM W. JOHNSON."

It must not be assumed that the child who receives its only education while tending a machine will necessarily develop a machine-like obedience to driving power.

Labor News

The Central Labor Council of Seattle asks the Government to establish a rental office that will replace private rental agencies. The proposed institution would operate and have power to commandeer hotels, houses, apartments and lodging houses.

The Washington State Welfare Commission has rejected the plea of hotel men that the recently established minimum of $13.20 a week for women workers be based on a seven-day week. The new rate will take effect within sixty days if the hotel men conclude not to go to the courts.

Senator McKellar's bill to pension employes in the classified civil service of the Government has been reported favorably by a Senate committee. A similar bill has been introduced in the House by Congressman Keating. This legislation, which is indorsed by organized Government employes, provides that a certain percentage shall be deducted from salaries to help create a pension fund and the Government shall contribute a share.

Representatives of the Federal Department of Labor have ruled against the employment of women as conductors on street cars of Cleveland, Ohio. The investigators found that local labor conditions do not demand this condition. The investigation was the result of differences between the company and its employes. The latter insisted that there was not a man shortage sufficient to warrant the employment of women and this has been upheld by the Government's representatives.

At a convention of recently-organized miners of the Fairmont (W. Va.) district an agreement entered into between their officers and coal operators was ratified, and for the first time in the history of that field trade unionism is recognized and the guard system is abolished. Gun men and thugs have lost an easy living because of the continued agitation of these workers, whose fight against injustice has attracted nation-wide attention. The agreement affects 15,000 miners.

Full voting power has been granted to the two women members of the Community Labor Boards. Originally their voting power was restricted to questions concerning women; but in response to the strong protest made by women the restriction was removed. The Department of Labor also announces that in addition to the two women appointed to the Community Labor Boards, two women will be placed on each State Advisory Board of the service. Heretofore these boards have been composed of men.

The Executive Board of the California Oil and Gas Well Workers' Union, representing 15,000 employes in oil fields, pipe lines and refineries, asks the Federal Oil Conciliation Board to order wage increases of $1 a day. This would establish a $5 minimum for common labor, $7 for the comparatively few tool dressers, $6.25 for engineers and $9 a day for drillers. These rates have been ratified by the union, whose officials announce that the question of strike was "absolutely given no consideration, as the oil workers depend exclusively on the sense of justice that actuates the Department of Labor in its operations with essential war industrial employes."

INFORMATION WANTED.

The members of the crew of the S. S. "Grayson," who rendered salvage services to the "Lowther Grange," will please communicate with S. B. Axtell, 1 Broadway, New York, N. Y., for their share of salvage money. 1-30-18

The men hereinafter named are requested to call personally or communicate with J. T. Smith, 112 Market St., San Francisco, Cal. Chas. Fraser, W. Holmes, Otto Kanka, Karl Olsen, William B. Pierce, Thomas Wolstenholme. 10-2-18-Adv.

Hans Herman Hansen, a native of Bornholm, Denmark, about 30 years of age, last seen at San Francisco, Cal., in 1914, is inquired for. Any one knowing his whereabouts please notify his sister, Mrs. Marcher; address, Modesto, Cal. 3-20-18

The Public
An International Journal of Fundamental Democracy

A clever man said that when people speak of "habits" they refer to bad habits only. As a matter of fact habits are both good and bad. Personal progress is largely a matter of good habits. Reading "The Public" is a habit which thousands of alert minds practice. Why not cultivate this invigorating habit yourself?
References: Lincoln Steffens, Brand Whitlock, Judge Ben B. Lindsay, Ray Stannard Baker, and you—after you have tried it.
Introductory Offer: Three booklets on the Singletax and 10 issues of "The Public" only 25c.

INFORMATION WANTED.

An appeal has been taken by the owners of the Bark "Portugal" from the decision of the Federal District Court in the matter of salvage award of $30,000 recently made and referred to in these columns. The determination of this appeal may be a matter of six months. Seamen who wish to get their money as soon as possible should communicate with Silas B. Axtell, Attorney, One Broadway, New York, in order that I may send them a power of attorney form to be signed, which will be required by the court before the money can be paid out. The crew, of course, are sure to get some money and they will probably get their portion of the amount awarded by the lower court. It seems quite possible that the decision of the lower court will be affirmed. 7-24-18

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

When making purchases from our advertisers, always mention The Seamen's Journal.

You Want the Truth
This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.
LA FOLLETTE'S MAGAZINE
will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.
Send in your order today.

INFORMATION WANTED.

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City. 6-5-18

All members of the crew of the S. S. "Brazos," who were on board on March 11th, 1918, at the time she salved the S. S. "Iroquois," near San Domingo, will please communicate or call at the office of Silas Blake Axtell, 1 Broadway, New York City. 6-5-18

William O'Keefe, who has not been heard from in many years, is inquired for. His niece, Catherine Lynch, aged 12, is very anxious to locate him. Anyone knowing his whereabouts, please notify Catherine Lynch, 42 Monroe Street, New York City.

Home News

Liberty motors now have reached quantity production and American-built airplanes are being shipped in trainload lots daily from the factories for service overseas.

The law department of Jersey City announces its intention of publishing a "blacklist" containing the names of landlords who refuse to lease to tenants with children.

Failure of relatives of soldiers overseas to notify the War Department of changes in their addresses is causing delays in the delivery of telegrams giving notice of casualties. The War Department asks that all persons recorded as the next of kin of soldiers notify the Adjutant General's office promptly of any change in address.

D. C. De Hart, a member of the aerial mail service, recently made the trip from Washington to New York, a distance of 226 miles, in two hours and twelve minutes. He made the flight from Philadelphia to New York, a distance of 90 miles, in forty-nine minutes. De Hart used one of the smaller Curtiss planes and carried 210 pounds of mail.

The First Assistant Postmaster General has notified postmasters at city delivery post offices that the inspection of winter uniforms for carriers should be conducted on lines of conservation by providing for the usage of as many uniforms worn last year as possible. Uniforms or parts of uniforms, including caps, that can be cleaned and repaired and placed in respectable appearance should be reworn rather than require the carrier to purchase a new uniform.

The Logan Coal Company of Philadelphia has been ordered by the Fuel Administration to pay $25,000 to the Red Cross as a fine for profiteering. In addition, the company has been ordered to give to the Red Cross all its profits between September 15 and October 1, refund to all purchasers of smithing coal the difference between the Government price and the price which it charged, and deliver to a State institution, with which it made a two-year contract, coal at the Government price.

Able-bodied men over draft age can be made skilled workers in training schools now maintained in many large factories, says the United States Employment Service Bulletin. "The war has proved that age is not a bar to the attainment of efficiency in a new trade," says this Government publication. "The man past 50 has come back to renewed usefulness in lines of work never previously tried and from all parts of the country reports are proving his great possibilities including most lines of essential industry."

A British educational mission has come to this country to inquire into the best means of obtaining closer co-operation between British and American educational institutions, in order to increase the sympathy and promote understanding between the countries of the English speaking world. The members of the mission are: Vice Chancellor Arthur Everett Shipley of the University of Cambridge; Vice Chancellor Sir Henry Miers of the University of Manchester; the Rev. Edward M. Walker, Fellow of Queen's College, Oxford; Sir Henry Jones, professor of Moral Philosophy, University of Glasgow, and Dr. John Joly, professor of geology and mineralogy in Trinity College, Dublin.

BUY WAR SAVINGS STAMPS

Domestic and Naval

The State of Maine is coming back to her one-time glory as a shipbuilding center. At the present time there are under construction in Maine ship yards 116 vessels, eight of which are steel. An aggregate of 72,600 deadweight tons—forty-one wooden freighters; 47 schooners; tugboats, lighters and trawlers.

Plans for the Henry Ford submarine chaser manufacuring plant on Lincoln Highway, in Kearny, N. J., have been filed with the Building Department. The main building will be 860 feet long and 330 feet wide, built of steel, brick and concrete. The boats will be launched into the Passaic River. Work on the unloading sheds has been started. The plant is opposite the United States Engineering depot and adjoins the Federal Shipbuilding yard.

Seventeen new shipping and shipbuilding firms were organized during the month of August with an authorized capital of $11,200,000. This brings the grand total for the entire war period up to $453,404,000. Of the August total $3,625,000 went into the actual building of ships, while $7,575,000 was the amount devoted to the operation of vessels. The August total compares with $10,730,000 in July, during which period thirty-two new shipping companies were formed.

The Department of Commerce is endeavoring to locate Harry M. Beachy, an American seaman, who was awarded by the British Government a silver medal in recognition of the part which he had in saving the crew of the British schooner "Busy Bee." Mr. Beachy was born December 22, 1894, either at Baltimore or at Grantsville, Md. Every effort to locate Beachy has been made, but so far without success. The medal is now being held in the department in the hope that some trace of Beachy may be found.

The certificate of Captain Charles E. Dagwell has been suspended during the continuance of the war as a result of the inquiry into the loss of the schooner "Dornfontein," destroyed by a German submarine off the mouth of the Bay of Fundy August 2. The reason for the suspension is that the captain handed over to the commander of the enemy submarine his secret sailing orders, making no attempt to destroy them, notwithstanding the peremptory orders he had received. Although the crew was of mixed nationality and two of the members spoke German, the court was unable to connect the disaster with any prearranged signals or notification to the enemy.

The annual report of the American Shipbuilding Company, Chicago, discloses that the company during last year built at its various yards forty-five cargo boats of 168,800 gross tons, besides two United States naval vessels. The company has contracts with the United States Shipping Board for the delivery of 172 standard type ocean-going vessels of 678,700 gross tons, for delivery between July 1, 1918, and close of lake navigation November 15, 1919. Construction work is now well ahead of schedule. During the year appropriations for plant extensions necessary to obtain increased production aggregating $6,125,057 were authorized and of this $4,781,992 was expended.

OVER THERE
and
OVER HERE

Thirty-five of our young men, recently graduated from the University of California as dentists, heard duty's call, joined the Army and Navy and are OVER THERE.

In the meantime—

OVER HERE—While the nation is at war Amendment No. 21 has been initiated to open wide the doors of California and let in the riff-raff from every back-woods State to practice as dentists without examination.

Yet, when our boys come back—if they do come back—they must compete with the derelicts and incompetents who would come in without examination—unless this measure is defeated.

There can be but ONE ANSWER.

Vote NO On Amendment **No. 21**

Joint Committee, California State Dental Associations.

News from Abroad

A Batavia, Java, news agency despatch to the Dutch newspapers says that six German steamers—"Silesia," 4489 tons gross; "Uhenfels," 5577 tons; "Gernis," 6500 tons; "Westmark," 5870 tons; "Castell Pelesch," 3464 tons, and "Linden," 4187 tons—have been transferred to the Rotterdam Lloyd, the Holland-American to replace six torpedoed Dutch ships. All the steamers at present are in Java ports.

When the war began in 1914 a man named Godfrey Jones, a coal miner in Wales, enlisted as a private. He soon became a non-commissioned officer, and a little later earned a commission. At Saloniki he showed such conspicuous courage that he was awarded the distinguished order service. The other day Colonel Jones, still serving with his countrymen and in command of Welsh soldiers, was promoted to the rank of brigadier general. The coal miner now outranks the heir to the British throne.

The American reply to the German peace offensive was in somewhat plainer language than usual. The Germans were told there could be no negotiations of any sort with the Hohenzollerns. If the Kaiser's subjects were prepared to remove the offending autocrat they would be heard, but even they were told there could be no alternative to unconditional surrender. The American message was greeted with warm approval in France, England, Italy, Belgium and other allied countries, while the American press and American statesmen were much more enthusiastic than they had been in regard to the first United States reply to Germany.

The largest dock in the Mediterranean is to be constructed near Naples. A decree has been signed conceding to that city the right of carrying on the necessary constructional works in the harbor of Baia. Among the minor undertakings will be the transformation of the Lake Averno into a marine basin, with a large industrial zone adjoining, the construction of an outer harbor in the Gulf of Baia and of a communicating canal between this harbor and the lake, with a quay provided with all the latest appliances. The total cost is not to exceed 50,000,000 lire, to which the State will contribute 22,000,000 lire in fifty annual instalments.

During the week the Belgian coast has been cleared of the enemy and where but recently were submarine bases we have now places for anti-submarine operations, and, better still, we have a point of direct contact with Holland. That hitherto timid neutral may now speak with all the courage of its neutrality, if so disposed. No longer can Holland be browbeaten by Germany unless she enjoys or endures the experience as the price of profitable trade. The Germans are now evacuating Belgium so rapidly the allied armies have difficulty in maintaining contact with the retreating enemy. As the loss of Bulgaria shattered the dream of Mittel-Europa, the loss of the Belgian ports means the loss of the plans for the conquest of England, which, as a mater of fact, Germany did not really plan to achieve during the progress of the present war. That was to be reserved for yet another war, which, in turn, was to be preliminary to the final war which was to give Germany complete world dominion.

With the Wits

Cheering Them Up.—Freckles are the farmerettes' service stars.—Boston Transcript.

His Master's Voice.—Captain (sharply)—"Button up that coat."

Married Recruit (absently)—"Yes, my dear."—Tit-Bits.

Not So Loud.—"Sleep is one of the greatest of luxuries."

"For heaven's sake, don't say that or they'll tax it."—Baltimore American.

As London Sees It.—The American Rainbow Regiment is at the front—an augury, of course, that the present reign will soon be over in Germany.—London Opinion.

The Airplane Chicken.—Aviator—"Here, take this chicken away—"

Waiter—"What's the matter with it, sir?"

Aviator—"It's all wings and machinery."—London Opinion.

First Essential.—"How would you like to sign up with me for a life game?" was the way a baseball fan proposed.

"I'm agreeable," replied the girl, "where's your diamond?"—Indianapolis Star.

The Quip Sprightly.—"You there in overalls," shouted the cross-examining lawyer, "how much are you paid for telling untruths?"

"Less than you are," retorted the witness, "or you'd be in overalls too."—Boston Transcript.

Peace Danger.—"I don't know about these war inventions when peace comes."

"What about them?"

"These aviator fans may go about in baseball times bombing the umpires."—Baltimore American.

The Difference.—"It is remarkable that so many women should be working."

"Women have always worked," replied Miss Cayenne. "The principal difference just now is that they are working away from home and getting paid for it."—Washington Star.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 8. SAN FRANCISCO, WEDNESDAY, OCTOBER 30, 1918. Whole No. 2510.

WAGES VERSUS FINANCES.

Frank P. Walsh Dissects "Wage Fixing" Theories of Reactionary Employers.

In many cases presented to the War Labor Board the attorneys and representatives of the employing corporations urge that, regardless of the essential fairness of any wage increase that might be awarded by the Board, the financial condition of the concerns would be impaired thereby and that the Board should consider this possible result in fixing rates of wages for the workers.

Under the principles and policies to govern relations between workers and employers in war industries for the duration of the war, as adopted by the Government in conformity with the proclamation of the President of date April 8, 1918, the powers and duties of the Board are clearly defined.

The underlying object of its creation is that "the maximum production of all war industries should be maintained." To this end, therefore, of course, all existing wage standards must be maintained. Where wages were fixed by contract between organized groups of employers and employees, and the same are found by the board to have been fair at the beginning of the war, it becomes the duty of the Board to ascertain, by careful investigation and research, the increased cost of living, as well as the advance, if any, which would ordinarily and naturally come about in times of peace, which sums must be added to the pre-war wage.

Adjusting Pre-War Wage Standards.

Where wages, however arrived at, are found not to have been fair and adequate at the time our country entered the war, proper basic standards are established, to which the last foregoing elements of increase are added.

Supplementary to these considerations, it may be noted that the President's proclamation also imposes the following definite and specific direction upon the Board:

"In fixing wages, minimum rates of pay shall be established which shall insure the subsistence of the worker and his family in health and reasonable comfort."

This provision, it has been found in experience, required a substantial increase in the wages of all of the common laborers which have come within the jurisdiction of the Board, with the possible exception of building laborers and a few other industries. The evidence in many cases shows that numbers of skilled and semi-skilled mechanics also, by right, invoked the principle of the living wage on account of the inadequacy of their compensation to meet this just requirement of the government.

Giving effect to the foregoing duties and limitations imposed upon it by the proclamation of the President, the Board, after mature deliberation, in a large number of cases unanimously applied the foregoing rules and principles, and accordingly held that the financial condition of the employing corporations was entirely irrelevant under the principles proclaimed by the President, and would not be considered if proposed increases of pay to workers were just and proper.

The Plea of "Financial Inability to Pay."

Obviously, to have regard to outside considerations, such as are involved in the claim of financial inability to pay, might entirely defeat the wage-fixing function of the Board by proof that even a fair wage could not be paid to employees without financial detriment, or that a minimum rate of pay, "insuring the subsistence of the worker and his family in health and reasonable comfort," would be confiscatory.

If a workman engaged in an essential industry is expected to perform his part uninterruptedly in necessary war production, it will not do to say to him, upon presentation of his just demands, that the tremendously increased expense of fuel and raw materials has been taken into account by his employer and paid in full, but that the legitimate increase in the cost of labor must be ignored, even though it means deprivation and suffering to him, to say nothing of the menace to his family life; or, that his employer has not looked ahead to the inevitable rise in labor cost as he has to the cost of fuel and materials, and that the worker must bear the burden of this lack of foresight; or, that the employer has entered into fixed contracts, based in part upon the rate of wages being paid at the time of the making of the contracts, thus relieving the consumer of the legitimate addition to the cost of the product on account of the war and again thrusting the burden upon the underpaid worker; or, that the worker should be called upon (a) to use up his pre-war savings, (b) to take his children out of school and place them in industry, (c) or to receive aid from charitable and benevolent sources for the upkeep of himself and his family while the war is being prosecuted.

A state of war is recognized by all as an "extraordinary emergency," and this is true even though it extends over a very great period of time. And it is an emergency which calls, among other and mightier changes, for revision and reformation of contracts, the readjustment of prices to the consumer, and changes of the most fundamental character in the organization and operation of industry, even to the commandeering and control of private enterprises by the Government itself, when found necessary and expedient.

Proper Readjustments for Employers.

To prevent injustice, the Board, where substantial increases have been made, has unhesitatingly recommended increases in the rates of public utilities, as well as price readjustments in existing contracts with the Government or private individuals or corporations, so that the ultimate consumer might not shift the burden, fairly his, to the back of the worker or his employer.

Moreover, another argument frequently urged by employers, i. e., that the amount of increase in wages is added directly to the expense of the concern and must result in an equal diminution of profits, is in the main, fallacious.

It is based upon the assumption that the employer is to pay a higher price for the identical character and the same amount of service. That this assumption is erroneous has been conclusively proven by many generations of industrial experience. Workers who are ill-treated by their employers and not sufficiently compensated to enable them to maintain a high degree of efficiency, render one kind of service, usually poor and halting. Employees who are adequately paid, hence in sound physical condition and mentally alert, render an entirely different and improved quality and amount of service. Experience has proven that the increase in the amount of service rendered and its improved quality compensates, if it does not entirely offset, the increase in the mere monetary wage.

Some of the largest of our nation's industries have in the past voluntarily made large increases in wages, against the protests of business competitors, associates, and even economists, the prediction being that the effect would be the financial prostration of the industry. The immediate and practical results, however, completely refuted these forebodings, for the expense per unit of product was materially decreased as a result of better service rendered, and the profit of the employer showed corresponding increases.

Beneficent Results of an Adequate Wage.

Contributing to this beneficial result may be mentioned, among other factors, the immediate decrease in the "turn over," which means the constant hiring of vast numbers of workers to take the places of those who leave the employment, unable to continuously maintain themselves and families on an insufficient wage.

It is conceded by all enlightened employers of labor that there is not only a large direct cost in training new recruits in an industry, but that there is a marked diminution of product due to the induction of new and untrained workers into a manufacturing plant. A comparison between an industry which maintains a steady and efficient labor force by providing equitable conditions of employment and an industry in which the labor force is constantly shifting because of inadequate wages or other onerous conditions, would, we believe, show the same differences in efficiency as would appear in the comparison of a well-fed, well-drilled, carefully equipped army of veterans, and a collection of nondescript troops for whose subsistence, equipment, training and general welfare no governmental provision had been made.

For the Government to adopt the suggestion of employers that the state of their finances should be considered in fixing wages would be, in many instances, to abandon large sections of its industrial army to the ravages of poverty, with its inevitable train of ills and sufferings, a policy unthinkable if we are to win the war of freedom for the world, which we must and will. —Frank P. Walsh, Joint Chairman, National War Labor Board.

MORE PRAISE FOR FURUSETH.

Editor, SEAMEN'S JOURNAL:

Silas B. Axtell's letter and suggestion is timely and gracious.

When I was secretary of one of the eleemosynary institutions Andrew Furuseth came into my office, unbidden, and made some very candid criticisms of our work. He won my heart and admiration at our first interview. I laid the plans of the Seamen's Institute at 507 West street before him, and he made valuable suggestions.

On my first visit to the Pacific Coast he came into the editorial office of the SEAMEN'S JOURNAL when I was discussing things with Walter Macarthur. He opened my eyes to the necessity of the Seamen's bill and revealed to me personally that it would solve many of the problems of the seamen's chaplains on the waterfront, kill crimping, put the illegal boarding-house keepers out of business, and help the sailor at the point where many of his troubles began, namely, at his pocket. Seafarers needed Seamen's institutes then, they needed the spiritual advice and help of the seamen's workers; but before all that justice should be done. Legal aid was good—they needed it; but better laws and justice were more urgent.

When Havelock Wilson and Thomas Chambers came to New York to organize the British seamen, I lent them the Seamen's Institute Hall at 507 West street, where they held meetings for a year, and organized the men. Andrew Furuseth came frequently to speak. His addresses were always pitched on a high ethical level and had a statesmanlike quality all their own.

"I saw the plans; now I see the building," he remarked to me after his first visit.

He always urges the men to patronize the Seamen's Institutes, recognizing their value to the seamen. While he freely criticizes some of their methods, and in no way endorses their programs in their entirety, his help and influence on their behalf is incalculable.

From 1912 until 1914, while writing a series of articles in the Survey on seamen and their problems, I found his suggestions rich and helpful. And it will always be a matter of pride and gratification to me that by pen and voice I had a small share in helping to put on the statute book Furuseth's Seamen's bill. For in reality it is his work.

Andrew Furuseth's personal integrity, honor and single-mindedness have been a valuable asset to the Seamen's Unions and the labor movement in America.

Casually I said to Captain Dollar of San Francisco (we were on a New York elevator):

"Do you know Furuseth and Macarthur?"

"I've fought them for twenty years," he exclaimed.

"Are they straight fellows?" I asked, wishing to know his opinion. My own opinion was formed.

"Straight—yes; that's their strength."

Splendid tribute from an opponent.

His ability as a writer and speaker is of the highest order. Only yesterday I passed a steel plant (steel can be spelled two ways) and saw some labor members giving out handbills for a meeting. In conversation with the delegate he paid tribute to Furuseth's skill in analyzing a situation.

In marine history, laws, and shipping conditions of America and the world, he has no peer. His mental powers, naturally good, have been strengthened by hard study. A fearless advocate, a fair fighter, a strenuous propagandist, a keen debater, and a faithful friend of the seamen of the world, he is the great figure and the noble leader that seamen's unions have produced. Without disparagement to the other strong, able men in the cause, as an outsider—one looking on from the other side of the fight—the emancipation of the seamen is Furuseth's work. His associates are generous enough to acknowledge his leadership.

All the evidence and testimony submitted in committee on the Seamen's bill I read at the request of a magazine editor. Wearisome, dry reading it was. The repetition and revamping of obsolete arguments, dragging out and redressing of the "bogey man argument," "American shipping will be killed," was surprising; the narrow parochial vision of steamship men and chamber of commerce advocates was staggering. How they failed to see that the Seamen's bill was really a help to American shipping was a constant puzzle to me.

Furuseth's infinite patience and tact was constantly demonstrated. The bill should have won on its merits; it did win by the leader's foresight, personality and political strategy.

There is much more I could write from personal knowledge, but I have paid my tribute and write cordially endorsing Mr. Axtell's suggestion, and promise my subscription of the maximum sum.

Every seamen's mission, chamber of commerce, ship owner and seaman should pay their tribute to the seamen's friend, Andrew Furuseth. Yes, let us have some public monument. Cordially yours,

REV. GEORGE MCPHERSON HUNTER.

Dover, New Jersey, Oct. 22, 1918.

LAUNCHING OF CONCRETE SHIPS.

England is turning out stone ships. At both Barrow-in-Furness and Barnstaple a concrete vessel of 1000 tons was launched for the first time on September 21. At Barrow, the first of ten concrete barges was launched by the Ferro-Concrete Shipconstruction Company, Ltd., from the Graving Dock Shipyard. This yard was formerly the site of the yard of Caird & Purdie, where merchant steamers were built. The concrete barges are being built on the Hennebique system of reenforced concrete construction, and are to comply with the Board of Trade requirements and Lloyd's Register classification. Their measurements are 180 feet in length, 31 feet in breadth, 19 feet in depth and loaded draught of 15 feet. Steamers are also under construction in this shipyard.

At Barnstaple, the same day witnessed the launching of the first concrete ship built there for the Admiralty, the company present including Admiral de Lorenzi, Italian naval attache, and Colonel Ernest Ferretti, constructor to the Italian Navy. It was only on March 25 that Mr. Percy Westacott, the builder, and principal of the British Construction Company, London, received the order to begin operations, and although the yard itself had to be made, the vessel has been cnostructed in four months. This is a record for concrete shipbuilding in the country. Another keel was to have been laid down within 48 hours on the same shipway. Other vessels are already under construction and it is hoped shortly to begin launching one vessel every month.

TRIBUTE TO MERCHANT SEAMEN.

In the course of an address on shipping delivered at a recent meeting of the Philadelphia Chamber of Commerce, Edward N. Hurley, Chairman of the United States Shipping Board, paid tribute to the character and bravery of the officers and men of the American Merchant Marine in war time. He also emphasized the importance of the merchant marine personnel as an asset for the Nation in coming peace times. His remarks under these heads were as follows:

"It is true that to-day we lead the world in ship construction, but we must back it up with officers and seamen, training and discipline. We are to-day training from 4000 to 5000 men each month to enter the merchant marine, and they are all typical Americans, who have the same spirit which Pershing's men showed at Chateau Thierry. I don't believe the American people appreciate the wonderful work these men are doing to help us win the war. We have every reason to be proud of what we have accomplished so far in the training of men to man our merchant ships.

"Admiral Sir John Jellicoe, of the British Navy, said recently that the officers and seamen of the merchant marine have founded during this war a new and glorious tradition in the teeth of undreamed-of peril. While there has been glory and official honor for the Army and Navy, merchant seamen have been taking their chances down in the fire-hold and in the life-boats, and on pieces of wreckage in the freezing north Atlantic, for ordinary day's wages. For them there have been no decorations, or uniforms, or war correspondents. They have faced the piratical submarine and the torpedo, not once but again and again as a regular part of their duty and stuck to the job until they were crippled, killed, drowned or frozen to death. In many cases their names and achievements have not been given publicity for military reasons.

"That is the spirit that has made the merchant marine so important a part of the military forces of America and the Allies. The dogged courage of the British mariners is the result of long training and fine traditions. As we build up our own merchant marine we shall support it with the same spirit. We must back it with officers and seamen, training and discipline. It is not enough to have ships—from one end of this country to another we must become ship-minded. We must go out over the world and give to other nations the peaceful service which is the basis of world trade. We must take the lean years with the fat years in shipping and instead of theorizing about the difficulties and limitations show our determination to keep a merchant marine intact as a basis for commerce in times of peace and a protection in the event of war."

Two war workers were discussing slackers. "Bothered with time-wasting callers, are you? Why don't you try my plan?" said the first. "What is your plan?" said the second. "Why, when the bell rings I put on my hat and gloves before opening the door. If it proves to be some one I don't want to see I say: 'So sorry, but I'm just going out.'" "But suppose it's some one you want to see?" asked the second. "Oh, then I say, 'So fortunate; I'v just come in,'" said the first.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Meeting to Mark Gompers' Home-Coming.

The American Alliance for Labor and Democracy has arranged for a national mass me eting in Chicago to welcome President Gompers on his return from Europe and to hear the story of his observations in the countries allied with America in the present war. The date for the meeting has been set for November 8, although this is announced as provisional.

Invitations have been extended to the President and his Cabinet, State Governors, Advisory Commission of the Council of National Defense, National War Labor Board, A. F. of L. Executive Council, officers of national and international unions, railroad brotherhoods, State federations of labor, city central bodies, all branches of the Alliance for Labor and Democracy and other men and women "representative of the life of the American democracy."

The Alliance has named an advisory committee of fifty-two, which includes members of the A. F. of L. executive Council, other trade unionists, Frank P. Walsh, of the National War Labor Board; Bernard M. Baruch, Chairman of the War Industries Board; V. Everit Macy, of the National Civic Federation; Charles S. Barrett, President of the Farmers' Educational and Co-operative Union; John Hays Hammond, August Belmont, George W. Perkins, Alton B. Parker and others.

In announcing the meeting, the Alliance says:

"President Gompers will return from Europe after having performed an unusual service for America. All America will want to know what he has to say; all America will want to welcome him back to America. He will return with a great message for all of our people and only by holding a great national meeting such as we have arranged can his message be properly got to the ctizens of the country.

"By bringing to Chicago representative men and women from various sections of the country the spirit of President Gomper's message will go throughout the country as it could in no other way."

Mexican Unionists to Meet A. F. of L.

The Mexican Federation of Labor (Confederacion Regional Obrera Mexicana) has accepted the invitation of the A. F. of L. to meet in international conference on November 13 next. The Confederacion was established last May and is the first national movement of Mexican trade unionists.

In accepting the invitation the southern workers present a program for the conference, in addition to the discussions suggested by the A. F. of L.

The new proposals include the appointment of one or two Mexican trade unionists "with residence in the United States near the A. F. of L. and upon whom should devolve the duty of organizing and watching the interests of Merican workers living in that country, in co-operation with the A. F. of L."

It is suggested that both organizations appoint representatives in border cities "so that they see to it that workers going from one country to another should be the object of attention which they undoubtedly deserve"; that every aid be assured Mexican workers who would join trade unions in the United States, and that the M. F. of L. join with the A. F. of L. in sending representatives to South America to acquaint workers with the proposed plan of Pan-American solidarity.

The A. F. of L. plan to invite President Wilson and President Carranza to the conference is approved. "The presence of these officials," it is stated, "will mark a precedent which will demonstrate that the influence of the two labor organizations has succeeded in bringing them together at the conference, so that they may obtain first-hand information of the aspirations and sentiments of the working people of their respective countries."

To "Dilute" Trades Is U. S. War Policy.

Jurisdiction claims and standards of competency of organized workers will be effected by the training and dilution service of the Department of Labor, which has perfected plans to "dilute" trades by the rapid development of workers who will be placed in war production.

Charles T. Clayton is director of this service, assisted by H. E. Miles as chief of training. The latter is a former director of the National Association of Manufacturers.

In explaining the theory of "dilution" Mr. Miles says:

"Dilution is simply the bringing into any trade that has been presumably adequately manned in peace times enough new people to offset the loss by draft and to produce the essential output required for the winning of the war. It means, also, the restricting of skilled workers to processes which only they can do and committing other elements to workers of lesser experience.

"Our man-power has been depleted. To supply losses of hundreds of thousands of skilled workers we must first promote every skilled man left so he may do the most difficult work within his ability. Second, we must bring into the factories men from the non-essential trades and obtain from them the highest service they can perform. Third, we must bring in women to supplement but not supplant men. The factories in England and France have been operated for the last four years mostly by old men, by men unfit for war and by women.

"The imperative need now is that every manufacturer shall realize that he must train new hands. The time has gone by when any factory can hope to replace skilled men by others already skilled, and each must provide experts to teach the recruits who will be called to fill vacancies."

World's Workers

Swiss labor has succeeded in obtaining fair representation on a special commission for food control, and in securing revision of the rationing and distribution of food, according to an announcement by the Swiss Federal Council. The Council has also promised to prosecute profiteers and to make provision against a coal shortage. Arrangements have also been made for loans for the construction of improved dwellings for workmen.

At the annual conference of the Amalgamated Union of Operative Bakers and Confectioners in London a resolution was adopted pledging support of the national demand for a £3 minimum and forty-eight-hour week, and calling upon all bakery and allied workers to join the union in order to secure their demands. It was stated by the general secretary that if the demand was not conceded, upon a given day the members of the union in England and Wales would cease work.

Mr. J. N. Bell presided at a delegate conference held recently at Scarborough, England, when it was decided that for trade union purposes the Workers' Union, National Amalgamated Union and Municipal Employes' Association should amalgamate. It was agreed that another conference of the three executives would be held at York to lay down the basis of the rules upon which the new organization will be run. The new organization will have a membership of 500,000.

So important is the mining industry to the success of the war that, according to word which has reached the Department of Labor, the British Government plans to return 10,000 miners to their work, releasing them from the army. These men entered the military service voluntarily or under the conscription act, but because of the urgent need of their services at home they will be sent back to the mines. Great Britain, according to some indications, is in danger of a coal shortage, and efforts are being made generally to speed up production. The output per man in England is not, from figures at present available, so good as in this country, where more coal has been mined than ever before despite depletion of labor power through enlistment and the draft.

Labor is showing its power against Germany both in Belgium and in the Ukraine, according to reports that have reached the Department of Labor. Not all of these have been verified, but it is pretty certain that large numbers of Belgian workmen have refused point-blank to do any work for the occupants of their nation, and now similar word comes from the Ukraine, where apparently a condition approaching the general strike is existing. The railroad men, it is reported, have walked out by thousands at the instance of agitators, who call upon the men to refuse to work in order that Germany may not ship food and other supplies away from their own country. The strike organizers have spent, it is said, 10,000,000 rubles in anti-German propaganda. The peasants are no better pleased than the railroad workers by the German occupation, and are reported only awaiting a favorable opportunity for revolt.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Pacific Coast Marine.

Captain J. M. Scott of Mobile, Alabama, is visiting San Francisco and looking after the interests of his vessels plying offshore from this port.

Although newly-built steamers at Portland are being fitted out as fast as possible, there are now sixty-five such vessels being built at Portland and at Astoria. All but six of them are wooden craft. It is expected the craft will all be in commission within the next sixty days.

Considerable increase in activity in lumber shipments to the Orient has come into evidence from Portland of late. Within the past month five cargoes have been dispatched to Shanghai, aggregating 6,000,000 feet and of the value of $187,000. There is considerable activity in lumber shipments to the west coast.

At a recent regular meeting of the Port of Seattle Commission the auditor submitted a report showing the net profits of the public terminals for the first nine months of the year to be $382,361. The commission received a communication from the Pacific Coast Association of Port Authorities relative to the fixing of uniform port charges, which was held over for further consideration.

The steel steamship "West Elcasco," another Skinner & Eddy product, launched September 21, had a successful trial trip over the regulation course on Puget Sound during the past week. She is the twenty-second vessel delivered to the Shipping Board by the shipping plant, and is the first vessel completed at the old Seattle Construction plant since consolidation. It required eighty-six working days to complete this craft.

What is believed to be the largest sailing ship ever built in the Puget Sound section, the 3500-ton five-masted schooner "Bright," was launched by the National Shipbuilding Company during the past week. She was originally designed as an auxiliary power craft, but difficulty in securing engine deliveries resulted in the change before launching. Mrs. Loren Grinstead acted as sponsor. The vessel was built for Fritdjof Bryde of New York.

The six boilers of the ill-fated San Francisco and Portland steamship "Bear" arrived at San Francisco during the past week on the deck of the motor-ship "Alabama." Captain Ayers had made a good job of stowing the forty-ton bits of metal away and he said that he was quite certain that there would be no shifting during the voyage to Shanghai. In addition to the boilers the vessel had about 600 tons of general freight taken on at Eureka and after loading a bit more at San Francisco will go to Portland and complete with lumber for China.

The tug "Hercules" of the Rolph Coal and Navigation Company's fleet sailed for Unalaska during the week and upon arrival in the Far North will proceed to tow to Seattle the bark "W. B. Flint" of the Libby, McNeil & Libby cannery fleet. The "Flint" was en route from Bristol Bay for Puget Sound when a terrific storm was encountered and the vessel was partly dismasted. Badly crippled the vessel was anchored off Unalaska and only the skipper and a few of the crew are standing by waiting for the "Hercules." The rest of the crew have made their way to Seattle on the Pacific Steamship Company's steamer "Admiral Watson." The "Flint" is loaded with canned salmon.

That there is plenty of work ahead at the Rolph shipyards on Humboldt Bay is evident from the fact that seven ways there are occupied by vessels under construction, and five more vessels are in sight. On the ways now are the hulls of two barkentines of the "Conqueror" type and five Emergency Fleet steamers of the Ferris type. Three more Ferris steamers are to go down when the ways are vacant, and in addition two sets of ways are to be built for the two ocean-going tugs that will be built at the yards for the Rolph shipping interests. At the Hammond yards all four ways are occupied by Ferris type steamers, and contracts are on hand for three more. Three already have been launched.

Three hundred and forty-three people, most of them outbound Alaskans and residents of the Yukon territory, lost their lives when the Canadian Pacific Steamship Company's passenger steamer "Princess Sophia" was picked up by storming winds and waters, dragged across Vanderbilt Reef, and dropped to the bottom of Lynn Canal, an arm of the Inside Passage, not far south of Skagway, Alaska. "No survivors," read a wireless from Juneau, Alaska, telling of the loss. The loss of the "Princess Sophia" with all aboard is believed to be the worst marine disaster in the history of the Pacific Coast. The vessel, 2320 tons gross, has been plying in Western Canadian and Southeastern Alaskan waters since she was built in 1912.

The history of sailing ship disasters on the Pacific for the year 1918, which has totaled eleven craft thus far, was added to during the week, when a report was received from Honolulu announcing the locatiion of another wreck. The advices were sent on by the captain of the British steamer "Coolgardie," en route from Sydney to San Francisco, the steamer making a call at the Hawaiian port. The wreck of a sailing vessel, presumably a schooner, was sighted on Enderbury Island of the Phoenix group, situated in latitude 3.10 south, longitude 17.10 west. There was no indication of life on the craft and nothing to indicate the identity. An effort was apparently made to collect data, but without result.

According to the official log of the ill-fated schooner "Ethel Zane," wrecked during a typhoon 350 miles off Guam July 19, Captain Charles Backus and his crew of eight men, after enduring terrible hardships and starvation on the water-logged craft for four days, came within an ace of being left to die by Captain Wilhelmsen and crew of the "Arapahoe," because the men on the rescue vessel believed a burning flare had been sent up by a German raider. The log was brought to San Francisco by Captain Backus himself, who arrived with his entire crew, with the exception of Second Officer H. Walberg, who was left critically ill at Manila. Backus expressed his appreciation over the treatment accorded the shipwrecked men by the commander and officers of one of the Government steamers who were responsible for their safe return to the Pacific Coast.

The steam-chooner "Newburg," recently wrecked near Point Reyes, Cal., is now lying partially submerged and has settled down a considerable depth in the sands. Pumps will have to be set to work to remove the water to make resurrection possible. The "Newburg" was the property of the Richardson Company of San Francisco at the time she was wrecked. The first attempt to salvage her failed, the propeller of the steamer "Brunswick," which went to Bodega for that purpose, being damaged by the hawser used in the first pull on the derelict. The Red Stack tug "Sea Queen" then went out and towed the "Brunswick" back to San Francisco. The "Arctic" is now engaged in salvage work. The "Newburg" was sold by the underwriters to the Union Lumber Company.

A report generally accepted in shipping circles as confirmation of the belief of the loss of the Gulf Mail steamer "San Gabriel" was received, when the British steamer "Tahchee," Captain McKay, arrived from Balboa. Captain McKay said that on October 15 he sighted what appeared to be the cabin of some vessel floating off the coast of Mexico in latitude 20.15° north and longitude 108.09 west. The steamer did not go close enough to make an identification of the derelict cabin, but it is believed that the flotsam can only be a part of the superstructure of the "San Gabriel." It was sighted due south about seventy miles from the position where the Gulf Mail vessel was last reported, under full steam, with her whistle blowing a call of distress. The "San Gabriel" was last reported in distress on September 17, and as more than one month has elapsed since then, this is taken as an indication that the craft may have turned turtle during the cyclonic storms sweeping the coast of Mexico at that time.

In pursuance of a recent act of Congress providing for the appointment of an additional supervising inspector, the first supervising district, formerly embracing all waters and rivers of the United States west of the Rocky Mountains and the Hawaiian Islands, has been divided into two supervising districts, namely, the first and eleventh districts. The new first district embraces the former local inspection district of San Francisco, Cal.; Honolulu, Hawaii; Los Angeles, Cal.; and Portland, Ore., with the headquarters of the supervising inspector of the first district remaining at San Francisco, Cal. The eleventh district embraces all United States waters in the Territory of Alaska, and all waters under the jurisdiction of the board of local inspectors at Seattle, Wash., and includes the local inspection districts of Seattle, Wash., and Juneau and St. Michael, Alaska. The headquarters of the supervising inspector of the eleventh district are at Seattle, Wash. William Fisher, formerly local inspector of hulls at Seattle, Wash., has been appointed supervising inspector of the eleventh district.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

Headquarters of the Sailors' Union of the Pacific, 59 Clay Street, San Francisco.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, OCTOBER 30, 1918.

A VOICE FROM HONGKONG.

One of Mr. Robert Dollar's henchmen in the Orient, Mr. Ray E. Gunn of Hongkong, has just unbosomed himself regarding the superior merit of Chinese crews.

Says this admirer of cheap Asiatic labor:

If a master has once sailed with a Chinese crew, that is, sailors and firemen, it is seldom he wants to go back to a European crew. The master of a Danish ship, who was making his first voyage with a Chinese crew, told me that his ship had not been in such good shape for a year, and that not one time had the steam been down, whereas in former days it was a continual quarrel with the firemen to keep up sufficient pressure. On the voyage across the Chinese had chipped decks, painted the houses and gear and had kept the ship washed down, all of which tends to lengthen the life of a ship.

In comparison with the wages of $75.00 gold per month plus overtime which the American sailors get, the Chinese sailors get from $15.00 to $30.00 (silver) per month and no overtime, and they give better service. It is the general report of passengers that they much prefer the Chinese cabin boys to the European.

It is well for a statesman whose boots have never been free from the dust of terra firma to stand amid the waving corn fields of the Middle West, and there prepond theories of Oceanic shipping. It is good campaign stuff, but when it comes to putting these theories into action and staking the future of a nation on them, it is a different proposition. A steamship is not run on theory or sentiment.

"The future of the nation?"

What profound interest can this champion of coolie labor have in the future of the nation?

What does he mean when he boldly and brazenly suggests the substitution of Chinese for American seamen?

Does he not openly insinuate that the Americans now manning our proud Navy and our ever-growing fleet of supply ships are unfit for sea service in the strenuous times of peace?

Yes, he suggests all this and more. But worse still, several so-called patriotic American newspapers have with apparent approval printed and reprinted his libelous and un-American screed.

What a relief to turn to some recently published expressions of deep appreciation for services rendered by American seamen. President Wilson, Secretary of the Navy Daniels, Chairman Hurley of the U. S. Shipping Board, have each been quoted in these columns heartily commending the loyal and patriotic work of American seamen, both in the Navy and the Merchant Marine.

More recently the British Navy League, on the occasion of the annual celebration of Nelson day received some messages, most pertinent to the subject under discussion, from the leading men in the empire.

"On the courage, skill and endurance of British seamen depend and always have depended the issues of the great war," wrote A. J. Balfour, Secretary of State for Foreign Affairs.

A message from Sir Douglas Haig, commander-in-chief of the British armies in France, read:

The heart of every one in the British army goes out with mine to all officers and men of the royal navy and mercantile marine. Words fail me in expressing adequately the gratitude and admiration for our comrades of a sister service. Thanks to their triumphant efforts, we remain mistress of the seas, and supplies of all kinds, not merely for our vast empire, but also for our allies, have never for a moment ceased to flow.

Admiral Viscount Jellicoe wrote:

It is sea power alone that has made it possible to bring to and maintain in the main theater of the war on the western front that great United States army which has turned the scale of battle. It is sea power also that has made possible the recent great victories in Palestine and Macedonia.

True and appropriate, every single word!

Yet "American" newspapers shamelessly print the vaporings of Mr. Dollar's hired man in Asia heaping fulsome praise upon the heads of Chinese seamen at the expense of their own countrymen. Truly, America's future would be dark if her statesmen had not long ago seen through the shallow, selfish plea of the "Dollar" patriots.

The future of America will be made secure by Americans and not by whining satellites of Mr. Dollar. Any other reply to the scurrilous screed from Hongkong would be dignifying the man who tried very hard to read and interpret his master's voice.

NO SCARCITY OF OFFICERS.

The problem of finding a sufficient number of American officers for the vast new Merchant Marine of the country has been solved. At any rate, such is the formal announcement of the United States Shipping Board.

The number of Americans skilled in seagoing, and competent to serve as deck officers, or having mechanical knowledge fitting them to become marine engineers who have come forward in response to the Board's calls for officers, has astonished the most sanguine prophet in the Shipping Board's recruiting service.

In anticipation of the demands for officers for the new merchant fleet, this service began training officers in June, 1917, at navigation and engineering schools established for the purpose. The goal of the service was then to secure 10,000 students for these schools in eighteen months. This total was passed early in September, and the total has since reached 11,000.

In addition, it was announced that so many former skippers of all degrees—including some genuine old hardshells, have quit jobs ashore to respond to President Wilson's call of October 1 for their services for the Merchant Marine, that the Shipping Board found it necessary to issue a special bulletin for their benefit.

It has been found that on reading the stirring words of the President, giving the reasons why experienced mariners should now return to the sea, many old-time salts dropped everything at home, and shaped a course for Washington, or the nearest seaport, with the expectation of immediate employment afloat. Not all of them could be placed on such short notice, hence the Shipping Board's bulletin, which is as follows:

Former seamen engaged in occupations ashore, who may wish to respond to the President's call of October 1, are requested to send their names, addresses and description of any licenses or discharges they may hold, to national headquarters of the U. S. Shipping Board Recruiting Service, Custom House, Boston, Mass.

These volunteers for sea service are particularly requested not to leave their present occupations or their homes in anticipation of employment in the Merchant Marine, until they hear from the Shipping Board, through its recruiting service.

At present there is a need of merchant captains, and former captains retired or actively engaged in mercantile pursuits, are requested to forward their addresses without delay. These addresses will be placed on file, and will be drawn upon as the recruiting service requires captains for positions on ships of the Merchant Marine.

Chairman Hurley, of the Shipping Board, remarked that while many additional captains would be needed for the new ships of the Emergency Fleet, they were not all wanted at once.

WELL FINANCED OPPOSITION.

The commercial insurance opponents of social health insurance are waging a vicious and desperate campaign in California against the proposed constitutional amendment which, if adopted, would make it possible for the next Legislature to enact workmen's health insurance legislation.

The California State Federation of Labor as well as the State Building Trades Council are working for this legislation, unanimously proposed by an official commission of investigation appointed three years ago by Governor Hiram W. Johnson. The measure is also endorsed by the State Board of Health and by numerous civic clubs and nursing associations. The support of all these influential bodies should assure its success. Yet, the sponsors of this amendment scarcely hope for victory at this election, because never in history has there been a better "financed" opposition.

The commercial insurance companies have combined house to house canvassing methods with their wide and costly control of publicity and absolutely not a thing has been left undone that might help in the defeat of this enabling act.

California is the first State to put to a vote the question of authorizing the Legislature to supplement its workmen's compensation law by a sickness insurance measure. And if the commercial insurance interests prove powerful enough to influence an adverse decision in the face of the State's official recommendation backed by organized labor, it will mean defeat in the first large-scale test of labor's aspirations for genuine social reconstruction. In addition, it will mean that the old fight which was necessary in order to secure compensation for industrial accidents must be repeated before the benefits of workmen's health insurance can be made available.

It is not to be expected that a child brought up under the restraints of factory labor will develop a very high regard for liberty of any kind.

IMPROVED CARGO-HANDLING.

In an effort to speed up the loading and unloading of our ships in port, representatives of the country's manufacturers of handling machinery held a meeting in the office of the Port and Harbor Commission of the United States Shipping Board recently and appointed subcommittees to study the question of cargo and coal handling machinery.

New cargo and bunker coal handling machinery or new adaptations of the machinery now being used at the ports is considered by the Commission the most likely means of cutting down a ship's "turnover." The active ports of the Old World have developed many of these devices, some of which are of American invention, and it is due to them that the capacity of the port is increased and cargoes handled quickly and cheaply. Now is the time to make our ports as efficient as any in th eworld, and to benefit by the experience abroad. The aim should be to bring the standard of efficiency for machinery for handling general cargo and bunker coal up to the standard reached by the ore and coal handling machinery of the Great Lakes and elsewhere in the United States which is of American invention and admittedly the most efficient in the world.

American manufacturers and those engaged in marine transportation have been invited by the Port and Harbor Facilities Commission to make a careful study of our entire port situation to the end that possible new and ingenious methods of handling cargo and coal may be developed in conjunction with the best arrangement of piers, warehouses and other terminal facilities.

Improvements, particularly in machinery, are desired now not only to expedite the movements of supplies to our armies in France but also to our merchant marine ready to meet the keen competition that will follow after the war.

SHIPS OPERATED BY NAVY.

In order that Congress and the country might have full and detailed information concerning the operations of the Navy the Chairman of the House Committee on Naval Affairs recently inserted a statement in the Congressional Record, prepared by the chiefs of the several bureaus in Navy Department, showing the work and the operations of the U. S. Navy in connection with the war.

Under the caption "Ships Operated by the Navy," appear the following interesting data:

In battleships, cruisers, gunboats, destroyers, mine ships, submarines, submarine chasers, torpedo boats, and auxiliary ships the Navy is now operating a total of about 570 regular naval vessels.

In addition, it is operating 93 vessels drawn from the Coast Guard, the Lighthouse Service, the Coast and Geodetic Survey, and the Fish Commission.

Further, the Navy is operating a fleet of 937 converted merchant vessels, comprising troop transports, mine sweepers, repair ships, tenders, hospital ships, yachts, tugs, and fishing vessels for distant patrol service, and yachts, tugs, and launches in similar service in the various naval districts on our coasts.

And, finally, it is now operating for the Army and Navy 247 vessels of the naval overseas transportation service, with 112 more to be commissioned shortly.

These various items make a grand total of 1959 vessels on a naval contribution to date to the allied forces waging the world war.

THE RIVETLESS STEEL SHIP.

Long Cherished as a Dream, Noted Experts Now Pronounce It Practicable—Small Rivetless Boats Doing Service.

The building of a steel ship in three-quarters of the time and at three-fourths the cost heretofore necessary—this is the latest revolution promised in the sphere of shipbuilding.

Instead of the long-prevailing, laborious and expensive method of riveting, successful experiments indicate that steel ships can be put together by the simple process of electric welding.

After exhaustively investigating electrical welding the Electrical Welding Committee of the United States Shipping Board Emergency Fleet Corporation is so well satisfied as to the practicability of this process, that it has formally urged that a 9300 deadweight ton ship be built by electrical welding. This recommendation has not yet been approved because of the general sentiment among the body of experts that a smaller ship should be first constructed. Meanwhile, there is about to be built for demonstration purposes at the yard of the Federal Shipbuilding Corporation at Kearney, N. J., a 42-point electrically welded midship section of a 9600-ton ship. The methods of assembling and welding to be used on this section are due to A. J. Mason, Consulting Engineer for the United States Shipping Board and member of the Electric Welding Committee.

But there are electrically welded vessels already in operation and giving good service. They are small, it is true, but they definitely establish the principle. When in June, 1918, there was launched in England a 275-ton barge built as a demonstration of what could be done by constructing wholly of electrical welding, the claim was made that this 'was the first electrically welded boat ever built.

But to America belongs the credit of the first vessel put together by electrical welding. Several years ago Mr. Geary, of the Geary Boiler Works, at Ashtabula, Ohio, built a 60-foot tug by the welding process. It has been in service on the Great Lakes, and has given great satisfaction. So far as the Electric Welding Committee knows, this is the first electrically welded vessel of any size built anywhere in the world. The welded barge that England built has also shown good results. It has been across the channel several times in stormy weather and has given no evidence of leakage or other trouble. So successful has it proved that England is now building a 1000-ton power ship largely to be electrical welding.

Many are the advantages that an electrically welded ship is regarded as having over the riveted ship. In a 5000-ton ship about 450,000 rivets are used. A 9500 deadweight-ton ship requires 600,000 or 700,000 rivets. By the welding process the saving in labor on the minor parts of a ship is reckoned at from 60 to 70 per cent. On the hull plating and other vital parts, the saving in labor, cost and time of construction by welding is conservatively placed at 25 per cent. Moreover, welding means a considerable saving in weight. By not having to use rivets, the saving in weight on the hull of a 9500-ton ship would be 500 tons, and the ship could thus carry 500 tons more cargo.

These are the estimates of the Electric Welding Committee. Professor Comfort A. Adams, chairman of this committee, is one of the most noted electrical engineers in the country. On the faculty of Harvard University and the Massachusetts Institute of Technology, he is also chairman of the Electrical Engineering Section of the National Research Council and President of the American Institute of Electrical Engineers.

For doing the work of riveting great physical strength is needed. But welding can be done by women as well as men. Even one-armed men can do welding. With the new draft calling out a still greater proportion of America's man power, the adoption of the welding process would thus insure a much larger radius than now from which to draw the labor needed to build our ships. In fact the new big shipyards haven't nearly the quota of riveters they need. Under the welding process both men and women can be brought in. The men who are now riveting can easily be transformed to welders. To train a welder requires about the same time as to train a riveter.

That electrical welding will some day largely replace riveting is the judgment of the Electrical Welding Committee, composed of eighty-two of the leading experts in both the electrical and metallurgical branches of the welding field. At the request of this committee, Captain James Caldwell, R. E., Deputy Assistant Director of Materials and Priority for the British Admiralty, was recently sent over to co-operate with the committee, study the process of welding here and give the committee the benefit of Britain's experiments. Captain Caldwell's report is highly favorable to electric welding. The Electric Welding Committee and Captain Caldwell agree upon these points:

That electric welded ships can be built at least as strong as riveted ships.

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Oct. 28, 1918.
The weekly meetings are postponed in compliance with the order as issued by the San Francisco Board of Public Health forbidding all public gatherings as a precautionary measure against the spread of Spanish influenza.

HARRY POTHOFF, Agent.
Sepulveda Bldg., 128½ Sixth Street. Phone, Home 115; Sunset 66 W.

DIED.

The official list of deaths will be found on page 11.

"The entire difficulty with leaky wooden ships built on the Pacific coast, according to the shippers, is that logs fresh from the forest are cut into planks and immediately screwed into place in the hulls of new ships. Another criticism extended to the wooden ships is that owing to the elimination of the successful type of many years ago, the new craft fail to make the required time while steaming and are often unmanageable, even in calm weather. The port captain of one concern now operating the Ferris and Hough type of wooden vessels said that in some instances it has been necessary to recalk hulls of steamers after a single voyage of less than 5000 miles. The proposed elimination of engines for the wooden steamers is expected to speed up the work of installing machinery in the steel ships, as all of the energy of the engine builders will be devoted to supplying the necessary equipment for steel ships.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Reconstruction problems are beginning to engage the attention of the American Federation of Labor, now that the end of the war is in sight. In view of the prospect of an early Parliamentary triumph by the labor movements of England, France and Italy, as well as by the working class in Germany, this does not come as a startling bit of news. On the face of the political map the American labor movement stands to have less influence in the making of national legislation in the coming two years than does the labor movement of almost any other first-class nation.

Yet so little discussion of after-the-war conditions has been had in this country that even the modest proposal to-day of a few fundamental conditions for the wage workers, during the next few years, seems to be resented by the anti-labor lobbies that eat their $4 meals in the chief hotels of the city of Washington.

Henry Sterling, who has come to the Legislative Committee at American Federation of Labor headquarters after fifteen years of lobbying at Boston for the Massachusetts State Federation of Labor, points out that after all the wage worker has a vital concern in this business of reconstructon. The labor movement has grown up to voting-age, so to speak, during the war. It represents the element that will suffer most from any bungling of the job of reconstruction. If millions of men are discharged from the Army and Navy in the next two years without any provision being made beforehand for their getting jobs, or if men unfitted for farming are planted on the land, these mistakes will bring suffering to all with whom these discharged soldiers and sailors must compete for jobs, and to all who must buy the products of farms that are not efficiently operated.

So, during the coming session of the outgoing Congress, the Legislative Committee of the Federation, along with the Legislative Committee from the Railroad Brotherhoods, will watch with keen interest the fight between the Republicans who want to put a bi-partisan committee of the Senate and House in charge of all reconstruction plans, and the Administration, which wants to establish a Reconstruction Commission, which would be named by President Wilson. Organized labor is not at all pleased with the Republican scheme. It knows that the bipartisan joint committee would be run as a sort of political joint debate, which would give no show at all to real reconstruction such as the labor movement demands. President Wilson, on the other hand, would name a commission that would perform its task, probably, as well as the Industrial Relations Commission, the Federal Trade Commission, or the National War Labor Board have performed theirs.

For example, there are the merchant marine and the new Government shipyards. The politicians want to sell them. Organized labor sees a chance of getting a better wage standard, better hours, better conditions in every way, through having the Government operate its own steamship lines, its own docks, its own shipyards. When the war is past the issue must be fought out. The organized employers are going to demand that the Government sell its properties. At the same time they will demand the abolition of the rules for American industry set by the War Labor Board. Labor will be in a dangerous position if the employers gain both points.

Government operation of railroads will proceed for twenty-one months after the war, but then it will stop unless Congress shall vote to continue it. The Brotherhoods and the Federation men employed in the Railroad Service are not at all convinced that Government operation has brought the millennium, and certainly they have been very resentful of the order issued by the Director General forbidding them to exercise the right of running for political office, but still they do not want to go back to the old scheme. They are going to have something to say to Congress, when the return of the roads to private hands is threatened.

What shall be done in order to fit the returned soldiers and sailors, after the war, into the most appropriate jobs in American life, is a question that the Labor Legislative Committees have not yet really tackled. They are studying the plans drafted by British and Australian labor, and the proposals made in France and Italy, but since American conditions are unlike the conditions anywhere else, the question cannot be answered so easily.

For one thing, they are favorable to a constructive scheme of improving the arid lands, the swamp lands, and the cut-over lands, and the making of great numbers of farms, ready and equipped for use by practical farmers when the farmers take off the khaki or the navy blue. The more real farmers are helped to start raising food, the easier will be the living problem for city workers, and the greater will be the incentive to Congress to meet the industrial problem in the same big constructive way. If Congress is to prepare farm jobs for soldiers after the war, then Congress can prepare shop jobs for shop men. Once get the thing started and a nation-wide program of common-sense demobilization, without any unemployment panic, will be developed.

In the meantme, Sterling and his associates are going to try to clean up the legislative docket by pushing to passage four labor bills—the Nolan-Johnson minimum wage bill for Federal employes, the Keating child-labor bill, the Booher convict-labor bill, and the McKellar retirement pension bill for Federal employes. These measures really belong to the period before the war, when the labor movement was thankful for anything at all at the hands of Congress. They are extremely conservative by comparison with the labor legislation that is being drafted for most of the parliaments of Europe to-day—but for lack of labor men in Congress they are the best that can be put through.

More labor members are needed for the new Congress to be elected on November 5th. Secretary Morrison has sent out to a great many Congressional Districts, East and West, the labor records of Congressmen who are running for another term. A few of these are excellent; most of them are bad. Yet every possible influence has been brought to bear, the legislative agents of the Railroad Brotherhoods say, in many of the districts, to split the labor vote by false issues that will serve the purpose of the enemies of organized labor. Some of the best labor centers in the country are possibly going to assassinate labor candidates next month. The tragedy of it is that after all it is the labor movement that is stabbed, not the labor candidate. He will get a job and stay in the movement, but there will be one more anti-labor vote in the House, and in committee of the House, during the two most important years since the Republic was founded.

* * *

The Women in Industry Section of the Department of Labor has drafted a series of recommendations as to labor conditions for women employed on war work. The recommendations are the outcome of the recent conference of women in industry, called by Miss Mary Van Kleeck, director of the section. When approved by the Labor Policies Board they are to be made an order by the Secretaries of War and of the Navy.

Work after 10 p. m. and before 6 a. m. is to be discouraged. Wages are to be based on the reasonable comfort standard of support for a family, rather than of the one worker alone. For doing the same work, women are to get the same pay as men. Where the employer claims that the work done by women is different than any done by men, he must prove that his wage to women equals the labor cost required if men did the job. Hours are fixed at eight, preferably, and all State restrictions upon hours are to be enforced; but in any case not more than ten hours can be worked in any day, including emergency overtime.

* * *

Chester M. Wright, of the Alliance for Labor and Democracy, corrects the statement made in this correspondence that he is private secretary to Samuel Gompers and assistant editor of the Federationist. He is only temporarily the assistant editor, and intends to return to New York upon Mr. Gompers' return from Europe shortly. No private secretary has been chosen to succeed Miss Florence Thorne, resigned to enter the Labor Administration. Wright occupies Miss Thorne's office until the head of the Federation shall return.

* * *

Sylvester J. Konenkamp was re-elected president of the Commercial Telegraphers' Union, at their biennial convention here last week. About forty delegates were present. New members are being enrolled at the rate of 1000 a month. A committee was chosen to remain here for further attempts to get the Postmaster General to order the reinstatement of men locked out in Seattle and other cities, and to induce him to deal directly with the chosen representatives of the telegraphers.

It developed at the convention that the Western Union Telegraph Company's private organization of its employes is pretty completely officered by members of the Commercial Telegraphers' Union.

Representative Mudd of Maryland said in the course of a heated argument about the Liberty motor: "We don't know the whole truth yet, and from half-truths optimistic and pessimistic conclusions can with equal justice be drawn. This brings you nowhere. It's like the two clubmen. 'Marriage,' said the fat, optimistic clubman, 'is a preventive of suicide.' 'And suicide,' said the lean, pessimistic clubman, 'is a preventive of marriage.'"

U. S. ADJUSTMENT AGENCIES.

In this statement is detailed the aims and scope of each Government agency. The first one taken up is the Shipbuilding Labor Adjustment Board or more commonly known as the Macy Board.

This board deals exclusively with adjustments of wages, hours and conditions of labor (a) in the construction or repair of those shipbuilding plants for which funds are being provided by the United States Shipping Board Emergency Fleet Corporation or the Navy and (b) in the construction or repair of ships which is carried on under contract with the Emergency Fleet Corporation or the Navy, exclusive of work being done in the Navy yards. The board has its own examiners in all districts where shipbuilding is carried on. In yards that do not deal directly with the union shop, committees are provided to consider grievances.

The National War Labor Board, or more commonly known as the Taft-Walsh Board, was formed by presidential proclamation to settle industrial disputes that threaten delay of war material production. It will not act in cases that are within the jurisdiction of regularly constituted Government boards of arbitration and conciliation operating in special fields, and reserves the right to decide what cases are of sufficient importance to demand attention. The assistance of the War Labor Board should be requested only after every other means of arbitration shall have been invoked.

The Bureau of Conciliation and Mediation was organized to supply mediators in industrial disputes. If a mediator is unable to bring disputants together, he may report the facts and recommend action by the War Labor Board.

The National Adjustment Commission handles longshoremen's disputes; the Railway Board of Adjustment No. 1 takes care of cases arising in engine, train and yard service; Railway Board of Adjustment No. 2 handles cases arising in railway shop matters.

The Cantonment Adjustment Commission functions in cantonments and other army construction work; the Harness and Saddlery Commission adjusts labor disputes arising in the manufacture of harness and leather goods for the Army, while the Anthracite Conciliation Board handles labor disputes arising in the mining of anthracite coal.

L. C. Marshall, Director of the Industrial Relations Group, will assist employers and workers in referring disputes to the proper Government agencies for mediation or arbitration. Briefly the functions of the Industrial Relations Group are as follows:

Offers counsel and advice along the lines of scientific employment and administers draft deferments, transfers and similar matters relating to the handling of the personnel in shipyards.

The group offers expert assistance in all matters affecting the health and physical welfare of the workers in the shipyards. The Safety Engineering Section gives close attention to the matter of the safety of the workmen engaged in building ships and ship material. It is the function of the Education and Training Section to inaugurate training centers throughout the country where men may be trained for shipyard work, and men already in the shipyards may be given more advanced training. The Labor Administration Section is a department for advice and counsel in the proper handling of disputes between employer and worker. While not organized for the purpose of arbitration, this section is often able to counsel those interested in such a manner as to avoid loss of time through strikes or lockouts.

Copies of this leaflet may be had by addressing the Director of Industrial Relations Group, United States Shipping Board Emergency Fleet Corporation, 140 North Broad street, Philadelphia, Pa.

A THOUGHT PROVOKER.

Four years ago there began a war, apparently to decide whether a small country, Serbia, should be compelled to submit its police and judicial arrangements to the control of a large country, Austria. Before this war had continued many months, it had taken in the question whether British sea-power should be broken and replaced by German militarism; and now, at the end of four years, it has become a war to decide whether the world is to be ruled by the common-sense and common conscience of the masses of mankind, or by the haughty and lawless will of ruling-class bandits. And this change has come about in precisely the same way—because all over the world the peoples have been compelled by suffering and sacrifice to think as never in their lives did they think before. They have been saying to themselves, day and night for four years: What has caused this horror to break upon us? And what can we do to make certain that such a horror shall never break again?

All over the world the people are coming together, working out their common thought, gathering power in their purpose to profit by the lesson of this tragedy, and establish ordered justice in their affairs. And we who believe in Democracy, go on our way serenely through these days of torment and terror—because we believe and know that the masses of men and women are not fools, and that once awakened and made to realize, they will not fail to do the job which must be done. The workers of the great industrial nations, America, England, France, Italy, Germany and Austria, have printing presses, labor unions and political organizations, and are educating themselves in the questions of this hour. They are learning who are the intriguing statesmen and the greedy exploiters—not merely in other countries, but at home; they are learning who are the men of secret ways and selfish purposes; they are learning the difference between blind and vengeful and destructive hate, and a just and righteous anger, steeling a solemn purpose.

When the world-conference meets which is to settle this war, there will meet at the same time a conference of labor men and Socialists. No one will be able to prevent its meeting, to suppress its voice; and if there are any ruling-class statesmen in any land who still cherish the idea that they can carry on the old kind of knavery at this peace conference, let them forget it quickly—for if they persist they will cause a general strike that will extend round the world, and send them the way of the late Russian Czar. The people are going to settle this war on their terms of justice and freedom, because they have learned that otherwise this world is a place in which no people can live, in which no people's life is worth living.—Upton Sinclair's Magazine.

LINCOLN ON WAR CRITICS.

Lincoln was no enemy of worthwhile criticism. But when a man told him something was wrong, he wanted that same man to tell him also how to make it right. He always objected to criticism that was merely objection—the criticism of the professional grouch (of which we have plenty in the present war just as he had in the Civil War); and here is what he said to such critics:

"Gentlemen, suppose all the property you were worth was in gold, and you had put it in the hands of Blondin, the tight-rope walker, to carry across the Niagara River on a rope. Would you shake the cable and keep shouting out to him: 'Blondin, stand up a little straighter—Blondin, stoop a little more to the north—lean a little more to the south?' No; you would hold your breath as well as your tongue, and keep your hands off until he was safe over.

"The Government is carrying an immense weight in this war. Untold treasures are in its hands. It is doing the very best it can. Don't badger it. Keep silence and we'll get you safely across."

Demand the union label. If you are the right sort of a union man one suggestion of this sort is all that is necessary.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

that district "rustling" or employment recommendation cards "issued by any person, agency, league or association are prohibited."

When 1200 miners were deported from Bisbee, in July, last year, the "Loyalty League" was most active in this outrage and opened employment offices to which workers were compelled to go before they could secure employment. The league's test of patriotism, of course, is a worker's attitude toward trade unionism, which is classed by the "patriots" with all forms of direct action, sabotage and bomb throwing. In Globe the league's employment bureau has openly violated the Arizona anti-blacklist law.

Federal Director Croaff's order destroys this adjunct to the copper mine owners and hereafter employers must not advance pay or arrange for interstate transportation of labor except through the agency or with the consent of the United States Employment service.

"No form of blacklist must be established or maintained," the order continues. "Such practices are in violation of State law and contrary to the policies of the United States employment service."

THE SOLDIERS' MAIL.

The mail service of our army abroad has now been taken over by the army. It is handling a million letters a day that are received in France from this country, and about 300,000 letters a day that are mailed in France for soldiers in France. It has warehouses for sorting mail at French ports. It has railway mail clerks on some 2000 miles of French railroads. It has a central postoffice at Tours, permanent postoffices at various points, mobile postoffices right up to the firing lines, and mail orderlies attached to each company of troops.

In the past, when the mail service for the army was under civil control, great delays were caused in the delivery of mail by the necessary secrecy concerning troop movements. Now, under military control, all movements of the mobile postoffices are telegraphed in code to the distributing postoffices and the letters follow the soldiers as they march. All the hospitals notify the central postoffice of the identity of wounded soldiers received or transferred. The central postoffice works with the central Record Division of the Adjutant General's office where every soldier in the army is card-indexed, and 150 men are there constantly employed searching out addresses. A system has been devised by which delivery may be quickened to "replacement units" who have been scattered among widely separated troops. And various means have been found for overcoming delays due to lack of shipping facilities or congestion of mail at crowded posts.

It still remains true that mail for some 50,000 soldiers in France is delayed because the letters are inadequately addressed. In the future all such letters will be stopped at New York and returned to their senders. It is estimated that 300,000 letters a month have been delayed in the past because the men were in "replacement units." This "floaters' mail" is now being handled expeditiously. The delay due to censorship is not great and it is being reduced.

The army authorities are aware that nothing sustains the morale of a soldier like letters from home. The mobile postoffices now keep up with the troops; the mail is received with the rations at the kitchen; and the whole reorganized postal service is devoted to providing that the doughboy's letters shall reach him as promptly and regularly as his meals.—By Harvey O'Higgins, Associate Chairman, Committee on Public Information.

AFTER THE MOSQUITOES.

Mosquitoes are as great a factor in the destruction of shipyard efficiency and morale as an epidemic of disease, declares George J. H. Cushing, assistant entomologist for the State of New Jersey in a report to Col. Philip S. Doane, head of the Health and Sanitation Department, United States Shipping Board. His report states that the mosquito scourage as affecting New Jersey shipyards on the Delaware River is under control.

For several weeks Mr. Cushing with a corps of thirty men has been conducting a merciless offensive against the pests in the districts adjacent to three large yards, the New York Shipbuilding Company, the Pusey & Jones yard, at Gloucester, and the Camden Force Company. The campaign has also been carried into the district where Yorkship Village is being constructed. This model village will shortly house several thousand employees of the New York Shipbuilding Company and their families.

The campaign along the New Jersey Delaware River front is part of a nation-wide mosquito extermination movement which was launched some time ago by Colonel Doane.

"Before we started our war against the mosquito," said Mr. Cushing, "conditions were very bad in the New Jersey shipyards on the Delaware River. Swarms of mosquitoes descended upon night workers in particular and drove them from the ways. Guards on duty at night complained with increasing bitterness."

The loss of time involved is pointed out when from five to six thousand workers in a shipyard stop many times in a day to brush away mosquitoes and prevent their biting. "It is a fact," according to Mr. Cushing, that a driller, a reamer or a riveter does not return to his work with his accustomed vim after he has been bitten. His mind is on that stinging little bite and momentarily he expects to be bitten again. So here the matter of efficiency comes in. It is a fact that workers in a mosquito-infested yard are 50 per cent. less efficient than workers in a yard that is mosquitoless. Mosquitoes carry malaria, too, and an epidemic of malaria would be disastrous to any yard.

In the work of mosquito destruction, Mr. Cushing, who was loaned to the Emergency Fleet Corporation by the State of New Jersey, has proceeded against all breeding places in the shipyard districts, including swamps, woodland pools, rain barrels, catchbasins and pools around building operations. Thousands of gallons of oil and lavacide have been spread over streams and pools. The territory in which the campaign was carried on is five miles long and three miles wide.

It is the worker, not the voter, who governs the conditions of labor.

THE RIVETLESS STEEL SHIP.

(Continued from Page 7.)

That plans for ships designed to be riveted, can easily be modified so as to adapt them for extensive electric welding, and thus considerably save in cost and time for hull construction.

That ships especially designed for electric welding can not only be built at a saving of 25 per cent. over present methods and in less time, but a class of labor not now available for shipbuilding can be largely employed.

The coming in of the electrically welded ship is shown by the significanct action of Lloyd's Register of Shipping in England. It has taken a very active and progressive stand towards electric welding, and has spent large sums of money in experimental work. Recently Lloyd's issued provisional regulations under which they will separately classify ships built wholly by electrical welding.

Of course, there will be no sudden transition on a large scale from riveting to electric welding. Existing shipyards are equipped with apparatus for riveting. They will need time to adjust themselves to new conditions. Time is also necessary to get the welding machinery and teach operatives.

Of itself electric welding is not a new idea. In some industries it was in use a quarter of a century ago. A number of our railroad systems have used it to a large extent for repair work. Before the activities of the present United States Shipping Board began in 1917, little shipbuilding was done in the United States, and the few shipbuilders that we had mostly regarded the application of electrical welding to ships as more or less chimerical. There were some, however, who did dream of the era of the rivetless ship.

It has been the great war that has brought the electric welding of ships to the forefront. The repairing of the machinery of fifteen German and Austrian ships that were sabotaged in New York harbor in 1917 was done by electric welding, and done with great rapidity. It was the success of this operation that in part led to the appointment of the Committee on Electric Welding by the United States Shipping Board Emergency Fleet Corporation. In England not enough oxygen could be obtained to do the welding by the oxy-acetylene method. Electric welding was therefore resorted to, and it was found, on the whole, more satisfactory and cheaper for shipbuilding.

There are two kinds of electric welding. One process is that of arc welding—a process largely used in England. There is a wire about an eighth of an inch in diameter which is brought into contact with the work, and then pulled away far enough to form an arc. The wire is melted by the heat of the arc. In turn that melts the metal and fuses both the parent metal and the rod. The metal from the rod deposits in the joints and fills them up as though cast in them. This was the process used to repair the sabotaged German ships. To supply the requisite voltage and current, all that is needed is a simple machine nearby. The operator has only to hold a light electrode.

The other method is spot welding. This is a purely American process, and is applied to heavy plate work. A big, heavy apparatus is used to bring the plates together and squeeze them under a pressure of about twenty-five tons. Then an electric current is passed through the two plates from one electrode to another. This actually welds the two plates together. It is just like riveting except that there is no punching of holes and there are no rivets. The welding leaves a spot; hence the term spot welding. A spot can be welded in about fifteen seconds. "As far as we can see," said Professor Adams, "practically everything done on a ship by rivets can be done by large spot welding. We are now making experiments with a portable spot welder. But the natural field for spot welding is in the fabrication shop where stationary spot welders can be employed. This applies to all other structural steel work as well as to ship fabrication. The cost of the apparatus and power needed for spot welding is greater than for arc welding but the labor-saving in spot welding is very much greater, and the total cost of spot welding is much less than that of arc welding."

In order to solve the problem of cheap and efficient operation of ships after the war when the competition will become keen between all nations, shipping men will advocate that this Government take immediate action to make complete investigation into the merits of the internal-combustion engine. It will be proposed that the Government appoint a committee of expert engineers who will invesigate all of the existing engines, including the Diesel, and then attempt to build or create an engine superior to any existing. The shipping interests will advocate the adoption of a standardized type of engine that will be utilized for all American ships, each to be a unit that will correspond to the size of craft into which it will be installed. It will then be possible to construct these engines quickly, just as our present-day steel vessels are built, and the question of providing the machinery will be solved for the future.

SHIPPING FACTS AND FIGURES.

(Compiled by the Information Bureau of the United States Shipping Board; data revised up to September 1, 1918.)

Status of World Tonnage, September 1, 1918.

(Germany and Austria excluded.)

	Dead-weight tons.
Total losses (Allied and neutral) August, 1914-Sept. 1, 1918	21,404,913
Total construction (Allied and neutral) August, 1914-Sept. 1, 1918	14,247,825
Total enemy tonnage acquired (to end of 1917)	3,795,000
Excess of losses over gains	3,362,088
Estimated normal increase in world's tonnage if war had not occurred (based on rate of increase, 1905-1914)	14,700,000
Net deficit due to war	18,062,088

Construction of ships in a single month exceeded destruction of them for a similar period, in May, 1918, for the first time since December, 1915.

In August, deliveries to the Shipping Board and other seagoing construction in the United States passed Allied and neutral losses for that month. The figures:

	Gross tons.
Deliveries to the Shipping Board	244,121
Other construction over 1000 gross	16,918
Total	261,039
Losses (Allied and neutral)	259,400
America alone surpassed losses for month by	1,630

Note.—World's merchant tonnage, as of June 30, 1914, totaled 49,089,552 gross tons, or, roughly, 73,634,328 deadweight tons. (Lloyd's Register.)

DIED.

Eugene A. G. Beck, No. 1399, a native of Denmark, age 49. Died at San Francisco, Cal., Oct. 12, 1918.

Karl J. Cruse, No. 1374, a native of Sweden, age 30. Died at San Francisco, Cal., Oct. 25, 1918.

Edward M. Ericksen, No. 699, a native of Norway, age 29. Died at San Francisco, Cal., Oct. 26, 1918.

Arthur E. Friend, No. 328, a native of California, age 38. Died at San Francisco, Cal., Oct. 22, 1918.

Elmer Funk, No. 933, a native of Denmark, age 23. Died at Port Townsend, Wash., Oct. 12, 1918.

Howard C. Hubberd, No. 2743, a native of Minnesota, age 21. Died at San Francisco, Cal., Oct. 23, 1918.

Rudolf A. Johansen, No. 2502, a native of Norway, age 28. Died at San Francisco, Cal., Oct. 25, 1918.

Robert Kambi, No. 1365, a native of Russia, age 30. Died at San Francisco, Cal., Oct. 26, 1918.

Emil Arthur Lehtonen, No. 1602, a native of Finland, age 34. Died at San Francisco, Cal., April, 1918.

Frank Lindgvist, No. 849, a native of Sweden, age 41. Died at San Francisco, Cal., Oct. 23, 1918.

Vincent Madec, No. 878, a native of France, age 44. Died at San Francisco, Cal., Oct. 19, 1918.

Harald R. Magnussen, No. 2630, a native of Norway, age 33. Died at San Francisco, Cal., Oct. 19, 1918.

Andrew Middlemas, No. 2490, a native of Scotland, age 26. Died at Seattle, Wash., Oct. 21, 1918.

Ole Olsen, No. 637, a native of Norway, age 39. Died at San Francisco, Cal., Oct. 22, 1918.

John Peterson, No. 837, a native of Sweden, age 44. Died at Tacoma, Wash., Oct. 7, 1918.

Geo. F. Rasanen, No. 1269, a native of Finland, age 25. Died at San Francisco, Cal., Oct. 26, 1918.

Henry Thomas, No. 550, a native of England, age 37. Died at Hoquiam, Wash., Oct. 21, 1918.

Sigurd Thorstensen, No. 1157, a native of Iceland, age 31. Died at San Francisco, Cal., Oct. 23, 1918.

Carl Sanford Ward, No. 1585, a native of Iowa, age 23. Died at Seattle, Wash., Oct. 14, 1918.

John Woldhouse, No. 1216, a native of Holland, age 36. Died at San Francisco, Cal., Oct. 27, 1918.

Orville Wright, at a dinner in Dayton, talked of his early struggles. "We had, my brother and I," he said, "lots of oral encouragement, but no financial encouragement. People talked big, but they would put up nothing. With their mouths full of millions and their quite empty hands they reminded me of a barber I once knew. This barber said one day as he shaved me: 'That's a fine pup of Wilberforce's. I'd give anything for it.' 'Well, it's for sale, isn't it?' said I. The barber sneered. 'Oh, yes; it's for sale,' said he, 'but Wilberforce, the chump, wants $1.50 for it.'"

"CITIZENS OF THE WORLD."

"I am a citizen of the world," wrote Paul Jones, one of the greatest sailors who ever trod a deck.

In these few words the brilliant Scot, whose sword was drawn with imperishable effect in behalf of the struggling American colonies in their fight for independence, summed up the creed of the true sailor.

The sea knows no frontiers. The sailor is at home alike under the North Star and under the Southern Cross. In any port whose life does not offend the better impulses of heart and mind the sailor should take his ease in content.

Although the great achievement of Paul Jones' life was in behalf of the American colonies, his early home was by a misty shore of west-coast Scotland. Here he was reared. But he was quite as much at home in Portsmouth, N. H., where he boarded for some time when fitting out the "Ranger," a product of a Portsmouth yard. It was in this New England slip he rereived the first salute ever accorded the American flag by a foreign nation. The last days of the illustrious admiral were passed in Paris, and it appears he lived there as contentedly as he had lived in Scotland or New England.

The young Americans now entering the Merchant Marine of their country should keep the precept of Paul Jones well in mind. Many of them, leaving their home towns for the first time, attach undue importance to the life they leave behind. They make themselves believe it is better than life elsewhere. Some of them pine for it, making themselves unhappy, and reducing their efficiency. In short, they leave their minds at home, and give only their lagging bodies to their country's service.—The Merchant Mariner.

German submarine activity reached such a low state during the past week as to become almost negligible as a war measure, notwithstanding that many U-boats are lurking in the Atlantic and the Mediterranean. The British Admiralty looks upon this situation as part of the German peace offensive. It is believed at the Admiralty that if Germany elects to fight to the end of her resources her greatest submarine effort may be expected late in December and in January.

Labor News

"Natural conditions in the northern part of Mexico are almost identical with conditions in the border States of this country; industries are the same, and the standards of living, now so different, should be the same. This can be done through education and fraternity of labor." Thus writes Governor George W. P. Hunt, of Arizona, in a message to President Gompers of the American Federation of Labor, accepting an invitation to attend the international labor conference at Laredo, Texas, in November. Governor Hunt is sought by Porto Rican labor men as Governor of that island.

Among the Porto Rican laborers who are being transported to America to supplement the labor supply are many men of sixty years or more. One of the most interesting and at the same time pathetic sights connected with the moving of these great numbers of men to the United States is the eagerness of the old men to reach what they consider a land of promise. They have worked in the island for the whole term of their existence without a thought that they would ever be able to leave it, until now the war's demands have provided them with opportunities in a new country.

The New York World accepts the eight-hour decision of Supreme Court Justice Clark of North Carolina, acting as umpire for the National War Labor Board in the case of Wheeling iron molders. "It has always been easy," says the World, "to flout the assertion that as much productive work, especially in connection with machinery, could be done in eight, as in nine, ten or twelve hours, but in practice the theory has been demonstrated. In making these computations no one day can be used for a test. The honest eight-hour worker will do more in a year than the ten-hour worker, and he will live and work more years."

The National Adjustment Commission, composed of representatives of the Government, organized longshoremen and their employers, has announced a wage increase that affects 45,000 of these workers along the Atlantic coast. The chief points of the award are: An eight-hour day with a Saturday half holiday. One dollar an hour for overtime, instead of the old rate of 75 cents. Raising of the former rate of 50 cents an hour for regular work to 65 cents. The ward is effective from the first of this month to September 30, 1919, unless the commission should, upon "its own motion, upon grounds of national policy," decide otherwise.

Awards in controversies in the cases of ten street railway companies and their employes were announced during the past week by the War Labor Board. Wages were at issue in seven of the cases and in each increases were granted the men. At Portland, Oregon, the high cost of living occasioned an award of 46, 48 and 50 cents an hour for platform men and wages of other employes were increased in the same percentage, with a minimum of 44 cents. In the Des Moines (Iowa) case, the board ruled that men must avail themselves of arbitration provided for in their contract with the company, with right of appeal to the board should such arbitration prove inoperative.

INFORMATION WANTED.

The members of the crew of the S. S. "Grayson," who rendered salvage services to the "Lowther Grange," will please communicate with S. B. Axtell, 1 Broadway, New York, N. Y., for their share of salvage money. 1-30-18

The men hereinafter named are requested to call personally or communicate with J. T. Smith, 112 Market St., San Francisco, Cal. Chas. Fraser, W. Holmes, Otto Kanka, Karl Olsen, William B. Pierce, Thomas Wolstenholme. 10-2-18-Adv.

Hans Herman Hansen, a native of Bornholm, Denmark, about 30 years of age, last seen at San Francisco, Cal., in 1914, is inquired for. Any one knowing his whereabouts please notify his sister, Mrs. Marcher; address, Modesto, Cal. 3-20-18

INFORMATION WANTED.

An appeal has been taken by the owners of the Bark "Portugal" from the decision of the Federal District Court in the matter of salvage award of $30,000 recently made and referred to in these columns. The determination of this appeal may be a matter of six months. Seamen who wish to get their money as soon as possible should communicate with Silas B. Axtell, Attorney, One Broadway, New York, in order that I may send them a power of attorney form to be signed, which will be required by the court before the money can be paid out. The crew, of course, are sure to get some money and they will probably get their portion of the amount awarded by the lower court. It seems quite possible that the decision of the lower court will be affirmed. 7-24-18

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

The following-named men, who were on the "Costa Rica" on her recent trip from Borneo to Honolulu, will please call on F. R. Wall, 324 Merchants Exchange Building: S. Veal, C. O. Hansen, H. Kaspersen, B. E. Johannesen, K. Andersen, S. Olsen, H. Helliksen, O. Ekquist, J. Malee, Carl A. Bodin, Ernest Bozzini, M. McCloskey, A. D. Williams, J. C. Whittle, Swan Bylander, N. P. Christensen, J. Knutsen, W. A. Parris, H. Svard, J. R. Magee and Manuel Guerra. 6-19-18

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City. 7-24-18

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

INFORMATION WANTED.

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City. 6-5-18

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

William O'Keefe, who has not been heard from in many years, is inquired for. His niece, Catherine Lynch, aged 12, is very anxious to locate him. Anyone knowing his whereabouts, please notify Catherine Lynch, 42 Monroe Street, New York City.

Home News

Out of a $250,000 revolving fund Minnesota is clearing five acres of the 40-acre tracts she is selling to settlers so that they can support themselves while clearing the remainder. Land improved at a cost of $7 or $8 an acre sold for $22.10 an acre.

Henry Ford is so non-partisan that he will not permit the Michigan Democratic State Central Committee, on whose ticket he is running as United States Senator, to manage his campaign, but is organizing a committee of his own. The non-partisan committee will have to raise and spend its own money.

A direct inquiry into the cost of living is to be made by the United States Department of Labor, under the direction of John M. Foster, of the Bureau of Labor Statistics. Personal visits will be made to families living on less than $2,000 a year, and an effort made to discover just how the money is spent.

At a conference in Philadelphia at which was discussed industrial conditions in war work, Miss Elizabeth McShane of the State Health Insurance Commission stated that through sickness 16,800,000 working days were lost in Pennsylvania last year. Among ship builders, 600,000 days were lost, and sickness prevented the mining of 4,500,000 additional tons of coal.

A dairy employe recently told the City Council of Wheeling, W. Va., that milk is being manufactured in that city by mixing a powder with river water, and that the concoction defies chemical analysis. Two concerns are involved and they were cited to appear before the council, but refused on the advice of attorneys, who said that the city law makers have no right to interfere with this business unless the law is complied with and warrants are sworn to. In the meantime Wheeling babies will be fed this stuff until a lot of red tape is unraveled.

The Federal Bureau of Mines has succeeded in inducing Oklahoma oil operators in the North Cushing field to cement their wells in order to check the flow of water. The bureau states that the production of oil from fifty wells has increased more than 2000 barrels a day, or an additional $4500 a day to the operators' gross income. If this increase continues for one year, it means an additional 750,000 barrels. It is estimated that the cost of excluding water from these wells was $10,000, a return of about $165 for every dollar invested.

Chairman Baruch of the War Industries Borad has indicated that prices and distribution of practically all articles of wearing apparel are to be controlled by his board. The prescribing of certain fixed prices for shoes constituted only the first step in a general policy for price control of clothing. While shoe prices will be regulated the prices set by the board will have no resemblance to before-the-war prices. The agreement with manufacturers provides that after June 1 next the maximum price of shoes will be $12. For low shoes of the style usually worn in the summer months the maximum price will be $11. Between now and next June manufacturers will be permitted to dispose of higher-priced shoes. After June 1 the price and grade will be regulated.

Domestic and Naval

Ground was broken recently at Birmingham, Ala., for the fabricating plant of the Birmingham Steel Corporation. The output of this plant will largely be used at the shipyard of the Mobile Shipbuilding Company. The Birmingham plant will shear, punch, and bend steel planets and slabs into shape for the shipbuilders. The plant will cost about $1,000,000 and will be in operation within five months.

The work of raising and restoring the steamer "Newport News," of the Norfolk and Washington Steamboat Company, which burned at her dock in Washington a short time ago, has been undertaken by the Merritt and Chapman Wrecking Company. It is stated that the hull and machinery are practically undamaged, but the entire superstructure will have to be rebuilt. The steamer had been used as a reserve boat, and therefore, the loss to the traveling public is not great.

The building of concrete ships has made rapid advancement, according to the testimony given at the first annual convention of the International Concrete Ship Association held in New York on October 4. Keels are scheduled to be laid soon in the five Government concrete shipyards for thirty-eight tankers and cargo ships of 7800 tons, three cargo ships of 3500 tons, and one of 3000 tons. The first vessel will be launched early in December, and all before September, 1919.

The total British tonnage in new constructon for the first nine months of 1918 was 1,174,641, as compared with 743,753 in the corresponding period of last year. The total for twelve months ended September, 1918, was 1,594,262, as compared with 957,185 for the previous year In the second quarter of 1917 the world's merchant shipping suffered a loss of 2,236,934 tons, but in the last three months for which figures are avaliable—June, July and August the total was 932,556 tons, a reduction of 58 per cent.

The steamboat "St. Louis," of the St. Louis and Tennessee River Packet Company is partly submerged in the Mississippi River about twenty-two miles south of St. Louis, where the boat sank while en route to St. Louis with forty passengers, most of whom were women and children All of these were saved with the exception of one. The boat sank in twenty-five feet of water after striking an obstruction. Divers went to investigate the condition of the vessel's hull, but the owners say that the boat will doubtless be abandoned.

Published statements quoting Representative Fordney, of Michigan, to the effect that in contracts let for work at Hog Island the Government agreed to pay back taxes imposed by Congress, have led Charles Piez, Vice-President and General Manager of the United States Shipping Board Emergency Fleet Corporation, to issue a statement to the effect that the Hog Island contract (No. 83—S. C., dated September 13, 1917) provides that the American International Corporation purchase with its own fund land at a cost of $1,706,000. The Fleet Corporation owns the improvements. It has an option to purchase the land at cost.

"Had all the watermelon you want, Bobby?"

"No, auntie, but I've had all I can eat."—Kansas City Journal.

Stock Trouble.—"I saw a big policeman take a tumble on a piece of banana peel."

"I see. A fall in copper security."—Baltimore American.

Ned—That was a hard blow to literature yesterday. Ted—What was that? Ned—Why, lightning struck a house, setting fire to a magazine in the cellar, which exploded, shattering the first and second stories, and killing two authors who were at work on the third story.—Bohemian.

Friend—What are you so glum about? Mr. Oldfellow (who has just married a young wife)—I didn't quite like my bride's behavior at the banquet last night. Friend—I didn't notice anything unusual. Mr. Oldfellow—Well, she drank heartily to the toast that my fortune would never grow less, but she passed up entirely the toast to my health.—Town Topics.

The young detective was enthusiastic but inexperienced. Rushing into his chief's office in great excitement he cried: "I've found the assassin! I've got him cornered so that he can't escape!" The chief regarded him with withering scorn. "Allow me," he said, "to draw your attention to the fact that at present we are looking, not for the assassin, but for clues."—Judge.

"Did Angela reject Sammy when he proposed?"

"Not exactly, but she put him in Class 5, only to be used as a last resort."—Life.

Parke—Yes, sir. The war will be won in the kitchen.

Lane—Good! I've had several wars in my kitchen and never won one yet.—Judge.

Professor—I went to the railroad office to-day and got that umbrella I left on the train last week. His Wife—That's good. Where is it now? Professor—Eh? By Jove, I—really, my dear, I'm afraid I left it on the train.—Boston Transcript.

Little Memphy (endeavoring to entertain Sister Kate's beau)—When Sister Kate marries you will she become a widow? Kate's Beau—A widow? Ye Gods! What put such nonsense into your little head? Little Memphy—Hearing mother tell sister that you are a dead one.—Judge.

First Postal Clerk—Here's a bag of letters from families to boys at the front, and it's been here some time, too. Second Postal Clerk—And here are ten bags of franked campaign literature from Congressmen. First Postal Clerk—We can't send them both. There isn't room. Second Postal Clerk—Let's take a chance and send the boys their personal letters. First Postal Clerk—We'll do it, if it costs me my job.—Life.

News from Abroad

To the French Government has been assigned the German steamships "Aracaju," "Coxambu," "Parnahyba" and "Auturwocoa," recently commandeered by the Brazilian Government.

Norway lost thirteen vessels, aggregating 22,976 tons, through war causes in the month of August, according to an announcement made at the Norway legation, London, England. Two Norwegian sailors lost their lives.

The installation of the new Japanese cabinet headed by Kei Hara, marks the rise of the first commoner to the office of Premier. The liberal press of Japan hails it as the first long step toward a non-bureaucratic people's cabinet.

The second concrete ship built in China is expected to take the water within a month. She is only sixty-five feet in length and fifteen feet beam. The event is chiefly interesting as the beginning of a new industry in China, says the East and West News.

Riots and revolts were again reported from Germany, but these are always to be taken with reservations. Even the glorification of Liebknecht is suspicious, for, though he appears to be the noblest German of them all, the Kaiser would not hesitate to use him as a mercy-seeking device—or, better still, as a means of dividing the allies.

Following the authorization granted by the Peruvian Congress an agreement has been signed at Lima, Peru, by representatives of Peru and the United States transferring to the American Government control of the German interned shipping in Peruvian harbors. Six steamers and four sailing vessels, totaling more than 25,000 registered tons are involved.

Militarily speaking, the situation in Europe is better described by the map than by any words. British, French, American, Belgian, Italian, Serbian and Czecho-Slovak forces are everywhere victorious. The Italians, despite weather conditions, launched a new and successful offensive, and the Serbians are almost back to Belgrade. Germany lost in prisoners no less than 15,000 men in four days on the west front, and at least 50,000 were put out of commission during that time.

The war seems to have settled down to a simple matter of how long the German junkers can keep on fooling the German people, for upon that problem depends the question of how long Germany can maintain her futile defiance of the rest of the world. There is no reliable means of getting at the state of public opinion in Germany, and in the absence of such knowledge we are as much in the dark as to the end of the war as we were at the beginning. We all know now how it will end, but no one knows when. It may be next week; it may not be until the middle of next year, since everything depends upon a factor which not even the German junkers can estimate with any accuracy. This much is certain to be: if the German people can be kept persuaded that unconditional surrender means total destruction or long years of hard labor paying enormous indemnities, they will stand behind the German army, which, in turn, will fight more and more stubbornly as it gets back into more favorable defensive positions.

With the Wits

Are We Coming to This?—"I've given up smoking, and now my old cigarette case comes in handy for carrying my lunch."—The Passing Show.

Convenience.—Customer—You have placed all the large berries on top.

Fruit Peddler—Yes, lady. That saves you the trouble of hunting through the box for 'em.—Boston Transcript.

Poor Pete.—Mrs. Nuritch—Edith, what are you reading?

Daughter—Petrarch's poems, ma.

Mrs. Nuritch—Edith, haven't I warned you against the vulgar habit of shortening men's names? Say Peter Rarch.—Boston Transcript.

New Use for an Old Evil.—Binks—Ah, what a loss I have suffered in the death of my mother-in-law!

Jinks—She meant a good deal to you?"

Binks—Yes; she was a vegetarian, and gave us her meat-card.—Tit-Bits.

Cheering Him Up.—Sergeant-Instructor (to cadet)—Na, ye'll no mak' an officer. But it's just possible if the warr keeps on a while an' ye prractise harrd—verra harrd—ye micht—micht, mind ye—begin to hae a glimmer that ye'll never ken the r-rudiments o' the wurrk!—Punch.

A Humanitarian.—"What is your objection to children?" asked the man who was hunting a flat.

"I like 'em," replied the janitor. "I haven't the heart to ask anybody with children to move into a place that was as short of heat as this was last winter."—Washington Star.

Feeding the Baby.—A very prosperous-looking gentleman stopped and permitted the very pretty girl to fasten a carnation in his buttonhole. Then he handed her a quarter.

"What is this for?" he asked.

"You have fed a Belgian baby," was the reply.

"Nonsense," said the other, adding a $5 bill to his contribution, "you can't do it. Here, take this, and buy a regular meal for the baby."—Pittsburg Sun.

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

LABOR'S OUTLOOK ON THE FUTURE.

Are We to Have a New Social Order?

In this article Arthur Henderson, one of the recognized leaders in the British labor movement, expresses the opinion that the old order of society has dissolved, and a new one is taking its place. Even in the most military-ridden countries of Europe the people are beginning to discover their power, and never again will they be driven into war by the sinister forces which seek to glorify their own names, and to feed their own ambitions.

Noisy mouth-patriots, and others of that type, who are apt to take issue with Mr. Henderson's expressed views, will probably modify their personal assaults upon this courageous leader when they know that Captain David Henderson, oldest son of Arthur Henderson, was killed on the battlefield during the first year of the war; a second son, Will Henderson, has been returned as a wounded soldier, and the third son, a lad under age, has enlisted and gone to the front.

With the coming of peace the world will enter upon an era of revolutionary change to which there is no parallel in history. In this country, as in every other, the war has already profoundly modified the economic system of pre-war days, and has introduced far-reaching innovations into industry. Methods of State control which would once have been regarded as intolerable infringements of the rights and liberties both of employers and workmen have been accepted without effective protest even from those bred in the individualist tradition of the last century.

Some of these changes are admittedly only temporary and provisional. They were dictated by national necessity, and were introduced upon the explicit understanding that an unprecedented situation had arisen which called for bold and drastic measures. Those measures which relate to trade union practices and customs in the workshops, in particular, are governed by strict pledges for the restoration of pre-war conditions when the national crisis is over.

Nevertheless, the extent and importance of these changes in methods of production, the control of industry, the management and distribution of labor, and the limitations imposed upon the activities of financiers and the enterprises of individual capitalists, practically involve a revolution, the effects of which will remain when the necessity which gave them their sanction has passed away. Most of them are permanent.

In four crowded and eventful years we have gathered the fruits of a century of economic evolution. We have entered upon a new world. With the main features of this new world we are still unfamiliar. We cannot yet begin to measure the material effects of the war upon the commercial and industrial system upon which our civilization has been based.

Still less can we estimate the results of the inner revolution of thought and feeling which has accompanied these material changes. Yet we are beginning dimly to see that the old order of society has dissolved. A new social order is taking shape even in the midst of the stress and peril of the time.

This revolution is fundamental, for it touches the springs of action in the great mass of the common people. Greater changes in the material structure of society have still to come, but they will be dictated not by the exigencies of war but by the new democratic consciousness and the new social conscience which have come to birth in the long agony of the present struggle.

The people have been taught by events, better than by any process of rational argument, that they alone make war possible, though they have no hand in fashioning the policies that lead to war; their energy, devotion, and sacrifice, in trench, field and factory, are qualities which their rulers exploit when they quarrel with one another. In times of peace the people feel that they are nothing; when war comes they are found to be everything.

War is possible only because the skill and bravery of the common people, their immense industry, their patient endurance, their direct and simple sense of right and wrong, give the world's rulers a feeling of power which they use, not to ensure the happiness and prosperity of the multitudes of humble folk, but to glorify their own names and to feed their insensate ambitions.

The people have discovered this, and in learning it they have discovered their own power. Never again, we may be sure, will the people allow themselves to be driven helplessly into war by these sinister forces. Neither will they be able henceforth to see as enemies the people of other countries who are like themselves the victims of the militarist imperalism and secret diplomacy of their rulers.

Internationalism as an organized movement may have temporarily broken down in this war. But the spirit of internationalism, the consciousness of the solidarity of peoples, the democratic vision which overlooks the artificial frontiers which keep the peoples apart, will grown stronger the longer the war continues.

In the midst of the universal horror of the battlefield something like an entente of the peoples has been established. The democracies of the world begin to understand one another. Some of the old misunderstandings and prejudices, intensified by the bitterness of the present mad struggle, may flourish for some time after the war. Old jealousies die hard, new hatreds have been born, human nature is human nature still.

But beneath these unnatural enmities, tranecending the passionate antagonisms of the hour, new forces of fraternity and good will are at work, reconciling the sundered peoples and making a covenated peace possible between them, more durable than the treaty peace that the official diplomacy will presently conclude.

In every belligerent country these healing and unifying forces have been released. Nowhere—not even in Russia—are they yet dominant; but the democratic spirit is permeating every country. Democratic conceptions are influencing the thought of every people, who see the war as the last monstrous product of the economic and social inequalities of the old order of existence which dissolves and passes away like an evil dream of the night.

Equality is the great human formula of the coming era of revolutionary change. We are moving swiftly towards a new order of society in which the idea of equality will govern the political thinking of all the democracies. The freedom and fraternity of which men have dreamed, which we desire to see established in this country and extended to every other, so that there may be no more wars, are rooted in equality.

It is not a new conception. It has inspired democratic action since democracy first took shape as an organized movement. It has been the aim of trade unionism from its earliest beginnings, though it may not have been consciously formulated. It is the aspiration of political democracy. The war has quickened it afresh and has invested it with a new significance.

Failure to appreciate the fact that the minds of the people have been deeply influenced by equalitarian ideals, to underestimate the popular resentment of class privileges, whether based on the accident of birth or upon the possession of wealth, which the war has strengthened rather than mitigated, will be fatal in the future to governments and political parties alike.

AUSTRALIA'S LABOR PARTY.

The labor movement has made remarkable progress throughout the world during the last two years. There has been a great awakening among the working class in England, culminating in the marvelous advance in the prestige of the British Labor party. There are not wanting signs of a similar awakening of labor in the United States. As yet, however, the awakening in the United States has hardly got beyond the stage where a large number of the wage earners and producers feel that some sort of political action is necessary in addition to industrial action, in order for labor to successfully fight its battles. Just what form this political action will take is at present uncertain, but there are those who favor independent political action; in other words, the formation of an American Labor Party. * * * As an aid in this discussion, the writer, who is an Australian, presents the following facts concerning the organization of the Labor Party of Australia:

Australia is a self-governing dominion of the British Empire. It is a federation of states somewhat similar to the United States. The federal prime minister and the state premiers are, for practical purposes, chosen by the federal House of Representatives and the state lower houses, respectively.

The Australian Parliamentary Labor party is some 25 years older than the British party. It was not until 1906 that a definite Labor party made its appearance in the English House of Commons. Before this date there were individual Labor members in the English Parliament, but their number was not sufficient to warrant the term "Labor party." Even now, in 1918, there are only some 40 Labor members in the English House of Commons, which consists of 670 members. In Australia, however, a definite Labor party was established in the Parliament of New South Wales in 1891, there being 36 Laborites in a house of 141 members. Shortly after this date Labor parties made their appearance in the Parliaments of each of the Australian states, and in 1901, when the six Australian colonies were federated, it was found that there were 16 Laborites in the first federal House of Representatives. During the years 1891-1909 there were three parties in the Australian Parliaments—Liberal, Conservative and Labor. During these years the Labor parties in the various Parliaments held the balance of power between the two old parties. By a judicious use of this strategic position the Labor party was able to obtain much progressive legislation. In 1909, however, the Liberal and Conservative parties decided that it was time to quit fighting one another and to combine against the common enemy, the Labor party. The Liberal Union party was formed in direct opposition to labor. Since 1909 the issue at all elections, with the exception of those held during the last two years, in which new issues due to the war have arisen, has been for or against labor. As a result of the coalition of the two old parties at the federal election of 1910, the Labor party obtained a majority in both federal houses. In 1915 there were Labor governments in the legislatures of five out of the six states and in the federal Parliament as well. The progressive legislation for which Australia is noted is due to the fact that organized labor has entered the arena of politics.

The Labor party organization varies somewhat in the different states, but the scheme followed in the state of New South Wales is fairly typical of the organization in all the states. In New South Wales the basis of the party organization is the local or district Political Labor League. A league is formed in each election district. All trade unions in the district willing to join are affiliated with the league. Residents in the district who support the party, but who are not trade unionists, can become members of the league on signing the platform of the party and on payment of a small subscription—about a dollar a year. The unions contribute so much per capita to the funds of the league. In this way the Labor party finances the political campaign of the Labor candidates at the elections. The platform of the party for a state election is drawn up by a conference, composed of delegates from every local league. The questions to be considered at the state conference are thrashed out in the leagues and unions before the selection of delegates. The conference instructs and criticizes Labor members of Parliament and elects the state executive council. This executive keeps in touch with members of Parliament and deals with all matters arising between conferences. The state conferences are convened annually unless something unforeseen occurs in the political field, when a special conference may be called. A federal conference is called every three years. The delegates for the federal conference are chosen at the various state conferences immediately preceding the federal conference. Each state sends six delegates to the federal conference. The federal conference is called only once in three years, because the life of the federal Parliament is three years. A special federal conference may be called if new issues arise.

There are no primary election laws in Australia, and political parties are not recognized by the law. At a state election in New South Wales the elector only votes for the candidate for his district. There are at most four names on the ballot paper. Each candidate may receive the indorsement of a political party, but these indorsements have no recognition on the ballot paper. Some three or four months before the state election the candidates for the Labor indorsement for a certain district are required by the party to sign the following pledge:

"I hereby pledge myself not to oppose the selected candidate of this or any other branch of the Political Labor League. I also pledge myself, if returned to Parliament, on all occasions to do my utmost to secure the carrying out of the principles embodied in the labor platform, and on all questions affecting the fate of a government to vote as a majority of the Labor party may decide at a duly constituted caucus meeting."

The caucus mentioned in the pledge consists of the Labor members of Parliament.

The names of the candidates for this indorsement are then submitted to the state executive for its approval. This approval is given unless there is some particular reason for not giving it. The names thus approved are then submitted to an exhaustive ballot of the party members in the district. If some one candidate does not get a majority a second ballot is taken after the name of the candidate with the lowest number of votes in the first ballot has been struck off the ballot paper. The third and fourth ballots are taken, if necessary. The candidate who obtains the Labor indorsement then files for the Parliamentary election. All Labor candidates must be members of a league or trade union of at least one year's standing, and these candidates are chosen in the way explained by the rank and file of the party in the respective districts.

The Australian Labor party is a people's party. In the federal election of 1914 there were about 1,050,000 votes cast for the Labor candidates. Australia has woman suffrage and, therefore, there were about 550,000 men's votes cast for the Labor candidates. In 1914 there were 523,000 trade unionists in Australia. The great majority of these are men. These unionists are members of the party. At the lowest estimate 60 per cent. of the men who vote Labor are members of the Labor party. The situation is somewhat the same as if of the 9,000,000 electors who voted the Democratic ticket in the United States Congressional election of 1916 there were 5,000,000 dues-paying members of the Democratic party. A Labor member of Parliament in Australia is looked upon rather as an instructed delegate than as a free representative. The Labor members are continuously responsible to the people who elected them.—G. E. M. Jauncey, in The Public.

POOR CAMOUFLAGE.

Perhaps one of the most abortive efforts yet made in America to discredit workmen's health insurance as "Prussian in origin" is the recent attempt by the chairman of the Executive Council of the National Civic Federation.

According to the Civic Federation's estimate of the German "so-called social insurance laws, what did they amount to? . . . The average sickness pension was $48.45 a year . . . less than $1 a week." Even so careful an organ of public opinion as the New York Times was misled by this statement into the belief that it presented the facts concerning "insurance against illness."

As a matter of fact, the "sickness pension" thus held up to scorn has nothing to do with health insurance. It is a special type of pension, under another law providing "invalidity and survivors' insurance," payable to persons who have exceeded their twenty-six weeks' period of cash benefit under the health insurance law. Under the latter act benefits for twenty-six weeks in any year are 50 per cent. of wages—equivalent to the rate of indemnity under many American workmen's compensation acts—in addition to which full medical care and medicines and appliances are given.

Organized labor of New York State is solidly behind health insurance, and will not be turned aside by misstatements.—The Industrial Weekly.

PEOPLE ARE THE GOVERNMENT.

A most deplorable incident in the national life of the United States is that the people apparently do not realize that they, themselves, are the government and their representatives of every nature at Washington are not a government separate and apart from themselves, but are merely the persons whom they choose to put into effect their (the people's) will in the matter of government. This fact should sink deeply into all minds. Blaming the other fellow for not running your own business to suit you is rather small.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Furuseth on Overtime Pay.

In commenting on rules announced by the United States Emergency Fleet Corporation, a Washington newspaper says "the overtime principle is officially recognized on the seas for the first time in history."

"That statement," said Andrew Furuseth, president of the International Seamen's Union, "is evidently written by some one who has no knowledge of the real situation.

"Extra pay for work done in port to expedite the voyage when done outside regular working hours was established in this country by organized seamen and upheld by judicial decisions more than 20 years ago. Extra pay for work done beyond the regular working hours, whether in port or at sea, when not necessary for safety, has been recognized in Norwegian and other vessels for more than 20 years.

"Seamen in this country have made no demands for extra pay for work done beyond the regular working hours since the present war started. The Shipping Board has accepted the agreements with reference to overtime work between shipowners and the Seamen's Union, entered into before the war began.

"The Shipping Board has voluntarily increased such extra pay from 50 to 60 cents an hour on the Atlantic, as the result of an agreement privately entered into between the shipowners and seamen's unions on the Pacific. The shipowners and seamen have been working toward an equalization of the pay, working rules and extra pay for overtime on the Atlantic and the Pacific in order to prevent any misunderstanding and delays of vessels that might otherwise arise through the opening of the Panama Canal.

"If the shipowners would live up to their agreement, which has the sanction of the Shipping Board, the Secretary of Commerce and the Secretary of Labor, there would not be the slightest danger of this country failing to meet the growing demand for men willing to follow the sea."

Eight-Hour Rule Stands.

Chief Justice Clark of the North Carolina Supreme Court, acting as labor umpire for the National War Labor Board, has refused to re-hear his eight-hour decision in the case of Wheeling (W. Va.) iron molders versus the Wheeling Mold and Foundry Company. This means that the decision stands and will be a perpetual nightmare to junkers who would deny workers a voice in industry.

The decision forbids the working of a molder more than eight hours in any one day, except in an emergency. A joint committee, and not the employer, shall be the judge of what constitutes an emergency.

This decision makes the so-called eight-hour day, recently established by the United States Steel Corporation, look ridiculous. In the latter case workers are denied any voice in the proceedings and must labor as long as the Steel Trust elects, and will be paid extra for over eight hours.

By Umpire Clark's order Wheeling iron molders will work eight hours a day and no more, except where the employer claims that an emergency exists. This claim must be endorsed by a majority of a committee of four, equally divided between employer and employed.

This decision strikes at the roots of industrial autocracy, and has jarred anti-unionists from stem to stern.

Walter Drew, attorney for anti-union organizations and ready spokesman for hidden forces that oppose every social advance, represented the Wheeling concern in its attempt to induce Umpire Clark to reopen the case.

Reject Phoney Labor Law.

Trade unionists in Arizona are opposing a workmen's compensation plan that copper mine owners and other large interests, together with the American Mining Congress, would write into the Arizona State Constitution. At the last convention of the State Federation of Labor it was declared that this amendment is contrary to the purpose for which constitutions exist, and that "the initiation of such a long, complicated measure in which only a portion of the population is immediately concerned is wrong in policy."

The proposal is not compulsory upon the employer, but the worker, in order to secure employment, is forced to accept its provisions. The plan provides that no information submitted by an employer shall be open to the public, but the worker is given no such protection.

The State Federation of Labor suggests if it is the desire of the companies to secure a just compensation law that they have the present measure withdrawn and a new bill, drafted by representatives of employers and employes, be presented to the State Legislature.

Workers Not Blamed for Unemployment.

Most unemployment has no connection whatever with any fault of the worker, says the Bureau of Labor Statistics in its bulletin "Public Employment Offices in the United States."

"Unemployment and irregular employment," it is stated, "occur largely because of highly developed, highly specialized and rapidly changing industries, coupled with a labor market almost completely unorganized or disorganized. More and more, intelligent people are coming to recognize that the industrial system is responsible in a large degree for unemployment, but whoever is responsible, the demoralizing consequences resulting from unemployment are so far-reaching that the State must set itself seriously to the task of prevention and cure.

"Prevention must come through regularizing seasonal and fluctuating industries, cutting down the turn over of labor and undertaking public construction work during periods of depression. The cure proposed is the public employment office.

"Even more important than the growing realization of the evils found in many private agencies is the development of the

World's Workers

Negotiations are still proceeding for the amalgamation of the British Dock, Wharf and Riverside and General Workers' Union, and the National Union of General Workers, and at a recent meeting arrangements were made for the holding of joint meetings in the principal towns throughout the country for the purpose of explaining the amalgamation scheme.

The Committee on Production have issued an award granting the operative bakers of Glasgow, Lanarkshire, Dumbartonshire and Renfrewshire an advance of 7s. 6d. per week, with payment for overtime at the rate of time and a half, but making no change in the number of working hours or other points demanded by the men. The average minimum wage of bakers in Glasgow before the present award was made was 60s. per week; this will now be raised to 67s. 6d. per week in accordance with the Committee on Production's ward.

The executive committee of the Jewish National Labor Council of Great Britain has issued an appeal to labor parties and leaders all over the world asking them to help in putting an end to the anti-Jewish massacres in Poland and Galicia by publicly condemning them. The resolution, the text of which has been received by the provisional Zionist committee in this country, asserts that the censors of Austria and Germany have been at great pains to suppress the news of many pogroms which have occurred recently in Poland and Galicia. Nevertheless, the National Labor Council is in possession of facts concerning excesses in many towns in the territory now occupied by the Austro-German armies.

The strength of the organized labor movement in Mexico is now estimated at about half a million workers. The only industries nationally organized are the mining and textile industries and the railroads. The miners in particular are strongly organized in three States. Mexican labor can now be brought into the United States for work on mines and railroads, as a result of the action taken by the Department of Labor in removing certain restrictions on labor movement from the republic to the south. An event of international importance, it is expected, will be the international labor congress at Laredo, Texas, November 13, when American and Mexican labor will confer on matters of common interest.

Nearly 5,000 returned soldiers, so much disabled that they could not return to their pre-war vocations, have been offered courses in industrial re-education by the Department of Soldiers' Civil Re-establishment, of Canada, the experience of which organization has guided the United States War and Labor Departments and the Federal Vocational Board in similar work. The largest number of men to graduate from courses in any one month was 286, last June. The total number of graduates at that time had reached 767. Only 302 soldiers have refused to take the courses offered them, and only 442 have failed to complete them. Of the 442, many were released temporarily, to allow them to engage in summer work on farms.

NOTICE.

Masters, Mates and Pilots' Association of the Pacific has opened a branch office at 529½ Beacon St., San Pedro, Cal.; Capt. H. C. Frerichs, Agent.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

Pacific Coast Marine.

Owing to the big increase in the launch business on San Francisco Bay there is now a considerable scarcity of river and bay craft. The boatbuilders are so busy with war work that it is difficult to get new vessels.

A case of smallpox at the United States Shipping Board's training station at West Seattle resulted in the quarantining of that station for the second time in two weeks, the former occasion being the prevalence of influenza.

Nearly one hundred humpback whales art having a joyous time along the California coast between San Francisco and Santa Barbara, according to reports by several incoming craft. The big leviathans played all about the ships for nearly one hundred miles and the passengers possessing cameras took snapshots. Off Point Loma some of the whales played so closely to the rocks that a small boy could easily have reached them with a rock.

Representatives of San Francisco and Tacoma port improvement associations appeared before the Port of Seattle Commission during the past week and were given full information as to existing as well as proposed projects in this district. The commission adopted a resolution condemning the Federal authorities responsible for the negligence shown in the proper marking of Alaska waters, which is blamed for the loss of the "Princess Sophia," with all on board, last week.

The loss of vessels forced upon the Matson Navigation Company when the Government commandeered so many of their big liners is now being offset by the assignment of a large number of steamers and sailing ships. Port Captain Charles W. Saunders stated during the week that the company was now operating forty-three vessels and that another was on the way. Many of these vessels are of the small "jitney" class, but the aggregate tonnage is a good deal bigger than the company ever controlled before.

During the month of October sixteen vessels loaded at the mills in the lower Columbia River district and their combined cargoes amounted to 13,352,128 feet of lumber. Fourteen of these vessels, carrying 11,800,000 feet went to points in California, while two laden with 1,552,128 feet of lumber are en route to foreign ports. In the same period fourteen vessels loaded 9,768,110 feet of lumber at the up-river plants, making a grand total of 23,120,238 feet of lumber that left the Columbia River in cargoes during the past month.

The United States Shipping Board Emergency Fleet Corporation has ordered the construction of seven seagoing towboats to be used at San Francisco and vicinity, according to report on the water front. Frank Stone will build the tugs at his east bay plant, and they will be turned out as fast as possible. At present most of the towing hereabouts is done by the Red Stack tugs. It is said the new tugs will be 150 feet in length, with thirty-foot beam and seventeen feet draft. Each will be of 1000 horsepower, with triple-expansion engine.

Two 8800-ton steel vessels were launched from Portland yards on October 26. The steamer "West Zeda" took her initial dip from the ways of the Northwest Steel Company, and the "West "Kobalt" from the plant of the Columbia River Shipbuilding Corporation. Both are of design similar to those previously constructed at the two yards. The "West Zeda" was launched at noon and the "West Kobalt" at 2:30 p. m. The two ships will be completely oufitted at their respective yards and then turned over to the Emergency Fleet Corporation to be assigned to operating companies.

Contracts are reported to have been signed for the construction in Portland (Ore.) of a steel rolling mill and plant, at a cost of $700,000, by the Pacific Coast Steel Company. The work of building is to proceed under rush orders. The first structures to be erected will be the mill building and open hearth building. They will be of all-steel construction. A number of auxiliary buildings will follow promptly. The capacity of the plant will be 250 tons daily. All manner of steel for use in shipbuilding except plates will be manufactured, and it is expected the greater part of the output will be used in Portland shipyards. Plants similar to the one to be installed in Portland are operated at San Francisco and Seattle by the Pacific Coast Steel Company.

The wooden steamer "O. M. Clark," owned by the Charles H. Higgins Company of San Francisco, was destroyed by fire in Norfolk Bay, Virginia, October 27, according to advices received by the marine department of the Chamber of Commerce. The vessel was loaded with coal and the flames burst forth so suddenly that Captain Sundberg and his crew—all shipped from San Francisco—were compelled to jump overboard and swim ashore. All escaped safely to the shore. The "Clark" is a nearly new craft, having been built at Hoquiam, Wash., in 1913. It had a length of 200 feet, 41 foot beam, a depth of hold of 14 feet and was 480 net tons. The advices do not state whether the vessel will be a total loss.

Sudden & Christensen during the past week welcomed the return of the steamer "Raymond," which was dispatched from San Francisco a few months ago with a crew of wreckers to salvage the British bark "County of Roxburg" in the South Seas. The vessel had the wrecking gear on board, and in addition 500 tons of copra loaded at Papeete. The passage from Tahiti was made in twenty-four days, the vessel calling at Honolulu. The gear was taken to the South Pacific with the intention of moving the British wreck from the sands of the beach into the deep water of the lagoon, but upon arrival it was found that the old craft had rusted so badly that it would never float after being shifted. The abandonment of the venture means the loss of a considerable fortune to the local firm.

Withdrawal by the United States Shipping Board of the Pacific Mail Company's steamships "Venezuela" and "Santa Cruz" from the East Indian and Oriental service has stirred the shipping and commercial interests of San Francisco to protest on the ground that it is a hard blow to the hopes of trade expansion across the Pacific. A campaign was begun last week to urge the Government to reconsider the order. This order, which was issued by Acting Director C. W. Cook, of the United States Shipping Board, notified the Pacific Mail Steampship Company that the two liners, constituting two important units in the American chain of passenger and freight communication between San Francisco and the Far East, has been withdrawn from the service for operation elsewhere. Both vessels were commandeered in October, 1917, and were permitted to be retained on the transpacific run with the understanding that the Government might take them off whenever they were needed.

The Hobbs-Wall steam-schooner "Mandalay," which was stranded near Crescent City a week ago and later taken in tow of the steamer "Necanicum," is now again beached at Wilson, near the mouth of Klamath River, and is breaking to pieces, it was announced in advices just received. The vessel was badly waterlogged and nearly on its beam ends when the weather became unfavorable and the tow-line broke. Before the line could be connected again the "Mandalay" was driven close to the shore and then beached in an exposed position where the big seas proceeded to break over the wreck. No hope is now entertained of saving the craft. The captain and all of the crew are safe. Hobbs, Wall & Co. will sustain the entire loss, as the insurance men here report that this firm carries its own insurance. The "Mandalay," of 438 gross tons, was built at North Bend., Ore., for the present owners in 1900 and has since that time been used as a lumber carrier. The craft is well known and this is the first serious accident that she has encountered. Captain Lofstrom was her commander for several years.

Fifteen members of the crew of the "Star of Poland," of the Alaska Packers' Association's fleet, which was wrecked on the Japanese coast, eighty miles from Yokohama, arrived from the Orient on the Dutch steamship "Rembrandt" during the week. Captain J. B. Larsen had arrived previously. The wreck resulted in the death of Seaman John Ludvigsen, who was drowned while attempting to swim ashore. The vessel is a total loss, but a portion of the cargo of cocoanut oil in cases and lumber cargo which was en route from Manila to this port has been salvaged. According to one of the wrecked mariners, the vessel fell a victim to a terrific typhoon and was thrown upon the rocky shore about a quarter of a mile from land. When the weather moderated the officers and crew donned life preservers and swam ashore. This involved a big swim, as the men had to round a point of rocks. Ludvigsen did not have a life preserver on. One of the survivors said that the American representative at Yokohama failed to supply sufficient clothing to the men, each sailor receiving but a single shirt, which had to be washed at night and dried over one of the hot-air exhausts on the "Rembrandt." He also exhibited paper-soled shoes, which were all broken up, and explained that all of the men came over the Pacific with wet feet.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, NOVEMBER 6, 1918.

RECONSTRUCTION PROBLEMS.

The great war is coming to an end.

It may take years before the internal affairs of Russia and the two defeated Central Powers can be adjusted to a real peace, but so far as our own country is concerned we shall be face to face with reconstruction problems in a very short while.

The Federal Government has a proposal for the appointment of a National Commission on reconstruction and in several States the Governors are beginning to talk about the coming period of demobilization.

Very little, if anything, has been done in this direction by the organized workers of America. Here and there a committee has been appointed to study the problem, but in the main the labor movement, in common with all America, has concentrated on the immediate issues of "winning the war."

So far as American labor is concerned there is nothing definite in the future. Unlike the British labor movement, which has concrete and well-grounded economic and political proposals for the after-the-war period, the American labor movement has scarcely commenced to give serious thought to the subject.

The employing group in America, and particularly the anti-union element in that group, seem to have certain well-defined notions as to what should take place when our fighting boys return to civilian employment. Their plan is simplicity itself. Read and digest these excerpts from a recently published statement by Mr. Stephen C. Mason, president of the National Association of Manufacturers:

> In the present period of inflation the chief gain has been to the wage-earner; and unless proper preparation is made for the after-war readjustment, the wage-earner is likely to be the chief sufferer. That portion of labor which presents a string of ever-growing demands ignores the fact that upon the conclusion of peace millions of fighting men will be ready to return to their former occupations. The supply of labor will then equal and likely exceed the demand, and those groups now in a position to make exorbitant demands will find their power gone. Once more wages will drop to a normal and reasonable level.
>
> The present period is one of abnormal prosperity for the wage-earner. Mechanics who formerly earned four to five dollars a day have increased their earnings to eight and nine dollars a day, and the standards of living have been keyed up to this income. The big question to consider is: will the people who have been enjoying the advance due to war conditions be able to adjust their standards of living rapidly to meet new conditions?
>
> It is unfair to workers to let them imagine that the present scale of wages can continue, for, under this delusion, the proper measures of economy and thrift are likely to be ignored. Far better to consider the situation at once and plan ways to meet it.
>
> It is a duty to wage-earners to make them understand the situation that is likely to confront them, so that they will not have to face it totally unprepared.
>
> The producer and manufacturer must make every preparation to conduct his business as economically as possible to meet the keen foreign competition for world markets which will begin upon the cessation of hostilities. In order that the American manufacturer may hold his own in foreign trade and in the home markets, in competition with foreign-made goods, it will be essential that his production costs be as low as possible; consequently, he can not afford to disregard the important item of the pay-roll.

Truly, here is a perfectly beautiful word-picture of what is expected by the big employers.

We all know that during the past few years the purchasing power of the dollar has just about shrunk in half and that the worker who has only doubled his wages during this period is no better off than he was before.

Of course, the vast and overwhelming majority of American workers have not doubled their wages and thus, notwithstanding seemingly high wages, they have had a more difficult task than ever to make both ends meet.

But, judging by the spokesman for the Manufacturers' Association, the workers have been the chief beneficiaries of inflation. And those who have not saved enough during this alleged war prosperity will be up against something akin to starvation very, very soon.

The great spirit of a new America, the common desire to work together to win the war for world democracy, will be swept away before we know it. If not, why this untimely rejoicing that the organized groups of workers, who have just held their own in the matter of meeting the high cost of living, "will find their power gone"! And why concentrate on wages in talking about the "drop to a normal and reasonable level."

What is this level?

Is it to be the after-the-war level of our present Comrades-in-arms when the old fierce and bitter competitive struggle for world markets has been resumed?

Surely, these are problems that cannot and must no longer be ignored by the organized workers of America. Preparedness for Peace must no longer be sidetracked or shelved.

Why wait for the National Association of Manufacturers to tell us about "the situation likely to confront us"?

Why cannot the Executive Council of the American Federation of Labor arrange for an immediate Preparedness-for-Peace conference at which each affiliated National and International Union shall be duly and fully represented?

COMPULSORY WORK LAWS.

The JOURNAL has already called attention to certain compulsory work provisions in laws enacted since our country's entry into war. Two additional States—i. e., Rhode Island and Montana—have now joined the group of States having such provisions. Besides these State laws there are the Selective Service regulations, promulgated by the Provost Marshal General, which require that draft registrants who are not actually in the service, shall be engaged in productive occupations or employments. A bill has also been introduced in Congress as the first step toward a law for the District of Columbia of a nature simliar to those of the States named.

The law of Rhode Island requires employment at some service "necessary and essential for the protection and welfare of this State and the United States," for a period of 36 hours per week, the possession of property or income being no defense. The act applies to able-bodied male residents "between the ages of 18 and 50 years," and is to be in effect on the issue of a proclamation by the Governor. On claim of inability to find employment, persons may be assigned to service on undertakings of the State or any subdivision thereof, the duty of making assignments devolving upon the Commissioner of Industrial Statistics.

Possibly the fact that Montana is an equal suffrage State accounts for the order just issued by the Council of Defense of that State requiring employment of both male and female at "some legitimate occupation" for at least five days per week for the period of the existing war.

The bill introduced in Congress, and applicable to the District of Columbia, would bring under its provisions able-bodied males "between the ages of 18 and 60 years," requiring each such person "to habitually and regularly engage in some lawful, useful, and recognized business, profession, occupation, or employment whereby he may produce or earn sufficient to support himself and those dependent on him." Possession of property is not a defense, and delinquents are to be required, as a part of the penalty for their non-compliance, to work on the public roads or streets or some other public work of the District.

Compulsory work laws like compulsory arbitration in labor disputes are scarcely justifiable among self-governing peoples, except as war measures. However, there is one great redeeming feature about these compulsory work laws. They require all, including the bloated aristocrat, to perform some really useful labor.

DEMOCRACY AND PROFITS.

While discussing the action of the United States Steel Corporation in advancing wages and granting the basic eight-hour day and, at the same time, continuing its refusal to recognize the unions, Secretary Frank Morrison of the American Federation of Labor said: "The trade-union movement insists that high wages and kind masters is not democracy."

Well said, Brother Morrison!

Democracy still has a higher aim and nobler vision than the generously well-filled dinner pail. Democracy is government by the people—in fact as well as in name!

Of course, this ideal of a real Democracy is far beyond the horizon of America's plutocracy.

The 1917 profits of the United States Steel Corporation were $457,685,000. Its pre-war profits amounted to a measly $63,585,777.

Under the circumstances why should a steel corporation magnate bother his head with the ethics of applied Democracy?

Every child sacrificed to the factory system is a potential rebel against all forms of industry.

"MENTAL RESPONSIBILITY."

The security of navigation depends a great deal upon the degree of mental responsibility of the men in charge of the bridge, and men suffering from brain fag due to overwork cannot be expected to exercise that degree of sound judgment which is the best guarantee against accidents. Glaring errors in navigation due to mental weariness induced by long hours of duty have been the cause of many shipwrecks, and now more than at any other time it is wise to bear in mind that "there is safety in a multitude of counsellors." The idea that the captain is infallible, and is "monarch of all he surveys," and that he ought not to be told that he has made a mistake, should be put out of the ways of the practical life of to-day.

This poignant comment is from the editorial pages of "Nauticus," an independent shipping journal of New York.

The word "independent" is used advisedly, because there is only "one" lone voice in that particular group of trade journals which would dare to speak of "brain fag due to overwork."

No other so-called shipping journal in America—always, of course, excepting the paper owned and controlled by the organized seamen—could retain its staff of life—i. e., its advertising patronage—in the face of such frank criticism.

All of which is a mighty fine, but well-deserved, testimonial to our most esteemed contemporary "Nauticus." May it continue to prosper and grow just as long as its editorial policy is directed along that frank, free and fearless course which has characterized that publication since inception.

The beneficial provisions of the soldiers' and sailors' insurance law have reached into the remotest corners of the United States; in millions of homes they have brought peace and comfort and material assistance that was needed. In its twelve months' existence the War Risk Insurance Bureau has written nearly $35,000,000,000 of insurance, insuring more than 90 per cent. of our fighting forces. It has paid more than 5000 death and disability claims and is paying monthly installments of insurance on more than 9000 death claims. It has paid out $200,000,000 in allowances and allotments to families and dependents of soldiers and sailors. It has given to every soldier as he went into battle, every sailor on the submarine-infested seas the assurance that those dependent on him will be cared for in case of death or injury to him.

Havelock Wilson, president of the National Sailors' and Firemen's Union of Great Britain and Ireland, is again a member of Parliament. He was an unopposed coalition candidate for South Shields. On behalf of the organized seamen of America the JOURNAL heartily congratulates the new M. P. If seamen ever needed a spokesman in Parliament they surely do so now and during the difficult period of demobilization and readjustment which seems to be close at hand. Havelock Wilson is eminently qualified to champion the cause of seamen. He has had previous parliamentary service and has been active in the British Seamen's Union practically all his life. No man has a better personal acquaintance with the trials and tribulations of Britain's hardy and courageous seafarers. More power to the sailor in the House of Commons!

The basis of the shorter workday movement is recognition of the truth that man does not live to work, but works to live.

MOBBING THE MOBBERS.

What Happened in Boise, Idaho, When "Respectable" Thugs Attempted to Break Up a Political Meeting.

Out in Boise, Idaho, which is in the center of a very large irrigation tract, the farmers have been close students of the psychology of mobs.

A. C. Townley, national president of the Nonpartisan League; Governor Frazier of North Dakota, and the league's nominee for the governorship of Idaho, H. F. Samuels, were all scheduled to speak at a big league rally recently held in the capital city. A few self-styled patriots, politicians and representatives of the Idaho power trust, clubbed together in a so-called "defense league," and issued a mandate that, while two of the men on the program might speak, A. C. Townley should never speak in Boise. A spineless mayor and the police department assumed a nonchalant attitude in the face of threatened mob law.

The sheriff of the county, Emmett Pfost, happened to be a farmer's son, who was not actively seeking reelection. Twenty-four hours after the edict had been proclaimed by the "pie-counter" bunch, 300 farmers, husky sons of toil, slipped into Boise very quietly and were sworn in as deputy sheriffs.

That night the largest theater in town was packed. An overflow meeting in the nearby park was shut down by the police. Meanwhile the North Dakota governor and Mr. Samuels were wildly cheered by an inside crowd of over 2000 people. Townley was seen in the audience and was given an ovation. "We want Townley," was contagious. The theater manager, however, refused to let him speak. The crowd unanimously voted to adjourn to the Capitol steps, one block away (which was outside the jurisdiction of the city police) and give A. C. Townley the right of free speech. If he made a seditious speech they would stop him. If he were 100 per cent. American they wanted to hear him.

A hundred and fifty would-be mobbers, the so-called "defense league," of politicians, quickly gathered on top of the Capitol steps. When Townley started to speak this mob formed a wedge like the old "flying V" of ancient football days, and started to clean up the Nonpartisan League. The long-looked-for happened. Until past midnight this group of 300 husky farmer deputies had been patiently waiting for just such a move.

These sturdy farmers had read about how their brothers in North Dakota had been told to "go home and slop the hogs." They had heard how a group of politicians had driven the Farmers' Equity Society out of Fargo, N. D. They knew of the Walla Walla outrage, where the Farmers' Grange state convention had been expelled by a bunch of plug-uglies, directed by political henchmen. That was enough.

These Boise valley farmers all agreed that no outrage like that would happen in their State capital. In two minutes it was all over, including the shouting. The farmers "mobbed the mobbers." The deputies had Nonpartisan League buttons on and knew each other. Their muscles had been resting all day. Their blood was aroused. When the would-be mobbers woke up the county jail and the courtyard and the heavenly stars, mingling with a new kind of stars, and aching heads, were all so confusing that they are still asking how it all happened. It looked like a free-for-all, but there was a system in it which justifies organization. I have seen many a football game and college scrimmage, but I never saw better team work than that exhibited by that group of farmers fighting for free speech and in defense of the law.

A representative of the power trust, Karl Paine, the leader of the defense league mob, was hustled on to jail, the son of an ex-Governor, and other politicians who led the mob, were lined up against the stone baluster by angry deputies and compelled to listen to one of the severest castigations from the lips of A. C. Townley ever heard in the city of Boise.

In two minutes everything was quiet and peaceful. . . . The farmers fairly ate them raw. The mob vanished in thin air. Five thousand farmers and Boise citizens madly cheered the outcome and then for over two hours listened to a midnight patriotic speech by Townley, delivered on the State Capitol steps. Hundreds of citizens who came there skeptical, prejudiced by rumors and the kept press, learned for the first time what the Nonpartisan League really was. The farmer deputies had read Wilson's anti-mob proclamation, had read Secretary of War Baker's anti-class hatred appeal. These farmers determined that Wilson and Baker should be obeyed. Free speech is quite logical and convincing when mobs flee from fear.

Mr. Townley is under no indictment; there is no warrant out for his arrest, and all these facts were well known before the meeting. But this typical mob determined the farmers should not have the right of free speech. They would override the law and every constitutional safeguard. This brilliant flanking success of "mobbing the mobbers" has caused all Idaho to laugh at the Boise bullies.

The next week in the election the Nonpartisan League drafted the sheriff for reelection. He

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Nov. 4, 1918.
The weekly meetings are postponed in compliance with the order as issued by the San Francisco Board of Public Health forbidding all public gatherings as a precautionary measure against the spread of Spanish influenza.
JOHN H. TENNISON,
Secretary pro tem.
Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Oct. 28, 1918.
No meeting. Shipping slow; men scarce.
J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government St.

Vancouver, B. C., Oct. 28, 1918.
Shipping fair.
WM. HARDY, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Oct. 28, 1918.
No meeting. Shipping and prospects fair.
H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, Oct. 28, 1918.
Shipping medium.
P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Oct. 28, 1918.
No meeting; no quorum. Shipping slack.
ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, Oct. 28, 1918.
Shipping good; prospects good.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, Oct. 28, 1918.
Shipping good; members scarce.
HARRY OHLSON, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Oct. 21, 1918.
Shipping good; prospects fair.
R. H. BLACKWOOD, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Oct. 31, 1918.
The regular weekly meetings are postponed in compliance with the order as issued by the San Francisco Board of Health forbidding all public gatherings as a precautionary measure against the spread of Spanish influenza. Shipping fair; plenty of members ashore.
EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, Oct. 24, 1918.
No meeting. Meetings are prohibited by order of the Board of Health. Shipping good.
LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Room 203. Phone Main 2233. P. O. Box 214.

DIED.

The official list of deaths will be found on page 11.

Two additional floating dry docks capable of taking the largest ships afloat, have been recommended for San Francisco to Washington by Rear-Admiral H. H. Rousseau, manager of the division of ship plants of the Emergency Fleet Corporation, who has been in San Francisco several days surveying the local shipping field. Additional repair facilities also are requested, although the Admiral said San Francisco already was well supplied in this respect. "You need two more large dry docks," said Admiral Rousseau. "I have made recommendations that I hope will result in their construction, although nothing definite has come from Washington yet. The docks would be capable of taking on ships of 10,000 tons dead weight." Although he denied his mission to the Coast had anything to do with the stopping of construction on the Liberty shipyard, which the Government was building at an estimated cost of $20,000,000 to construct troopships and large liners, Admiral Rousseau said he understood the work would not be resumed. "I saw a telegram to the contractors saying the Fleet Corporation had definitely decided to suspend construction work permanently," he said. The plant is not needed, he added, for the construction of cargo vessels, as the country is having trouble supplying steel for the yards now building steel vessels.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Tired of waiting for Postmaster-General Burleson to make good his announcement of more than a month ago, that all telephone and telegraph employees who had been discharged because of their union membership and activity would be reinstated, the Commercial Telegraphers' Union yesterday appealed to the National War Labor Board to bring him into line. At the office of the Telephone and Telegraph Administration the hint was given out last night that the reinstatement of the 700 men and women who have been victimized for unionism "might" be ordered very soon.

President Konenkamp of the telegraphers said to-day that the War Labor Board would hear the complaint within a few days, since it is an appeal for the reopening of the original complaint made against the Western Union Telegraph Company and the Postal Telegraph-Cable Company early in the year, which led to the taking over of the wires by the Government. The case was suspended by the War Labor Board when Burleson notified the board that he was going to reinstate the locked-out men and women. He was cited by the secretary of the board yesterday to answer the charge of the union that his promise had been a mere "scrap of paper."

It appears that active trade unionists in the wire service are still being dismissed on flimsy pretexts, and that the real reason for their dismissal can be found in the fact of their trade unionism. The 700 victims of this discrimination who have failed to secure the promised reinstatement to seniority rights and to their former work in the wire service are located in Seattle, St. Louis, Atlanta, New Orleans, New York City and one or two other places.

* * *

President Wilson has not yet proclaimed the scheme for "stabiliaztion" of wages toward which the War Labor Policies Board has been working for some months past. The Policies Board at first attempted to get the big international unions to agree with the organized employers to some plan of "standardization" of wages, but the unions could see nothing in that plan except a maximum wage, and they refused to take it up. Then Chairman Frankfurter of the Policies Board formulated, with his associates, a plan for creating a continuous board for adjustment of wages in each war industry, and a central board composed of the scheme for "stabilization" of wages the chairmen of the various wage adjustment boards, this central board having the authority to "advise" each of the adjustment boards against granting any wage that would be high enough to attract men away from other war industries.

This ylan—of which the essence is the central board which would control the

This plan—of which the essence is the action of the various adjustment boards—has now been submitted to the President. And on the seventh floor of the Labor Department building there are offices fitted up, with the sign on the door, "Inter-Departmental Adjustment Board."

To the plan, it seems, the National War Labor Board has refused to become a party. Refusal was given in an open meeting of the War Labor Board last week, at which Mr. Frankfurter was told by Mr. Taft that the War Labor Board is a judicial body, to which all awards by the adjustment boards can be appealed. In other words, the Taft-Walsh board reserves the right to increase the rate of pay granted by any of the wage adjustment boards in the Frankfurter organization, if it considers the "stabilized" wage too low.

Meanwhile, the Policies Board makes public a most important statement upon the conditions which must be maintained for the women employed in war industries. As stated in this correspondence last week, the Women in Industry Service formulated this statement, and Secretary Wilson approved it.

"By vote of the War Labor Policies Board," it says, "all contracts of the Federal departments now contain a clause requiring full compliance with State labor laws, and in each State an official of the State labor department is deputized by the heads of the contracting departments of the Federal Government to co-operate with the Federal agencies in enforcing these provisions of the contracts. . . ."

Then it sets forth the new and mandatory provisions which will be written into all war contracts. The summary of required standards includes:

"1. Daily hours: No woman shall be employed or permitted to work more than eight hours in any one day or forty-eight hours in any one week, except that in cases of emergency women may work overtime provided that the total working day, inclusive of overtime, shall not exceed the legal working day in the State and shall never exceed ten hours as a maximum.

"2. One day of rest in seven: Every woman worker shall have one day of rest in every seven days.

"3. Time for meals: Every working period shall not exceed four and a half hours, and at least one-half hour shall be allowed for a meal if the working day is eight hours or less. If the working day is longer than eight hours, at least three-quarters of an hour shall be allowed for a meal.

"4. Night work: No woman shall be employed between the hours of 10 p. m. and 6 a. m. unless the plant holds a special certificate issued for this purpose by the Secretary of War or the Secretary of the Navy, with the approval of the Secretary of Labor.

"Wages: Women doing the same work as men shall receive the same wages with such proportionate increases as the men are receiving in the same industry.

"Working conditions: Regulations with reference to shop sanitation and the safety and comfort of the workers, adopted by the War Labor Policies Board, which are not in violation of the statutes of the United States or of the State in which the work is performed, and orders issued by duly authorized inspectors for the carrying out of such regulations, shall be complied with by all contractors upon notice thereof.

"Home work: No work shall be given out to be done in rooms used for living or sleeping purposes or in rooms directly connected with living or sleeping rooms in any dwelling or tenement."

The section relating to hours of labor will not be placed in any contracts until January 1, 1919.

A series of recommendations, additional to these mandatory provisions to be placed in war contracts, is also announced. There are, for instance, the recommendation of a Saturday half-holiday, and a ten-minute rest period in the middle of each working period, without increasing the length of the working day. There are recommendations that the minimum wage paid to women should cover the cost of living for a family, just as is the case for men; also, that the employer be made to prove his case if he claims that the cost of production where women are employed on a certain job is greater than for men, and hence women should accept a lower wage than men for that kind of work. Further recommendations cover sanitary management of the shop, introduction of women into new positions, employment management, etc.

Finally, the women employed in war industries are urged to call upon the Women in Industry Service, Department of Labor, Washington, or upon the local, State or Federal agencies established to deal with conditions of labor, for any information as to the conditions in these industries.

* * *

The forthcoming conference between spokesmen of the labor movements of the United States and of Mexico, to be held at Laredo, beginning November 13, is arousing great interest, apparently, among the Latin-American workers. The Pan-American Labor Press, published at San Antonio by the American Alliance for Labor and Democracy, and edited by John Murray, Santiago Iglesias and James Lord, tells of widespread favorable comment on the enterprise. Even the Peruvian papers are calling attention to the plan for an actual Pan-American Federation of Labor, for the creation of which this Laredo conference is a preliminary move.

Murray, Iglesias and Lord have been doing a difficult and almost thankless task—thankless because so little understood in this country—in bringing the Mexican and, indeed, all Latin-American wage workers to see that they can build up as strong a labor movement as exists to-day in the United States. President Wilson is now helping them in this task. President Carranza of Mexico is not unfriendly. The Laredo conference will probably go far to increase the respect of Americans for the Mexican worker, and to make even the most blind of our American editors understand that it was the high character of the labor agitators in Mexico that made possible the triumph of the Constitutionalists and the adoption of the broadly liberal constitution under which the Mexicans now live.

This Laredo conference calls upon the world to take notice that in the view of the American worker the Mexican worker, too, is a man and a brother in the labor movement.

THE YANKEE WHALERS.

The earliest phase of American Antarctic exploration was due to the ambitious energies of Connecticut whalers, whose commercial and professional instincts compelled them to seek an extension of profitable sealing grounds. As is well known, the daring pioneer voyages of American gshermen successfully exploited in the nineteenth century even the most remote seas, and thus brought into our national coffers whaling products to the value of $332,000,000 from 1804 to 1876.

"FIFTH SENSE" AND THE SEXTANT.

Among the ideas as to navigation that have been displaced by science is the inaccuracy of most observations made with the sextant. It is very hard to make the average navigator comprehend that the sextant is not an instrument of precision and that it is of inconsiderable power and little accuracy—as astronomical instruments are rated. The reason why is that a powerful telescope with a large field cannot be fixed upon it. Power in a telescope means length, and the longer the telescope the more difficult it is to keep the sun in view, when it requires a man with well-trained sea legs to keep the instrument from wavering about over a sky space one thousand million times larger than that occupied by the earth.

In some sort, the sextant does its work fairly well for certain navigational purposes, but its use is strictly limited among navigators who understand the latest words of science. The observation of the sun at noon is made to ascertain how high the sun rises that day above the horizon of the ship's place; when that is known, as well as how far the sun is north or south of the equator, which is to be found in the nautical almanac, then the master knows the latitude of the ship at noon. The observation is the simplest possible, because at noon the altitude of the sun is changing very slowly. As the term accuracy is understood in these days of mathematics applied to navigation, such an observation depends in great part upon the mature judgment of an observer who handles the sextant so long as to be imbued with what might be termed a fifth sense.—"Nauticus."

ANCESTORS OF SUBMARINES.

Here is some interesting evidence, given by Kumagusu Minakata of Tanabe, Kii, Japan, both in a Tokyo journal and in the London "Notes and Queries," of the existence in the seventeenth century of Far Eastern ancestors of the modern submarine and ironclad (says the "Christian Science Monitor"). Kuki Moritaka was bidden by Eeyasu, during the winter siege of Osaka Castle in 1614, to build four "blind boats to stop the musketry firing from a turret which was annoying his army considerably. Kuki thereupon constructed some 'blind boats, manned them with his soldiers, advanced therewith submerged in the moat, and crushed the turret with his cannon. Thence was made known how to build a 'blind boat' as it had originally been invented by Lord Kuki." This is the evidence of an anonymous writer of the year 1700, or thereabouts.

As for the ironclad, its existence in Japanese waters in the seventeenth century is vouched for by Captain John Saris, who says in his "Journal of the Voyage to Japan in 1613": "About eight or tenne leagues on this side the straights of Semina-Segue (Shimoniseki) we found a great towne, where they lay in a docke a junke of eight hundred or a thousand tunnes burthen, sheated all with yron, with a guard appointed to keep her from firing or treachery. She was built in a very homely fashion, much like that which describes Noah's ark unto us. The naturals told us that she served to transport souldiers into any of the Islands, if rebellion or warre should happen."

WAR-TIME LABOR LAWS.

Advances in labor conservation mark the first year's war legislation, according to the annual Labor Legislation Review, just issued by the American Association for Labor Legislation.

"Congress and the twenty-two States and Territories which this year held legislative sessions," says the Review, "have almost unanimously insisted on upholding, enforcing and extending labor laws."

Most significant of the new enactments are the vocational rehabilitation laws, it is asserted. The United States has undertaken to re-educate crippled soldiers and sailors for their return to industrial life, while Massachusetts has gone a step further and provided vocational rehabilitation for the great army of workers crippled every year by industrial accidents. Special legislative appropriations were made by both the United States and Massachusetts to develop an employment service for rehabilitated persons.

The emergency employment service for war workers established on an extensive scale by the Federal Government, although developed without legislative sanction, the Association points out, will almost undoubtedly be made permanent by legislative enactment in the near future.

Further safeguards were thrown about the labor of women and children in Louisiana, Maryland, Massachusetts, New York, Rhode Island, Virginia and Wisconsin.

In the field of social insurance, Virginia became the thirty-eighth State to adopt workmen's compensation, and Kentucky, Louisiana, Massachusetts, New Jersey, New York and Porto Rico liberalized their compensation acts. Four States now base compensation for injuries on 55 per cent. of wages, four on 60 per cent., three on 65 per cent., and six on 66 2/3 per cent. In eight States official commissions have been making surveys of sickness conditions among wage earners, with a view to health insurance legislation.

SWEDISH DIVING BELL.

A rather ingenious diving bell, designed by Engineer Sven Hultin, of the Gothenburg Public Works Department, is being used for the construction of the new harbor works at that place. The essential feature of the bell is that it floats, when required, and can be removed from place to place, thus economizing a considerable amount of time and labor. The principle on which it works is exactly the same, it is stated, as that which may be observed when a glass is placed in water upside down. The bell, which is 30 ft. long and 22 ft. broad, is raised and lowered from a floating platform by four hanging screws electrically operated. As soon as the bell is down to the required level, air is pumped in and the water driven out. It is provided with a suitable entrance for the diver and special appliances for lowering cement, tools, etc. Between the outer and inner walls are tanks, which as soon as the bell reaches the proper position are filled with 96 tons of water to keep it in position. Light is provided by windows in the roof and by electric lamps.

Organized labor has need to distinguish clearly between its friends and its mere favorites.

COLLECTION OF SALMON EGGS.

The Bureau of Fisheries reports that 20,000,000 sockeye and 1,365,000 humpback salmon eggs had been secured at the station at Yes Bay, Alaska, from August 29, when collections began, to September 20. If the collections are sufficiently large 1,000,000 humpback eggs will be sent to the Maine stations for the continuation of the acclimatization experiments undertaken several years ago. Later in the year it is hoped to send a second consignment.

Salmon eggs have also been collected at the station at Afognak, Alaska, and up to August 20 the number taken was 36,926,000 sockeye and 8,697,000 humpback eggs. Plans are now in progress to ship 25,000,000 sockeye eggs to be developed at certain Federal and State hatcheries in Washington and Oregon; the remainder are to be furnished to the British Columbia fisheries authorities for the replenishment of the supply in the Fraser River watershed. About 7,000,000 humpback eggs are to be sent to the bureau's Puget Sound stations and the resulting fry planted locally.

The reformer who advances beyond sight of his fellows frequently doubles on his tracks and heads backward without knowing it.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

sense of public responsibility for unemployment. This is seen in the importance attached to this social ill by those planning conferences on the social problems of today."

The bulletin makes this comment on private employment agencies:

"One's sense of justice is offended at the thought of a willing and industrious worker being obliged to pay for the privilege of applying for a job."

Too Many Babies Die Early.

The Children's Bureau of the Department of Labor states that of the 100,000 babies who die every year in this country before they are one year old, nearly one-half die during the first month of life.

"In many tiny bodies," it is stated, "the flame of life burns so feebly at birth that it is soon snuffed out because mothers were ill or overworked or underfed during the momentous months before their babies were born.

"That mothers themselves realize that the care of the baby must start before the baby is born, is shown by their eagerness to avail themselves of information concerning the hygiene of maternity. The demand for the pamphlet on prenatal care, published by the Children's Bureau, is rapidly increasing.

"At least 15,000 mothers are lost to the United States each year from causes—most of them preventable—that are connected with childbearing. They die because they have not known how to protect themselves during pregnancy or because the surgeon is not within reach at the time of confinement, or because the doctor or midwife who attends them is careless or ignorant. Many other mothers who survive in spite of improper care, are left in a weakened condition, incapable of properly looking after the needs of their families.

"The provision of such care for all mothers would prevent a great waste to our country—a waste that makes itself felt not only in mothers and babies that actually die, but in invalid women and puny children destined for a lifetime of ill health and inefficiency."

Impressed by Co-Operatives.

Returning from a trade union organizing trip through Illinois, H. S. McCluskey, of the Mine, Mill and Smelter Workers' International Union, writes interestingly in the Arizona Labor Journal of his impressions while a visitor to the convention of the Central Cooperative Society at Springfield, Ill.

"The reports," he says, "were full of general interest and proved the necessity of the organization as the last link in the chain that the workers are forging for their liberation.

"The interest of the union movement and the cooperative movement were so closely linked together in the discussion it was difficult to distinguish one from the other. It was shown that for a cooperative store to be successful, it depended upon the stability of employment and a small labor turnover. This meant the necessity for a strong union capable of protecting the interests of its members.

"It was shown where the cooperative store is in successful operation all the merchants had been compelled to pay a living wage to their employees and establish union hours and working conditions; that the cooperative stores were the chief support of union labeled goods in the towns in which they operated, and that the union labor papers were enabled to obtain their share of the advertising from the other merchants of the communities, with the result that the combined influence of the union labor movement, with its union labels and press and the cooperative movement, with its control of the purchasing powers of its members, were not only able to reduce the unreasonable, extortionate and unnecessary increased cost of living, but was a powerful influence in curbing the profiteering tendencies of some of the other independent merchants."

Investigate Trouble Before Men are Paid.

For years trade unionists have insisted that if workers are permitted to present their grievances in a proper manner, much industrial strife would be avoided. This has been denied by employers who talked about "running their own business." The unionists' theory is now accepted by the Curtiss Aeroplane and Motor Corporation of Buffalo, N. Y., whose manager of its employes' service division says:

"It is usually a very easy matter to handle workmen if they have confidence in our sincerity. Our experience has been that they are receptive and appreciative of any effort to give them satisfaction and straighten out their difficulties."

The employment manager—Charles E. Fouhy—writes in the United States Employment Service Bulletin on the corporation's plan to reduce labor turnover by satisfying the worker before he quits.

"No employe," writes Mr. Fouhy "can be paid off without first seeing a representative of the employment department, where the full details of the case are gone over and adjustment made according to the merits of the case. We call this our labor salvage department. And why not labor salvage? We go to considerable bother and expense to salvage material spoiled in the production departments, whereas until very recently we have made no effort to reclaim one of the most important links in any manufacturing endeavor—man power.

"Through our labor-salvage work we have convinced the foremen and superintendents that it is good policy to endeavor to maintain a satisfied working force, and to see that, before a man is discharged he is given a fair hearing and every effort made to satisfy him before it is necessary to come to the employes' service division."

MOBBING THE MOBBERS.

(Continued from Page 7.)

was victorious by a three-to-one vote. The entire Nonpartisan State ticket was nominated. Even the county in which the State capital is located went for the league by an overwhelming majority. "Mobbing the mobbers," from a Nonpartisan League standpoint, is good vote-getting propaganda. It is also destined to become a very popular agricultural diversion among these many Northwest farming States.—Ray McKaig, in The Public.

The importance of the demand for "recognition of the union" may be very well judged by the amount of opposition it encounters from the employing class.

WANTED—MORE CONSULS.

Our merchant marine is rapidly outgrowing our consular service, according to Edward N. Hurley, Chairman of the United States Shipping Board, who urges that steps be taken immediately to provide facilities abroad for handling the millions of tons of shipping which will be afloat under the American flag in peaceful trade when the war is over. Mr. Hurley has made a study of this subject in connection with the developing of American merchant marine and lays the facts before the Nation so that intelligent public opinion may guide Congress when appropriations for the consular service are made this winter.

A story is told by an American consul who served recently at a Spanish port. One of his agents from another port visited him.

"Have you ever cleared a ship flying the American flag?" asked the consul of the agent.

"No, I haven't," was the reply," and if a ship had to be cleared I wouldn't know how to do it."

At Queenstown, Ireland, one of the greatest ports of call in the world, no vessel flying the American flag had touched there in more than nine years until early in 1915, when war and shipping shortage began to take American vessels overseas. This is true of many other great ports abroad and illustrates the shipping decadence which is now being remedied.

Uncle Sam expects to have 25,000,000 tons of merchant shipping within two years. Every ton that can be delivered now goes into the service to France. If peace came tomorrow and our present tonnage were scattered over the world trade routes, the consular service would be inadequate to handle our ships. There would simply not be enough men in the consulates, and they would also work against handicaps of obsolete shipping regulations, and in many cases lack of experience.

"There is no question about the high character of our consular service," said Mr. Hurley. "We have some splendid officials abroad, men who work for Uncle Sam at salaries far below what they might secure tomorrow by leaving the service and entering private employ. There are not enough of them and they are not justly compensated. Several consuls have died or broken down in harness the past year under strain of overwork imposed upon them by war conditions.

"We need more consuls and larger consular staffs. We need them to-day to carry on the increased burden of work. If we do not provide them to-day and prepare for the great growth in our merchant marine and trade after the war I fear that we shall suffer a serious breakdown. The Department of State has work for fully fifty additional men right now, and if Congress authorized such an extension of service, would find the men and send them abroad immediately. Unless Congress meets this war emergency both the Department of State and the United States Shipping Board face the danger of public criticism for inadequate service when peace comes. These departments will really be blameless, but criticism will fall upon them nevertheless.

"There are nearly 100 pages in the United States consular regulations dealing with shipping matters—the clearing of ships flying the American flag, the protection of American seamen and owners, the settling of disputes and the like. Many of these regulations are based on old treaties. Many of them are obsolete. There are differences between treat-

ies with various countries. Our consuls often lack authority to handle matters involving the interests of our sailors and ship owners. These regulations are complicated chiefly because we have had little commerce in American ships. Many of them were excellent in the days of our sailing ships, when they were established. But before we can operate a modern merchant marine we must revise, standardize and simplify this whole mass of regulations and bring them up to the efficiency of other nations' practice.

"Foreign trade in American ships will mean better service to our customers abroad than we have ever rendered in the past. It must be the American manufacturer's aim to take care of his customers in Latin America as well as he does of customers at home. We can't get trade and hold it unless we give American service. A very large part of this service will depend upon United States consuls. They will have to handle a great increase in business connected with American shipments and American ships. They will also be called upon by our manufacturers for information concerning other countries. The time to provide for this service is now, while we are building the ships. We must have more men and they should be adequately paid. Consular service calls for men with college education, plus business experience, plus facility in dealing with people, plus acquaintance with one or more foreign languages, plus technical knowledge of consular duties. We have been asking the men of that caliber to pass a stiff examination before entering the service and then sending him down to countries like Brazil, where living is more costly than in New York, and expecting him to maintain a family and a good position and the national dignity on a small salary. We are paying ship builders better wages than some of our consular employees nowadays, and I consider it one of the finest evidences of patriotism that our consuls have stuck to their posts and died in harness during these war times, when by merely resigning and accepting private positions they could have secured salaries several times as large as those Uncle Sam pays. I certainly hope that this real emergency will be made clear to Congress and action taken soon.

ENGLAND KEEPS HER HEAD!

Detailed reports from London regarding the great new Education Act which Parliament has passed, remodeling from the ground up England's entire educational system, show one striking omission, an omission upon which Americans may well ponder:

The act contains no provision whatsoever for compulsory military training.

From one point of view it is a magnificent tribute to the sound British spirit. Even in the midst of war, with Germany a stone's throw away, England can study her educational problems coolly and decide quietly to keep her schools as training centers for individualism plus service, rather than, in a panic, to sacrifice them to the Prussian system of military drill.

And it is all the more striking because England, like America, has had various strenuous organizations dedicated to the job of fastening military training upon the school system. They have been well financed and have held meetings and distributed literature showing the horrors of life without military training; they have had questions "put" in the House, and, in general, have betrayed a fine zeal on behalf of their propaganda. But H. A. L. Fisher, the Minister of Education, told a delegation from the Miners' Federation some months ago, that the Government had canvassed the question of compulsory drill for the secondary schools and had decided that the innovation had neither educational nor military value and would not be adopted.

Mr. Fisher has proved as good as his word. The Education Act, which sweeps out of existence eleven Educational Acts and repeals parts of eleven others, provides for compulsory education up to fourteen years. Between the ages of fourteen and eighteen all English boys and girls must attend either the regular schools or, if they are obliged to work, then they must attend continuation schools and their employers must help to make that school attendance possible. Physical training is provided without stint, but of military training there is not to be a trace.

England certainly has a quality all her own!—From the American Union Against Militarism, Washington, D. C.

It is always more difficult to end wars than to begin them, and those who despair of any end to the present conflict may recall, with some comfort, that General Botha met Lord Kitchener many times towards the conclusion of the Boer war before a final agreement was reached. At one of these fruitless meetings Botha caught Kitchener very prettily. As he arose to leave, with matters still unsettled, Kitchener observed smilingly: "There's no hurry. You haven't any train to catch." "That is just what I have," answered Botha. Kitchener recalled this remark next day when he received a report that the Boers had carried out a successful raid only a few miles away, and had captured a British armored train on the Delagoa line.

Labor News

The City Council of Kansas City has checked wholesale resignations by municipal firemen because of low wages. The city dads pledge themselves to award substantial increases at the beginning of the fiscal year. The fire fighters have been insistent in their claim that $100 a month was insufficient to support their families and clothe themselves as befit this dangerous calling.

Major General Williams, chief of ordnance, has notified all branches of his department that inspectors of the United States Public Health Service must be admitted to ordnance plants in the interest of sanitation, health and mechanical safety. Persons representing themselves to be inpectors of the Public Health service should carry a photographic identification pass and letter from a responsible officer of the Public Health Service or the Ordnance Department, addressed to the plants and stating the purpose of the visit.

Under the law of Colorado it is illegal to strike unless the matter is first presented to the State Industrial Commission. Organized bindery girls have negotiated for three months in an effort to raise wages. The girls finally decided to take charge of affairs and run the risk of being jailed. They "forgot" to report for work one morning and before that day's sun had set the employers accepted a new scale of $15 a week for skilled women binders and $18 for forewomen. The old rates were $13.50 and $15.

The Minnesota State Department of Labor and Industries' report on industrial accidents for September includes one fatal accident to a woman who was employed in a saw mill, the first fatality to a woman who has replaced a man in an essential industry. The total number of accidents for the month show a reduction from the high mark of August, 2525, as compared with 2888. The metal industries were chiefly responsible for the reduction. It is possible that the Federal Government's safety program is beginning to show results.

It was necessary for representatives of the Department of Labor to acquaint the West Virginia Aircraft Company with the Government's labor policy before the management came down from its "high horse." Carpenters were forced to work nine and one-half hours a day and when they attempted to protest their committee was denied recognition. To force matters they refused to work longer than eight hours and the company locked them out. Government representatives secured a settlement which established the eight-hour day with pay for overtime.

Leaders of the "Loyalty" league mob that deported 1200 Bisbee (Arizona) miners a year ago last July have lost their first fight to escape punishment. The mobbers have retained an imposing array of legal talent. These attorneys centered their fire on the indictments, which Judge Lockwood of the Superior Court was asked to invalidate on the ground that the law requires the signatures of attorneys to be written thereon, but in this case they were printed. Judge Lockwood ruled that the printed signatures are sufficient, as that complies with the spirit of the law.

INFORMATION WANTED.

The members of the crew of the S. S. "Grayson," who rendered salvage services to the "Lowther Grange," will please communicate with S. B. Axtell, 1 Broadway, New York, N. Y., for their share of salvage money. 1-30-18

Hans Herman Hansen, a native of Bornholm, Denmark, about 30 years of age, last seen at San Francisco, Cal., in 1914, is inquired for. Any one knowing his whereabouts please notify his sister, Mrs. Marcher; address, Modesto, Cal. 3-20-18

INFORMATION WANTED.

An appeal has been taken by the owners of the Bark "Portugal" from the decision of the Federal District Court in the matter of salvage award of $30,000 recently made and referred to in these columns. The determination of this appeal may be a matter of six months. Seamen who wish to get their money as soon as possible should communicate with Silas B. Axtell, Attorney, One Broadway, New York, in order that I may send them a power of attorney form to be signed, which will be required by the court before the money can be paid out. The crew, of course, are sure to get some money and they will probably get their portion of the amount awarded by the lower court. It seems quite possible that the decision of the lower court will be affirmed. 7-24-18

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

The following-named men, who were on the "Costa Rica" on her recent trip from Borneo to Honolulu, will please call on F. R. Wall, 324 Merchants Exchange Building: S. Veal, C. O. Hansen, H. Kaspersen, B. E. Johannesen, K. Andersen, S. Olsen, H. Helliksen, O. Ekquist, J. Malee, Carl A. Bodin, Ernest Bozzini, M. McCloskey, A. D. Williams, J. C. Whittle, Swan Bylander, N. P. Christensen, J. Knutsen, W. A. Parris, H. Svard, J. R. Magee and Manuel Guerra. 6-19-18

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City. 7-24-18

You Want the Truth
This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.
LA FOLLETTE'S MAGAZINE
will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.
Send in your order today.

INFORMATION WANTED.

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City. 6-5-18

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

William O'Keefe, who has not been heard from in many years, is inquired for. His niece, Catherine Lynch, aged 12, is very anxious to locate him. Anyone knowing his whereabouts, please notify Catherine Lynch, 42 Monroe Street, New York City.

Home News

The Canadian Government, which once thought the forests of that country inexhaustible, finds it necessary to conserve its resources. The Forestry Branch of the Department of the Interior is recommending a survey of the timber still standing in Eastern Canada, and an examination of the cut-over lands with a view to reforestation.

Lunch centers in New York public schools will become a part of the city educational system if plans discussed by the Board of Education are carried out. It was reported to the board that lunch centers are desirable. The board recommended that $50,000 be included in next year's budget for this purpose and officers were instructed to prepare a resolution to accompany the report for presentation to the board of estimates.

The Arizona State Council of Defense has suspended its order of August 15 making it compulsory for Arizona merchants to place the cost price and the selling price upon all their goods. The council has refused to make public the roll call vote on its suspending order, although the Attorney General ruled that "these matters are public records and should at all times during office hours be open to the inspection of all persons desiring to see the same."

Stories that the Michigan State penitentiary, located in Jackson, made $300,000 last year and is self-supporting are doubted by Warden Hulburt. In fact, the penitentiary executive would like to see the color of this money, and has notified the board of control that the prison is not self-supporting, and that the State must aid it financially. "The former administration," said the warden, "had been so crazy to make money that proper precautions were not taken to safeguard the health of inmates."

Manufacturers, supply dealers and all others identified with the building industry of New York City are cautioned not to contract for or to issue any building material for non-war construction work in New York without a Federal license obtained through the Mayor's Committee on National Defense. No non-essential construction work of any nature, no matter how small or how large, or how much capital is involved, will be allowed until an application to start the work has been investigated and its merits as a material aid to further the nation's victory in the war is ascertained.

In an address at Easton, Pa., George W. Geiser, former District Attorney, said that the practice of "cheap politicians furnishing the names of jurors to the jury commissioners was all wrong." He suggested that questionnaires be sent to all voters, who would return them to the county seat under oath, with their names, ages, occupations, physical condition, and state the periods when they could serve on juries without inconvenience. This plan, he said, would keep out of the court "the deaf, dumb and halt" and those who are unable to understand the English language, and that farmers would not be called upon to serve during the planting and harvesting season, and business men during the holiday season and the inventory period.

Domestic and Naval

A fleet of three barges and a towboat, the first of the Government freight boats on the Mississippi, is now plying between St. Louis and New Orleans, a distance of 1200 miles. Thirty more boats have been ordered built as the trade grows.

Provost Marshal-General Crowder on November 1 called 1100 men for service in the navy, to entrain from sixteen States and the District of Columbia by November 9. Volunteer inductions will be accepted until November 5, after which, if necessary, draft boards will fill the quota by summons under the arrangements for applying selective service to navy and marine corps requirements.

The United States War Trade Board has, by a new ruling, authorized the importation of corn from the River Plate, upon the conditions that shipment shall be made from River Plate ports, that the corn shipped shall be purchased by and for the account of the Food Administration Grain Corporation, and that such shipments shall have been agreed upon jointly by the United States Food Administration and the United States Shipping Board. This ruling modifies the list of restricted imports No. 1, item 18, prohibiting such imports.

The control of the seas by the Allies is so complete that underwriters, early in the war, were forced to recognize the conditions imposed by the extension of the theory of ultimate destination and the underwriter when considering the risk of capture or destruction by the Central Powers. But the assuming by belligerent governments of the control and distribution of raw materials has virtually eradicated the former factor. At the commencement of the war, following the old international practice, contrabrand lists were issued by each government and the underwriter had to consider very carefully not only whether the shipment insured was absolutely contrabrand but whether if conditional contrabrand the consignee was such or its ultimate destination was such that the courts would consider it contrabrand.

In former wars a vessel was boarded at sea and examined, and if found to have papers in order and no special ground for seizure, was at once released and proceeded upon its voyage, the search in itself bringing no particular hazard. During the present war vessels destined for neutral ports have been taken into a belligerent port for search. In some cases the vessels have been taken in under arrest; in other cases, to avoid trouble of arrest, vessels have been routed via these ports of search. The entry into an additional port carries with it certain additional marine hazards, even in times of peace; in time of war there are not only these hazards, but the additional hazards caused by the removal of lights and the hazard of mines, and when a loss occurs during the entry or leaving of a port of search, and many such losses have occurred, there has always arisen the question as to whether the loss is covered under the war risk provisions of the policy or under the marine.

INFORMATION WANTED.

About September 5, Danish seaman Andrew Jacobsen, aboard S. S. "Fred Barter," then loading at Rolling Bay, Wash., met with an accident resulting in his death; witness to accident please communicate with Danish Consulate, 409 Mills Building, San Francisco, Cal., or with Danish Vice-Consulate, Seattle, Wash. Advt.

INFORMATION WANTED.

Anyone knowing the whereabouts of Daniel Shean, last heard from at Cleveland, will kindly communicate with his brother, Richard Shean, 7014 Cedar Ave., Cleveland, Ohio. 11-6-18

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Anyone knowing the whereabouts of Woodley Ransome and Charles Bland, who were members of the tug "Virginian" when she was damaged by the "Navy Tug No. 4," will kindly communicate with Arthur Jones, Agent, Marine Firemen's, Oilers' and Watertenders' Union, 513 Main St., Norfolk, Va. 11-6-18

Members who were present at the time when W. Bodie met with an accident on board the S. S. "Eastern Sea," last July, are requested to communicate with the above named comrade, P. O. Box 65, Seattle, Wash. 11-6-18

News from Abroad

Among last week's happenings, not the least in order of importance was the surrender of Turkey. The Ottoman empire is now in allied hands, and its future depends upon allied decision. Some talk was made of Turkish bargaining to the detriment of Armenia; but in view of the surrender terms, which included occupation of the Dardanelles, it is to be doubted if Turkey was so much as heard at the armistice conference.

A new political group, called the Radical Council, and formed by a number of Liberal and Radical members of the British Parliament, has recently issued its manifesto. Its proposals for social reconstruction after the war include a capital levy, retention of the excess profits duty in an appropriate form, a tax on land values, reform in the assessment and collection of income tax, revision of the death duties, and above taxes to be accompanied by complete free trade, and the consequent abolition of the breakfast table duties.

The task of the American army engineers in France in constructing railroads, docks, hospitals and other aids in the care of the army far exceeds in magnitude the building of the Panama Canal. Ten miles of docks have been built, and twenty miles more are needed. An average of three warehouses a day are put up, each 500 x 50 feet in dimensions. On one day during the past week 36,917 tons of freight were discharged from American ships at all French ports, and 11,438 tons at a single port. These are announced as record feats in the handling of cargo.

The "surrender-or-die" terms of the allies have not yet been given in words to Germany, but they are written on the allied sword. British, French, American and Belgian troops continued their merciless pressure against a Germany fighting perhaps better than at any other time during the war. It was the last resistance of a despairing army led to the slaughter by the thought that its sacrifice might mean better terms for Germany. The British scored a big victory at Valenciennes; the French pressed forward near Guise, and the Americans on the Meuse won greater real glory, even if less spectacular success, than in previous drives.

Pan-German world dominion has become the bitterest jest of all time. Mitteleuropa is a vanished dream. The Berlin to Bagdad railroad is now a little suburban spur track running from Berlin to Bodenbach. The full harvest of allied victory may take a few more days to reap. There is still a strip of German grain standing along the western front, and some Bolshevik sheaves have not yet been reached by the reaper; but the Bulgarian, Turkish, Austrian and inland Teuton crops are cut and waiting to be stacked. To the total result every allied belligerent has contributed a share; but it was reserved for Italy, hitherto the severest of the sufferers in the way of military reverses, to deal what was practically the death blow to effective enemy resistance. Despite the most unfavorable weather conditions, the Italians launched a fierce offensive, and in a few days literally swept the Austrians off their feet, capturing more than 100,000 prisoners, recovering hundreds of towns and administering merciless slaughter to the invader.

BUY WAR SAVINGS STAMPS

With the Wits

The Apparel Doesn't Always Proclaim the Man.—First Officer (in spasm of jealousy) — Who's the knock-kneed chap with your sister, old man?

Second Officer—My other sister.—Punch.

Cooperation.—"Why did you put up your city hall to look like an ancient castle?"

"Well, the movie people pay a good bit of taxes here, and they said it would be a great help in filming medieval scenes."—Pittsburg Sun.

Tramp — Kind lady, would yer please give a pore man a bite to eat?

The Lady—What! You here again? I will call my husband immediately.

Tramp—Excuse me, lady, but I aint no cannibal. I bid yer good-day.—Boston Transcript.

"Cleopatra! Cleopatra!" called little Jessie, who liked big names for her pets. "Why, I thought your cat's name was Napoleon," protested the visitor. "He was Napoleon till he had his kittens," affirmed Jessie, stoutly.—Tit-Bits.

Uncle Ezra Shucks says: "Another thing I like about my flivver is that it never gnaws its trough the way a horse or mule does. An' I don't never have to build a fire under it on a cold mornin' to make it move forward just far enough to burn the buggy up."—Florida Times-Union.

"Do you believe everything you see in the newspapers?"

"No," replied Senator Sorghum. "If some mistakes didn't get in now and then there'd be no use of my doing so much work from time to time to get campaign stuff into their hands."—Washington Star.

It was a portly but very polite person who sat next to Jones in a railway station. "Pardon me," said he to Jones, "but what would you say if I sat on your hat?"

"Suppose you sit on it and then ask me," sarcastically suggested Jones.

"I did," said the portly person, imperturbably.—Judge.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

CHRISTENSEN NAVIGATION SCHOOL — ESTABLISHED 1906 — S.F. CAL.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 10. SAN FRANCISCO, WEDNESDAY, NOVEMBER 13, 1918. Whole No. 2512.

ESSENTIALS OF SEA-POWER.

An Adequate Force of "Real" Seamen Necessary to America's Future.

Sea-power is in the seamen; vessels are the tools of seamen; tools ultimately belong to the races or nations who can use them. The histories of the Hansa League, of Venice and Genoa, of Spain and Portugal, of The Netherlands and of England need but to be mentioned in order that this may be appreciated to the fullest extent. Sea-power was with the Norsemen until the black plague depopulated those countries. It passed from those countries to other nations who could furnish men. The nations in turn kept it as long as they could furnish the men from their own people. When they had to seek men elsewhere the tools of the seamen—the vessels—went to the people from whom the men came.

This has been the contention of the International Seamen's Union of America since its inception. It was this argument which won over a group of real Americans in the long and bitter struggle for the enactment of the Seamen's bill. Senator Duncan V. Fletcher, of Florida, was one of that group. That he understands the issue is clearly shown by the article from his pen, printed on this page.

We can never succeed in establishing a creditable mercantile marine under our flag unless we arrange to furnish the men to sail the ships.

We can do that readily when we assure the men fair treatment, wholesome and healthful surroundings, reasonable compensation for services and certain advancement for faithful and efficient performance of duties.

The American boy for many years past has found nothing to invite but everything to discourage him when he looked toward the sea. He has been driven to other occupations even when his taste and yearning urged him to "do business on the great waters."

The seapower of any nation depends mainly upon the number of trained seamen that nation can furnish. It is the part of wisdom to foster in every way the development of seamanship and make attractive to those who turn to it as a permanent occupation, the life of a mariner.

Before the days of Solomon the merchants of Tyre were operating ships and extending the trade to the then known regions. Their supremacy on the seas passed, after supporting dynasties and building cities, by the use of ships, to Greece, then to Italy, then to Portugal, then to Spain, then to Holland, then to England, and finally to the United States in the days of the Baltimore Clippers.

We threw away the proud title of "The Mistress of the Seas." We deliberately allowed this country to become a "beggar of ships," and, with our commerce paralyzed, a "fettered and embargoed trafficker"; we changed the word "mistress" to "vassal." I do not think we will be guilty of such folly again. We adopted the policy of neglecting our seamen, finding crews wherever they could be had for the least money, taking the foreigner stranded on our shores, picking up the derelicts, treating them outrageously, until the wod "sailor" became a by-word and a reproach. Until the Act of December 21, 1898, seamen could be imprisoned for leaving an American vessel in an American port and held against their will, to service. Until the Seamen's Act which became effective as to foreign vessels in August, 1916, under treaties denounced by that Act, seamen on foreign vessels could be arrested and imprisoned by our courts for leaving their vessel. It was not until that Act went into full effect that all seamen were set free in this country.

By Act of Congress approved June 26, 1884, American shipowners were permitted to discharge a crew hired in an American port, employ another crew in the port in which his competitor hired his, come to the United States and go back to a foreign port without re-shipping in the United States and thus escape the American wage rate. The crimping system was in full play and the seaman was robbed. The forecastle, where he lived with men of all races speaking languages he could not understand, inadequate as to space and ventilation, was a foul, disease-breeding place.

The wages were based on the lowest paid in any port he touched and left him nothing for his family.

There was no prospect in such a life. No wonder the American left the sea. We can well understand why more than 60 per cent. of the officers and men in our merchant marine in 1915 were not citizens of the United States.

It was not until March 14, 1897, that Congress passed a law requiring that the forecastle must be improved. Every maritime nation had long since required the same thing.

The Seamen's Act of March 4, 1915, was the first emphatic declaration by Congress that the rights and interests of our seamen should have recognition and be maintained. The old policy drove Americans off the ocean. It knocked our sealegs from under us.

The new policy is to call our men back and say to them, "You shall be treated as decent citizens; you are invited not only to a legitimate but an absolutely essential occupation, where your rights must be respected; you shall be assured of good living conditions, space in the forecastle shall be increased from 72 cubic feet per man to 120 cubic feet, with further provisions for health, cleanliness and comfort; the crimping system is abolished; advance wages and allotments, by which seamen suffered great wrongs, are prohibited; you are free men and can have one-half of the wages earned and not paid in ports of call thus enabling you to protect your liberty."

A reasonable scale of food is provided, not, however, as claimed, materially better than the scale of British, French and Norwegian vessels; the wages and number of men carried are somewhat greater than in other maritime nations, but other nations must come to the American scale of wages as they are now doing, although in some instances under protest.

When they find their sailors leaving them in American ports in order to obtain American wages they will pay these wages and we will soon equalize the cost of operating American and foreign vessels through raising wages instead of by the old method, under the formed policy, of lowering wages to the point of causing men to abandon the sea.

A new day has dawned for American shipping and greater opportunities than ever before have come to American boys on the sea and those old "salts" who cling to the life will rejoice to see it brighten and all must realize that the officers and men in the American Merchant Marine are rendering unsurpassed service to their country.

Human life and property are in the hands of these men. The prosperity and even the safety of this country rests with them. They must know what to do in case of storm and danger. There is no mercy in the angry elements. There must be discipline without cruelty, control without tyranny, coolness without indifference, courage without recklessness.

I recall that when the "Titanic" was sunk, the wireless operator who survived testified that he remained at his station until the sea washed him away as the ship went down by the bow. I asked him at the hearing why he did not get into a lifeboat or jump to some raft before then. He replied that the captain had told him to take his position by his apparatus and endeavor to send out distress calls as long as he could and receiving no further orders he remained there until the ship went down. That is the kind of stuff the seafaring man, to succeed, must be made of.

We have the material for an adequate personnel and we are bound to have sea-power to an extent never before enjoyed, and as a basis for that, we must have trained and capable seamen from our own population.

PLEA FOR WORLD BROTHERHOOD.

The following meaningful paragraphs are selections from the President's report to the recent British Trades Union Congress at Derby:

"In offering you the welcome of the fiftieth annual Trade Union Congress, I feel that we are entitled to congratulate the delegates on having attained our jubilee under circumstances that, in spite of difficult, disheartening, and uncongenial industrial and economic influences and conditions associated with four years of a world war, finds us numerically stronger than we have ever been since the trades union movement was initiated. We have with us to-day 879 delegates, representing 4,531,985 members. The satisfaction we experience from the knowledge of our numerical strength is intensified by the feeling we have that as our movement has grown in numbers it has extended in influence of an ennobling and elevating character, and in all that tends to make men and women better citizens, and to give them higher and more human conceptions of the object and purpose of life, and of the true purpose and value of Labor. . . .

"It may be thought futile, and probably is, to argue after four years of war as to the immediate causes of the present conflict, so far as that argument would help us in the effort to staunch the flow of blood and terminate the unparalleled sacrifice of human life; but this much may be said, that, with all its horrors, even this will not be the last war unless the democracies of the world make up their mind to take the sceptre from the hands of those who in the past have had the power by devious, secret, and questionable diplomacy to unsheath its sword in its awful slaughter, and act themselves as the deciding factor in all matters that so vitally affect their welfare and their very existence.

"I firmly believe that whatever may have been the causes of the outbreak of this war, the peoples of Europe, who are necessarily the chief sufferers from its horrors, had themselves no hand in it. That is the initial declaration in our War Aims Memorandum, and I am confident its truthfulness cannot be disputed.

"It is impossible to express anything but horror and detestation for such inhuman actions as those of the 'Lusitania,' the execution of Nurse Cavell and of Captain Fryatt, the sinking of the 'Llandovery Castle,' and all the other murders and atrocities that have been committed since the war started.

"All war is cruel and inhuman in a greater or lesser degree, and our aim should be to get the peoples of the world to reason together, rather than to slaughter each other, as a means of settling their disputes. That is why I advocate internationalism between the workers of the world. So long as the workers allow themselves to be divided, war will always be possible. If those who have to do the bulk of the fighting and make the greatest of the sacrifices in every nation could have a deciding voice in the issues of peace and war before war started, it is probable we should have had fewer wars than we have had in the past, and even this war might have been avoided. In making that statement, I intend its full significance to be appreciated by the workers in enemy countries, as well as by the workers in the countries of the Allies.

"What is past is past; it is beyond recall. The war has had its awful losses, and the terrible thought overtowering all is the knowledge that some of the things many of us have lost can never be restored to us in this world.

"Yet we must not despair. We must do what we can to secure for those who have to live after us immunity from war such as we have known it: The world must realize now, as it never realized before, the blessings of peace. The greatest purpose to which we can dedicate our lives is the maintenance of peace and the ridding of the world from militarism.

"Speaking before the Sovereign, the Peers, and the Commons, recently, one of the most highly placed prelates of the Church, the Archbishop of Canterbury, warned us 'that the high ideals and aims to which we proclaimed our fealty at the start may degenerate into a poisonous hatred, running right counter to the principles of a Christan creed, and which, once its roots get a firm place in our lives, may corrupt and defile them with a horrid miasma, transforming what was a righteous, yea, a wholesome, wrath against wrong into a soured and unvenomed hatred of whole sections of our fellow men.' 'That peril,' said the Archbishop, 'is no mere vague possibility; it exists.' That is a plea for a peace atmosphere that I unhestitatingly welcome and endorse.

"Let us divest ourselves of the bickerings that have divided us, as workers, as the consequence of the war, and lift our minds above the clouds of doubt, suspicion, and dissension that have blurred our vision and warped our judgment, and in the higher, clearer, and purer atmosphere we shall discern the true goal of our aspirations and ambitions, and the industrial Canaan towards which we have wended so long and so laboriously.

"World brotherhood may seem farther away to-day than ever. In spite of that, I shall still look towards it as the salvation of the world and the only hope of the workers."

GROWTH OF BRITISH NAVY.

The personnel of the British Navy has grown from 146,000 on August 3, 1914, to 406,000 in August last. The fleet, including the auxiliaries, has increased from 2,500,000 displacement tons to 9,500,000 tons. From the outbreak of the war 21,500,000 troops have been transported, of which number 4391 or .020 per cent. were lost.

For the requirements of the British naval and military forces, over 86,000,000 tons of stores were transshipped, while over 24,000,000 tons were taken overseas for the Allies, making a total of over 114,000,000 tons, and, in addition, transportation was provided for over 200,000 animals.

Since the commencement of the convoys in March, 1917, there have been 75,929 sailings, the total number of losses being a few hundred.

For artillery, automatic rifles, and small arms, and for ammunition for them, we have spent over $3,700,000,000. All Liberty Loan subscribers helped to arm our soldiers.

BULLION ON "PRINCESS SOPHIA."

The money loss in connection with the sinking of the Canadian Pacific Railway passenger steamer "Princess Sophia" pales into insignificance as compared with the loss of life, which is easily the worst ever recorded in Alaskan waters, where navigation is dangerous and aids to navigation so scanty.

As already reported in the JOURNAL, the "Princess Sophia" was lost in the Lynn Canal on a voyage from Skagway to Vancouver after striking on Vanderbilt Reef. The loss of life is estimated at 343 souls, including a crew of 75. The vessel herself was of 2,320 tons, built on the Clyde in 1912. She was originally insured on a value of £51,000, all of which was placed in London, but, as usual with vessels on this run, much of the insurance on the cargo is placed in the San Francisco and New York markets. This is said to have included gold bullion to the extent of $1,000,000 or more. The run on which the "Princess Sophia" came to grief is so dangerous that it seems a marvel there have been so few casualties in recent years. It is the risk of fog which is the greatest danger in the waters of the inland passage as far as Skagway. The steamers have to thread their way in narrow gorges, through which the current runs often with alarming velocity, and where a mistake in direction may mean the total loss of the vessel, for deep water soundings abound. In the case of fog there are no shore guns or horns to warn the navigator of danger, and he has to rely entirely on guessing his distance from the shore by blasts from the steam whistle.

If the reports about the gold in the "Princess Sophia" prove true, there will be a fine chance for the salvors. The insurance of specie and bullion has proved on the whole very profitable to underwriters, and in the few cases when ships sank or were wrecked with large amounts of gold and silver on board, almost all was recovered. One need only mention the Spanish liner "Alfonso XII" and the P. & O. liners "Oceana" and "Delhi." But vast amounts of treasure remain buried in the sea. Many legends are accepted as gospel truth in this respect by the people who subscribe to wild-cat treasure-salving enterprises. A well-authenticated case, however, is the British frigate "Lutine," lost off the island of Vlieland in 1799, while on passage from London to Hamburg. According to the records at Lloyd's, the gold and silver bars on board consigned to German banking houses were valued at £1,207,000. They were intended to cover payments of currency to the British army in Holland. The Ward liner "Merida," which sank off this coast some seven years ago, had a large consignment of silver on board, which has never been recovered.

THE FRUITS OF VICTORY.

The great European war is over, but the universal and eternal struggle for bread is still on. Problems no less vital than prosecution of the war still face the nation. If we are to reap the full fruits of victory, our policy of reconstruction must be formed democratically—by all the people and not by a few politicians who act only in the interests of the wealth of the country.—Oregon Labor Press.

The larger the wage by the "piece," the smaller the wage by the "whole."

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

"No-Politics" Rule Modified by McAdoo.

Director General of Railroads McAdoo has modified his "no-politics" order of August 31 last, which barred railroad employes from all forms of political activity other than voting and holding office on a local school or park board.

The Director General says the purpose of the August 31 order was to extend "to officers, attorneys and employes in the railroad service of the United States substantially the same regulations as to political activity which have been applied for many years through civil service laws and executive and departmental orders and regulations to other employes of the United States."

It has developed, however, that many communities are composed largely of railroad employes and that the "no-politics" order would deprive them of proper civil administration of such communities.

The order as modified permits railroad employes to hold municipal office where same will not interfere with their employment. The positions of notaries public, members of draft boards, officers of public libraries, members of school or park boards and officers of religious and eleemosynary institutions are not construed as political offices.

No officer, attorney or employe can be a member of a committee that solicits funds for political purposes, acts as chairman of a political convention or assumes the conduct of a political campaign.

Summed up, the modified order permits employes under the railroad administration to only hold municipal office, if such office does not interfere with their work. They are not permitted to aspire to any other office, except in the cases noted above. Practically every other form of political activity except voting is denied them.

The Director General of Railroads expresses the hope that the railroad employes will accept this modification because they "have given ample proof of their loyalty to their Government," and "they are the same regulations in their general scope and application as all other Government employes have lived under for many years without the loss of any essential rights and with added dignity to their citizenship."

More Than Business.

The Atlanta, Ga., Journal of Labor resents the theory that the Labor movement is a "cold-blooded business proposition," and takes a sly dig at unthinking trades unionists who occasionally express this sentiment. The editor of the Journal of Labor says:

"Employers who persist in contending against organized labor fool themselves into believing it is merely a business proposition—involving only dollars and cents, and that when they temporarily win over the workers they have saved some money in the matter of wages. This is a sad mistake that time alone will cure. The labor movement is only incidentally a movement for raising wages—only incidentally a cold business proposition—it is, on the other hand, a psychological movement, a spiritual growth, a humane impulse. The activities of the labor movement spring from the highest and best in the hearts and minds of its members.

"The best thought of the world is coming to the labor viewpoint. Dollars-and-cents value will not always control."

Wild Opium Yarn Denied.

The War Department denies wild rumors of drug addicts in the army and among rejected registrants. Army officials say:

"Statements that at least 1,500,000 persons in the United States are drug addicts; that 1,000,000 such persons are known in their respective communities, and that in New York alone the number of drug addicts between the former draft ages of 21 and 31 was estimated at 200,000 have been current. It has also been said that men included in the draft subsequently develop the drug in order to avoid military service.

"The records of the Surgeon-General's office show that of a total of 990,592 men examined in the draft up to December 31, 1917, a total of 403 were rejected for drug addiction. To these men may be added 76 men discharged for drug addiction after induction and enlistment in the service. The latter number includes National Guard, National Army and regulars. From the figures given it may be said that there is no evidence in the possession of the War Department to show that there is an excessive use of drugs by enlisted men and officers of the army. The ratio of rejections from the draft represents one rejection in about 2500 men."

W. U. Loses Nothing by Federal Control.

By an agreement with the Post Office Department and the Western Union Telegraph Company the interests of this concern, which is now under government control, are fully protected and dividends will continue their uninterrupted flow. The government, according to a published statement by President Carlton of the company, agrees to pay all interest on outstanding bonds, all dividends and interest payments due on stocks and bonds of subsidiary companies, all taxes and operating charges and in addition $8,000,000 annually to insure the present rate of dividends on the company's stock.

"Viewed in every aspect the contract is a fair one to the telegraph company and the government," says President Carlton.

"The contract leaves to the company all its nonoperating income and the income from its eight transatlantic cables. The government likewise to carry the plan of the company for pensions for employees, disability and death benefits, and also maintain all reserves for depreciation and amortizations upon the same basis as the telegraph company has maintained them. The Government further provides for the continued maintenance and operation of the property as efficient a condition as when taken over and the return of the property to the telegraph company in such a condition on the termination of Federal control.

"The telegraph company will loan each

World's Workers

By mutual agreement of both parties in the dispute as to the conditions of employment at the Cooperative Wholesale Society's printing works at London, England, the matter has been referred to the Ministry of Labor for arbitration.

The British Committee on Production have issued an award providing for the war advance of 25s. a week paid to drivers (horse and mechanical), stable and garage hands, mates and trailermen 18 years and over in the carting industry, to be increased to 30s. a week, with proportionate increases in overtime rates. Where agreements or awards already exist providing for the same rates to be paid to women as to men, such agreements or awards are to hold, and increases are to be paid accordingly.

A deputation from the Associated Society of Locomotive Engineers and Firemen, who are also putting forward a claim for a weekly increase of 10s. and 5s., was recently received at the British Board of Trade. At the close of the conference the general secretary of the union, Mr. J. Bromley, stated that the authorities had supplemented their original offer of 5s. and 2s. 6d., but he declined to say by how much. He thought it unlikely, however, that his executive would accept the offer without some further consideration, the authorities not having gone sufficiently far to satisfy them. Sir Albert Stanley made an eloquent appeal to the men to accept the Government's offer.

The Clyde Shipwrights Society recently put forward a claim for a minimum wage of £5 for a normal working week, which was, however, refused by the employers. The shipwrights have now applied to the Committee on Production to have their claim heard. Upon the refusal of the employers to grant their demand, the shipwrights sent in strike notices, but it was anticipated that when the matter was referred to the Committee on Production for arbitration the notices would be withdrawn. A number of the men, notwithstanding, have ceased work. The executive of the trade union concerned has declared this action to be unconstitutional, and has advised the men to return to work.

A deputation of the Amalgamated Society of Engineers and the Engineering and Shipbuilding Trades Federation, which are applying for an increase of 100 per cent on prewar rates for those members who are employed in railway works and shops, were recently also received at the British Board of Trade. Sir Albert Stanley gave it as his opinion that the case of the railway and shop men was analogous, not to the traffic men, but to the men of similar trades throughout the country. Consequently, he considered that their conditions ought to be governed by the conditions prevailing outside. For this reason he believed that the Committee on Production was the appropriate body to decide questions which the unions and the railway executive had failed to settle in conference." Mr. John Hill, president of the Engineering and Shipbuilding Trades Federation, stated that it was understood that the representatives of the craft unions favored this procedure, and that the matter would immediately be again referred to the Committee on Production.

NOTICE.

Masters, Mates and Pilots' Association of the Pacific has opened a branch office at 529½ Beacon St., San Pedro, Cal.; Capt. H. C. Frerichs, Agent.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Pacific Coast Marine.

The Ferris motor-ships "Daca" and "Yakima," built at Puget Sound, have been turned over to the Pacific Steamship Company for operation.

The Puget Sound Bridge and Dredging Company on Nov. 7 launched the 4000-ton wooden ship "Blakeley," the first vessel built by this concern for the U. S. Shipping Board and the thirteenth product of the yard. Miss Gertrude Hardenburgh acted as sponsor.

Materials received in Portland for shipbuilding during October broke all records since the industry began and every yard has all the material on hand it can well care for. Statistics in the office of F. L. Miller, assistant manager of transportation in the North Pacific District for the Emergency Fleet Corporation, show unusual activity.

There will be little shortage in the dried codfish market if the Japanese continue to send their fishing schooners into San Francisco in the future as has been done in the past. On Nov. 7 there arrived from the banks of Nurakaine bay the schooners "Sabo Maru" and "Tobo Maru." Both carried full cargoes of the staple dried or salted fish. This makes a total of five such craft to come to San Francisco in a few weeks.

The Bandon, Oregon, bar, for the first time in several seasons, is adequate for all shipping, and reports given out by the Port Commission declare the least water sounded this fall was seventeen feet. Craft plying there need thirteen to sixteen feet of water to navigate successfully. Of late the Port of Bandon has been prosecuting jetty work on the south side of the channel and will finish the jetty by January.

The scarcity of fish and meat and the consequent high prices charged may be solved in the near future when the housewife of the San Francisco bay cities will have an opportunity to purchase fresh whale steak or serve a luncheon with a tin of the preserved leviathan. A local company has completed the installation of a whaling station at Moss Landing, Monterey Bay, and this will be in full operation in about ten days, when there will be a grand opening and moving pictures showing the first catch landed at the plant.

In order to cut down the fleet of wooden steamships which have given trouble of every kind known, the United States Shipping Board is said to have decided to transform into barges wooden hulls that have been towed to this port for the installation of engines. This move on the part of the Shipping Board is interpreted by shipping men as confirmation of the report that the Government will cancel contracts for the construction of any more craft of wood. Coincident with the announcement that the Shipping Board planned to suspend completion of wooden ships, it was said the vessels now in service would, for the most part, be dispatched to the Atlantic or to Manila as soon as the special board of San Francisco shipping men and ship construction experts reported the steamships to be fit for long voyages.

The S. F. Board of State Harbor Commissioners has secured Government approval to proceed with certain waterfront improvements deemed essential, if the commerce of the port of San Francisco is to continue to progress. Permission was requested to construct extensions to piers 21 and 43; to widen, lengthen and create 20 per cent. more cargo-handling space at pier 41, and to immediately begin the development of the new $170,000 vegetable oil terminal at Islais Creek. The attention of the Council is called to the attitude of the Government respecting the shipment of vegetable oils to San Francisco from the Orient on United States Shipping Board vessels. All of these vessels grant priority for the movement of oils to San Francisco, and unless the Harbor Board is permitted to construct the new facilities for handling the commodity the ships will have to discontinue handling it. The commissioners have made arrangements to start developing the new terminal at once. This will be done by beginning to fill the basin at Islais Creek with rock and dirt supplied to the State free of all costs by the Santa Fe Railway. The railway company is moving a huge quantity of material near Russian Hill and this is loaded into the cars. The State will dump the rock into its own barges and shift to the proposed oil terminal and dump, thus saving the State thousands of dollars.

Owing to the unreasonable amount of cargo damaged via shipment in the new wooden vessels, the Australian Government no longer will permit any wheat to be shipped to the United States by this type of vessel. This was announced by the operators of windjammers and steamers that were built since the beginning of the war. The shippers say that large portions of the cargoes of wheat coming from Australia were damaged on account of the hulls leaking. In addition to this it is announced by a prominent shipper just returned from Washington that the Government has decided to discontinue placing any more engines in vessels of wooden construction on this Coast and that all of the new type vessels will have to be windjammers, or else no more can be built. Although no official announcement has been made by any representative of the Government that the wooden ships built from unseasoned timbers are a failure in many respects, shipping men at San Francisco who have had experience with the "build-quick" craft say that an official of the United States Shipping Board possessing high rank has gone on record against the wooden vessel. A special representative of the Shipping Board visited all of the Pacific Coast Ports a few weeks ago and it was rumored at the time that he was here for the purpose of assembling data which would convince the Government officials that it will be better for the interests of the American merchant marine if the entire energy of the country is devoted to a steel ship program.

Another wreck story was related when the steamer "Santa Cruz" arrived at San Francisco. On October 1 at a location nearly due south and only a few miles from Cape San Lucas, Lower California, a derelict wooden craft was sighted at a distance of about one and a fourth miles. The wooden ribs denoted the craft to be a large wooden vessel, but the "Santa Inez" refrained from going any closer on account of possible danger from submerged wreckage. The same day, but a little later, a huge quantity of wreckage was seen. This extended over some three miles and consisted of coal oil cans and drums of oil, together with a considerable quantity of lumber. One of the drums was taken on the "Santa Inez" and this was found to consist of lubricating oil for Diesel engines. It was marked "M. O. R. U. V." Jerry Daily, manager of the marine department of the Chamber of Commerce, made every effort to learn the identity of the derelict by connecting with the parties who had shipped the drum of oil, but was unsuccessful. It is believed possible that the wreckage came from the ill-fated "Coos Bay" of the United States Shipping Board, which was wrecked in those waters some time ago. None of the wreckage appeared to have been in the water for more than a few weeks at most, for there was no indication of rust on the metal, which is usually the case. As no report has been made of an overdue vessel on the Coast, no alarm is entertained in shipping circles and no fear is expressed that another vessel has been lost. The wreckage could not be that of the steamer "San Gabriel," for that was a steel vessel.

The elimination from the United States Shipping Board fleet of wooden steamships that cannot pass tests made by a committee of San Francisco shipping men and ship construction experts, was indicated recently as the policy of the Division of Operations of the Shipping Board when a recommendation was drawn up by the special committee that the steamship "Marshfield" be condemned. The examination of wooden craft at San Francisco by the committee, which was appointed by John H. Rosseter, director-general of the Division of Operations of the Shipping Board, is in the nature of a second inspection of vessels that were passed as ready for service by Shipping Board inspectors at the shipyards. Captain J. F. Blain, director of construction for the Shipping Board's Emergency Fleet Corporation in the Northwest, where some of the vessels undergoing a second inspection were turned out, does not attach blame to the Government inspectors who did the work in the first place, but said that the steamships were as good as could be built with the material at hand and under the rush tactics in vogue at shipyards. Members of the Rosseter committee said that the action as to the "Marshfield" was only the beginning of their inspection, which probably will take at least five weeks. The "Marshfield" was built at Coos Bay by the Coos Bay Shipbuilding Company. On account of trouble with the steering gear, the steamship was put on the ways at the Alameda plant of the Bethlehem Shipbuilding Corporation for alterations that were expected to put her into shape for cargo carrying. The committee members were reported to have decided that the contemplated lengthening of the vessel and other changes might not make the "Marshfield" of permanent value for long voyages.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

Headquarters of the Sailors' Union of the Pacific, 59 Clay Street, San Francisco.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, NOVEMBER 13, 1918.

THE TRIUMPH OF DEMOCRACY.

With the collapse of Austria, Turkey and Bulgaria there was no longer any doubt about the early ending of the great war.

And so Victory—glorious, unqualified Victory—came to a war-weary but happy and justly rejoicing world.

Prussian autocracy is crushed and has acknowledged it. The cowardly Kaiser and his cohorts, in fear of their own deluded people's wrath, have fled to neutral soil.

An armistice has been signed under the terms of which an effective renewal of hostilities on the part of the enemy is out of the question.

The great and unselfish object for which America entered the war has been practically obtained. The free and self-governing peoples of the world, whether numerically strong or weak, need no longer live in mortal terror of a brutal, conscienceless military monster ever ready to pounce upon them.

The German crimes against humanity on land and at sea have brought their just reward. For the very force which so long sustained the autocratic master of Germany generated the force which has finally overthrown him.

German militarism and all it stood for is dead!

Ruthless submarine warfare—the doctrine of "sink without trace"—has been stamped out!

The millions of human lives lost to gain that end have not been sacrificed in vain. The men of the sea, the naval and merchant seamen of America, Great Britain and our other Allies are proud of their imperishable record during this work. They are proud of their work, their suffering and their dead!

It will be many months—yes, years—before the affairs of a torn and bleeding world have been adjusted to the paths of peace.

Tremendous problems are before us. That by-product of civilization, the struggle between the house of have and the house of want, has not been ended. The war, now so happily concluded, taxed men's souls. But the difficult period of demobilization and reconstruction now upon us will tax the mental faculties of the world's workers as they were never taxed before.

The world has practically purged itself of royal rule.

Political Democracy—government by the people—is firmly established. But we must still strive and struggle to obtain Democracy in industry.

The sovereign people of the United States have just elected a Congress apparently out of sympathy with some of the policies of that great and matchless leader, Woodrow Wilson. No statesman anywhere has ever shown a keener or livelier appreciation of the workers' problems. No President has been willing to go further to establish Democracy in industry than has Woodrow Wilson. Yet our country, as a whole, seems to lack full confidence in a leadership unequaled in advancing genuinely progressive ideals.

Truly, we are on the eve of a momentous and potential period. The fighters in the field and factory have made the world safe for Democracy. Now they must give the best that is in them to make real the ideals of a Brotherhood of Man and the Parliament of the World. The labor movement has often given concrete expression of those ideals. And it must in the future, as in the past, with inexorable logic voice the toilers' just demands, always conscious of the fact that the fate of all peoples is involved in a proper adjustment of those demands. For—

There is a moving of men like the sea in its might,
The grand and resistless uprising of labor;
The banner it carries is justice and right,
It aims not the musket, it draws not the sabre.
But the sound of its tread, o'er the graves of the dead,
Shall startle the world and fill despots with dread;
For 'tis sworn that the land of the Fathers shall be
The home of the brave, and the land of the free.

THE WAR-WORK DRIVE.

A campaign is now being waged all over the United States to raise $170,500,000 for war welfare-work purposes. The funds thus raised will be divided among the following organizations: The Y. M. C. A., Knights of Columbus, Jewish Welfare, Salvation Army, War Camp Community Service, American Library Association and the Young Women's Christian Association.

Doubtless, there will be some misunderstanding about this campaign because the war is over. We should bear in mind, however, that peace has by no means yet returned to devastated Europe. There will be for a long time a necessity for retaining considerable armies in the war-worn countries, and as this country was last to enter and has suffered less than any other, it will be natural for our Allies to expect our armies to be the last to leave.

During all this period the need will be even greater than before for such welfare work as the organizations do which are to benefit by this drive. Heretofore the most appealing work has been the comfort of mud-stained divisions returning from their awful experiences in the front trenches.

Now, though the actual fighting is over, our boys "over there" will still need facilities for writing, movies, games, gatherings, and the hundred and one things that will fill in the leisure hours with wholesome recreation and physical comfort.

So do give liberally to this worthy and commendable cause!

A store closed early is a store run easily.

THOUGHTS ON FREE SPEECH.

The right of free thought and free speech is an inherent human attribute, and the right of a free press, a world medium, through which to express such thought and speech, is a concomitant absolutely essential to human progress. Through this trinity, which permeates and moulds opinion throughout the civilized world, is carried the essence of diversant words, thoughts, aspirations and actions of the inhabitants of all countries. Through it is also carried to every reader of every nation the ever-changing, ever-longing and ever-increasing in advance thought, higher aspirations and more equitable impulses that actuate the human mind in its struggle for a better and brighter world in which to live.

The world advances or lags in direct relation to uttered or written thought, as the result of experiences and their world-wide transmission that others may hear, see and scan, absorb the useful and sublime and discard to oblivion that which is detrimental. Any attempt to curb the mind's discoveries and applications of that which is useful to humanity is indeed an ill omen and the only reward for which must be ignominy and the retarding of human advancement.

Not always have the world's thoughts and actions had the advantages of the opportunities now available for dissemination of knowledge in any comparison with the advantages now afforded for such purposes.

For ages families, tribes and even nations existed and passed away in ignorance of not far remote similar human groups about them.

For centuries succeeding generations made but little progress and depended largely upon the unwritten laws and useful knowledge that had been handed down from generation to generation by word from mouth to ear. In this manner much of the useful in art, science and literature was brought down to the ages when characters were invented in the printer's art to arrange them in suitable form for records and transmission to the world.

Thinking men readily concede that a self-governing nation will not long endure if free speech and a free press are arbitrarily suppressed.

A policy of suppression may be necessary in times of war. But with the return of peace the unholy campaign against any class of publications in this country, with a view of harassing them to the point of disruption, must cease—or our government will reap the inevitable harvest of suppression. There will be secret and poisonous propaganda against the government and against our most cherished institutions. In the long run this method of urging reforms is far more dangerous than any fiery curbstone oratory or any radical literature.

In pouncing upon various radical publications the Postmaster-General and his zealous press censors have doubtless been actuated by the highest motives. But there is another side to that story and we had better beware lest "thought control" and "thought censorship" become an established practice in America.

The man who boasts of being the "father of the union" should be guarded against allowing his parental solicitude to become like that of the mother who remains always afraid lest her boy will go too near the water. Unions, like children, grow to years of discretion, when they must for their own good be allowed to exercise it.

ANOTHER RECORD BREAKER.

With the end of the war we have also reached the pinnacle of success in building ships.

All shipbuilding records for any country were broken by the total deliveries of completed new ships to the Shipping Board during October. In spite of the epidemic of influenza that incapacitated about one-third of the shipworkers, the record-breaking total for September was surpassed by nearly 50,000 deadweight tons. There were added to the American merchant marine in October 79 completed new ships of 415,908 deadweight tons.

The deliveries comprised 47 steel ships of 301,208 deadweight tons, 30 wood ships of 107,200 deadweight tons and 2 composite ships of 7500 deadweight tons. From American shipyards came the unprecedented total of 398,108 deadweight tons. Japanese shipyards delivered 2 steel ships of 17,808 deadweight tons. The American total exceeds by 68,980 deadweight tons the output of ocean-going vessels in this country in 1914 and 1915. It betters the pre-war high mark in American shipbuilding, the total for 1916, by 112,553 deadweight tons. It also surpasses the British record for any month by 102,397 deadweight tons.

Once more the Pacific Coast led all sections of the country in shipbuilding. The deliveries from California, Washington and Oregon totaled 30 vessels of 190,400 deadweight tons. Along the Atlantic Coast there were completed and delivered 17 vessels of 102,000 deadweight tons. The Great Lakes shipyards delivered 21 vessels of 73,000 deadweight tons. From the Gulf States came 9 vessels of 33,200 deadweight tons.

The October deliveries bring the total of completed new ships in 1918 up to 2,386,835 deadweight tons. Since the date of the first delivery, August 30, 1917, there have been completed and delivered 487 ocean-going vessels totaling 2,793,510 deadweight tons.

It is a little early to predict how peace will affect American shipbuilding. This much seems certain, however: Neck-breaking speed contests and unlimited overtime work should be abolished without further delay.

A scheme has been launched in Great Britain for the intensive training of youths between sixteen and seventeen for employment as sailors and firemen in the Mercantile Marine. A committee composed of representatives of the Board of Trade, Ministry of Shipping, Shipping Federation, and National Sailors' and Firemen's Union has been appointed to initiate and supervise the scheme, and a selection officer has been appointed, having his office at the Board of Trade in London. Already, it has been decided that "the selection of suitable candidates for admission to the sea school can only be carried out satisfactorily by means of a personal interview." Arrangements have therefore been made for candidates, who do not reside in or near London, to be interviewed at other ports.

When we reflect that one of the chief purposes of the trade union is to restrain the aggressiveness of the Government the idea of the compulsory arbitrationist that the Government should be vested with authority to supersede the other chief purposes of trade unionism is a striking instance of inconsistency.

SEAMEN'S STATUS ON TRANSPORTS

Merchant Seamen on U. S. Army Transports Are Subject to Military Law and Trial by Court Martial.

The legal status of merchant seamen employed on United States Army transports is defined in the following self-explanatory communicaton just received by President Furuseth of the International Seamen's Union of America:

WAR DEPARTMENT,
Office of the Chief of Staff
Purchase, Storage and Traffic Division.
Washington, October 26, 1918.

Mr. Andrew Furuseth, President International Seamen's Union of America, National Hotel, Washington, D. C.

Dear Sir:—Your letters of September 7th, 14th and 20th, and October 11th and 12th, calling attention to the trial and fining of Lauritz Salo, Jose Jegares, Martin Hammer, Ullen Vittorio, Nicholas Los, and Benito Sanches, and to the failure of William Anderson, E. Nicola, and others mentioned in a cablegram signed Phillip Harty to receive a part of their salary and overtime due them, have been received.

All of the above cases have been carefully investigated, and with regard to those where members of crews of Army transports have been fined, it is believed that misunderstanding exists with regard to their status, which, when understood, I am confident will clear up the whole situation.

The second Article of War (Paragraph 4, Manual of Courts Martial, 1917) provides as follows:

"The following persons are subject to the Articles of War: (a) All officers and soldiers belonging to the Regular Army of the United States; all volunteers, from the dates of their muster or acceptance into the military service of the United States and all other persons lawfully called, drafted, or ordered into, or to duty, or for training in the said service, from the dates they are required by the terms of the call, draft, or order to obey the same. (b) Cadets. (c) Officers and soldiers of the Marine Corps when detached for service with the armies of the United States by order of the President. (d) Officers and enlisted men of the Medical Department of the Navy, serving with a body of marines detached for service with the Army in accordance with the provisions of section sixteen hundred twenty-one of the Revised Statutes, shall, while so serving, be subject to the rules and articles of war prescribed for the government of the Army in the same manner as the officers and men of the Marine Corps while so serving (Act of August 29, 1916, 39 Stat., 573). (e) All retainers to the camp and all persons accompanying or serving with the armies of the United States without the territorial jurisdiction of the United States, and in time of war all such retainers and persons accompanying or serving with the armies of the United States in the field, both within and without the territorial jurisdiction of the United States though not otherwise subject to the Articles of War. (f) All persons under sentence adjudged by courts martial. (g) Army field clerks. (h) Field clerks, Quartermaster Corps."

Attention is particularly directed to paragraph "E," especially the clause "in time of war all such retainers and persons accompanying or serving with the armies of the United States in the field, both within and without the territorial jurisdiction of the United States though not otherwise subject to the Articles of War."

The question whether or not the members of the crew of the Army transports are "persons accompanying or serving with the armies, etc.," arose in the case of Harry C. Falls, who signed shipping articles for service on the "Edward Luckenbach" as chief cook, at New York City. Just prior to the sailing of the boat, Falls attempted to leave with his baggage and was arrested and charges preferred against him under the fifty-eighth Article of War. Falls applied to the United States District Court, District of New Jersey for a writ of habeas corpus, the court in its opinion said:

"The U. S. A. C. T. 'Edward Luckenbach,' was engaged in transporting supplies for the Army under the Quartermaster's Department of the United States Army. Carrying supplies to equip and sustain the Army is a very important military operation in time of war. The petitioner by a reasonable and natural interpretation of the second Article of War is a person 'serving with the armies of the United States in the field,' and as such is in the same position with reference to trial by court martial as any person belonging to one of the other classes enumerated in said article. Any other interpretation of the statute under all the facts would be unreasonable, illogical and disastrous 'in time of war.' It is unthinkable that Congress did not mean to include persons in the United States Army Transport Service, engaged in transporting our armies and sustaining them with equipment and supplies, in the class, in time of

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Nov. 7, 1918.
Regular weekly meetings postponed in compliance with the orders issued by the S. F. Board of Health prohibiting meetings and gatherings of any kind on account of the influenza epidemic. Shipping is fair; plenty of members ashore. Full Shipwreck Benefit was ordered paid to one member wrecked on the S. S. "Mandalay."
EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

DIED.

August E. Asklund, No. 1226, a native of Sweden, age 43. Died at San Francisco, Cal., Nov. 4, 1918.

Edward Duffey, No. 1062, a native of Ireland, age 38. Died at San Francisco, Cal., Nov. 7, 1918.

Victor Karlsen, No. 960, a native of Sweden, age 28. Died at San Francisco, Cal., Nov. 1, 1918.

Michail Matsuk, No. 2819, a native of Greece, age 33. Died at San Francisco, Cal., Oct. 27, 1918.

Olai S. Olsen, No. 1223, a native of Norway, age 32. Died at San Francisco, Cal., Nov. 8, 1918.

Edward C. Poere, No. 1795, a native of Ireland, age 27. Died in the wreck of S. S. "Galiane," Oct. 30, 1918.

James H. Rasmussen, No. 1289, a native of Denmark, age 30. Died at Oakland, Cal., Nov. 7, 1918.

The steamer "San Pedro" has been sold by the Gulf Majl Steamship Company to the Compania Navier of Manila. This company recently purchased the steamer "Bonita Juarez." Both vessels are destined for service in the inter-island copra trade, and the "San Pedro" will leave here in a few weeks with a general cargo for the Philippines. The latter vessel has been ordered shifted to the Barnes & Tibbetts plant at Alameda, where it will be completely renovated and overhauled. There will be a new deckhouse and other important changes. When the work has been completed the vessel will be placed on the berth to load the Manila cargo.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

A Europe of working class republics, forecast in this correspondence a month ago as the meaning of President Wilson's warning to the heedless statesmen of Europe in his New York speech, is rising from the ashes of the world war.

Arno Dosch, who used to be a reporter on the San Francisco Bulletin, and has a good deal of hard sense, cables to the New York World from Copenhagen to-day that "red" republics, similar to the one in Russia, have been established in Vienna and Budapest; that a Liberal republic has also been declared in Budapest; that the revolutionary government of the Czecho-Slavs is moderate Socialist, and the revolutionary government of the Southern Slavs is radical. He thinks that the German people are ready for their own revolution, and that the Kaiser and his friends are about to take flight.

The fact of working class revolution in Austro-Hungary is beyond dispute, just as it is beyond dispute in Russia. Again, we have the news that the peasant-soldier-workmen councils have overthrown the new king in Bulgaria, and have established another "red" republic there. Two of the Central Powers have passed through the gates of revolution, and the armed workers of those countries are appealing to their brothers in Germany to rise at the call of Karl Liebknecht and establish a great workingmen's republic in Germany.

Nothing so fundamentally important to the emancipation of labor has occurred since the French Revolution. For just as autocratic Germany and Russia and Austro-Hungary kept all the world bent beneath its load of armament, and almost afraid to move forward in democracy, so now the workingmen's republics are to free the whole world from the cost of armaments. They are to make President Wilson's task easy, when he undertakes to bring the great peace congress to agree upon an immediate League of Nations.

Let there be no misunderstanding of the effect of this seizure of governmental power by the working classes in Europe. It will, one way or another, sweep Italy and France and England. It will topple the thrones, soon or late, in Sweden, Denmark, Norway, Holland and Spain. It may have upset Rumania before these lines are in type. It will finally capture Belgium. That is simply because the masses of the warring countries have felt the meaning of armed power, during the war, and they will insist upon exercising at least political power when the war is done. As President Wilson said at New York, the statesmen who will not understand the peoples' will are going to be "broken."

As surely as Austria and Bohemia and Bulgaria are in revolution now, with their working class in control, just so surely must the United States look forward to the increase of social unrest in this country among the millions whose families "in the old country" have helped to tear down the thrones and the aristocrats and the old industrial serfdom. Men will no longer rush to the United States to find jobs. Immigration here will not represent brawn and brain; the United States will have to bid high for even the type of workers whom it has been shutting out by its immigration laws. Labor is going to be at a premium here—after our troops and our sailors come home—as compared with the years before the war. Men who used to do the hardest common labor will now want to handle machinery, since they have become skilled mechanics of some sort while in the service. They will be organized, down to the last man. They will hold national conventions, in which new men and new plans will come to the front. We shall have a new labor movement, growing out of the old.

No man living in this country will be able to guide this movement, it will be so complex, so headstrong, in the next few years. In spite of every attempt to suppress it, the spirit of social unrest grows and spreads and breaks out in unexpected places, and the politicians begin to wonder how many years they will be able to keep a working class majority out of the Congress of the United States.

It is because the world is being captured by the workers, thanks to the suicide of European autocracies by war, that the employers in this country are all at once changing their opinion of the National War Labor Board and the Department of Labor. Last month those institutions were "bolshevik" in the eyes of organized capital; to-day they are wonderful institutions, safeguarding public order. Last month the employers, within and outside the War Labor Board, were anxious for that tribunal to die; to-day they are determined that it shall remain, after the war, to protect them and theirs against strikes.

There are a few employing corporations, such, for example, as the Brooklyn Rapid Transit Co., which have not changed their minds quickly enough. It was only last Monday that the War Labor Board served on that company its award which ordered the company to reinstate all the union men whom it had discharged. The company refused to obey the Board. The men went out on strike yesterday morning. Last night a scab motorman ran a train off the track at a curve in a tunnel on the line, and a hundred persons were killed and more than that number were injured. The president of the company said that he was "too sad" to discuss the reason for this sacrifice of life.

More employers have appealed to the Board during the past week than during the preceding three months. Strikes are threatened in many parts of the country, as the end of the war is evident. Labor is steadily gaining ground through organization in the shops, and through application of the principles laid down by the Board. The employers are afraid that any weakening of the authority of the Board would now be the signal for an epidemic of strikes which might cause general paralysis of business.

That is one reason why the Labor Department is going to be one of the best-supported departments of the Government, after the war, and the War Labor Board and the War Labor Policies Board will be retained, with the word "War" in their titles changed, perhaps, to "Reconstruction."

In the reconstruction program, also, we shall probably find the Food Administration, the Fuel Administration, the Housing Commission, and the Industries Board. Each one of those will have to play a part in re-establishing in civil life the millions of men who have put on the khaki or the navy blue.

It may be of interest to say that one of the plans now proposed, for returning these men to civilian jobs, is that the draft system be simply reversed. That is, that men be "selected" from the armed forces, with their own consent, to fit into each of the hundreds of new enterprises that will be launched by the Government in its plan of general industrial, agricultural, transportation and commercial reconstruction. This idea has not been developed into a definite program as yet, but something of the kind is likely to be recommended to Congress when the time for demobilization comes.

Meanwhile, the War Labor Board has added another safeguard to the eight-hour day. It will be remembered that Chief Justice Clark of the Supreme Court of North Carolina, acting as umpire in the case of the International Molders' Union against the Wheeling Mold & Foundry Co., at Wheeling, W. Va., decided that the eight-hour day must be real, and not merely basic, except when a committee of the workers and management should agree that a certain emergency existed which made overtime necessary for a limited number of hours.

Now Henry Ford hands down as umpire for the War Labor Board an award against the same company, on the eight-hour issue, for the International Association of Machinists, and Chairman Walsh points out that the actual eight-hour day is now firmly established in practice.

The question submitted to Henry Ford as umpire was: "Should the National War Labor Board render a decision granting the demand of the Machinists of the Wheeling Mold & Foundry Co. for a basic eight-hour day with time and a half for overtime, and double time for Sundays and legal holidays?"

This was not so advanced an issue as the one settled by Justice Clark, because the Molders claimed, and Clark ruled, that their work was so severe that overtime should not be permitted except in grave emergencies.

Ford answered the question: "Yes, I have reviewed the arguments and have given the question due thought and consideration and have come to the conclusion stated, but do not deem it necessary to give my reasons unless your Honorable Board shall express a desire for the same.

"But I cannot refrain from expressing my deep conviction that the straight eight-hour day is much better practice than the so-called 'eight-hour basic day,' where the latter is continually and almost uniformly being practically exceeded in the number of working hours.

"My experience, and also my reason, teaches me that very few emergencies ever exist in the manufacturing business, justifying the practice of exceeding eight working hours per day. The strain of eight hours is enough, and the hours should never be increased except under the most extraordinary circumstances. I cannot dwell too much on this. For the good of the men—for the good of the employer—and for the general results, I would ad-

monish those interested to adhere to the straight eight-hour day."

The Machinists in this plant, who did not venture to demand the actual eight-hour day, are told by Henry Ford that they had better insist upon it. He knows, and he thinks they ought to see, that in the long run the chief advance the labor movement makes is not in the number of dollars it handles, but in the number of hours of free time it can secure.

Chairman Frank P. Walsh made this comment on Ford's award: "Mr. Ford found for the straight eight-hour day. More and more we are coming to this. The actual eight-hour day and not the basic eight-hour day is essential. The decision by Mr. Ford will give impetus to this tendency.

"Every arbitrator who has been called by the War Labor Board has found for the eight-hour day. These arbitrators were drawn by lot from a panel selected by the President. The first was Otto M. Eidlitz, the builder. Mr. Ford speaks as one of the largest employers. Justice Clark, who reached the same decision, considered the matter from the standpoint of war production, business welfare, welfare of the workers and the general prosperity. In addition the Board has put the basic eight-hour day into effect in many industries. It is my hope that this question is being finally settled and that the eight-hour practice may become uniform."

INTERIOR OF A "TANK."

The ordinary tank is designed for eight men. In front are two stiff seats, one for the officer and one for the driver. The narrow slits serve as portholes through which to look ahead. In front of the officer is a map board and gun mounting. Behind the engine, one on each side, are the secondary gears. Down the middle of the tank is the powerful petrol engine, part of it covered with a hood, and along either side a narrow passage, through which a man can slide from officer's and driver's seat back and forth to the mechanism at the rear. There are four gun turrets, two on each side. There is also a place for a gun in the rear, but this is seldom used. Along the steel walls are numberless ingenious little cupboards for stores, and ammunition cases are stacked high. Every bit of space is utilized. Electric bulbs light the interior. Beside the driver are the engine levers. Behind the engine are the secondary gears, by which the machine is turned in any direction. All action inside is directed by signals, for when the tank moves the noise is such as to drown a man's voice.

Lloyd-George, after praising American ingenuity, especially as regards the daylight-saving laws, added: "But when it comes to change of time, London is really not so far behind America. Nowadays, one doesn't speak in weeks and months. Only the other day I encountered a friend I had not seen for a long time. 'Been in London long?' I asked. 'No, not very. Just about four raids,' was the reply."

Much of that which passes as "progressive" and "advanced" in the thought of today is merely outgrown notion expressed in a strange vocabulary.

OBSTACLES.

(By Henry A. McAnarney.)

From the moment President Wilson read his historic message to the Congress of the United States declaring that a state of war existed with the Imperial Government of Germany, and from the moment the Congress almost unanimously indorsed that declaration, this country has been confronted by serious obstacles. Making ready for war, this peaceful nation threw open its storehouse doors to take inventory of its goods.

Ere the message of the President had been heralded in the land, the mill, the mine, the factory, and the forest were threatened by plots and sabotage.

Prussian philosophy had taught that the United States was not a nation; that it had no national spirit; no tradition; no ties to bind its people—merely a vast area of land swarming with human beings intent upon their own affairs. The Prussian had viewed the prospect with a single eye. He saw the States; the United States was invisible to him.

The Prussian was deceived. His masters had tricked him with their science. By their ridicule, their derision and contempt they have transformed a peaceful people into an aggressive army; they have forced a friendly nation to become a determined foe.

These human units intent upon their own affairs were welded into a solid nation breathing a national spirit, emerging from its lethargy strong, confident, and fearless.

The web of barriers the Prussian had woven were torn apart by a giant hand, and the stealthy spiders which spun them were crushed beneath a monster foot. In a single stroke the Prussian obstacle at home was crushed.

Then the bugle call resounded summoning these men of peace, undisciplined, untrained, to the school of war. They swarmed forth, abandoning their homes, their professions and all their ordinary pursuits and thronged the cantonments, cheers on their lips and patriotic fervor surging in their hearts.

The nation had triumphed over another obstacle. It had molded a straggling mob into an army, equipped and ready for the battle.

Next the sea—the sea that had to be traversed 3000 miles to make the Army effective.

The Prussian foresight had prepared for that. He had said no man dare defy his submarine serpents nor nation challenge his command of the sea. But he was defied, challenged, and annihilated. The sea itself left no trace of the barricades he had raised. These straggling human units from America, intent upon their own affairs, were fighting on the battle field of France.

The great Prussian obstacles had been shattered.

And now—comes labor.

The Army guards the battle front; the Navy guards the sea; each protects the nation's homes; each serves as sentry over liberty everywhere, and each has placed its trust, its power, its very life in the labor that is left at home.

The Prussian lie, the sabotage, the torch, the terrors of the sea, were conquered by the force of arms. And labor at home has made its full contribution in that greatest of all conquests!

The agitation against child labor is simply a movement to reestablish the natural order in family affairs.

INSECT LANGUAGE.

Naturalists say that insects, like birds and animals, have their own peculiar calls, but since the sounds the insects produce come from the rubbing together of their limbs or wing covers and the vibration of the wings, the insects' calls can not always be spoken of as voices. Landoise, the famous naturalist, has found that to produce the sound of "F" the fly vibrates its wings 352 times a second, and the bee to create "A" vibrates 440 times a second. A tired bee hums on "E" sharp and the naturalist says flies and bees undoubtedly mean something when they hum louder and louder, and the change, although perhaps involuntary, is at the command of the will and similar to the voice.

Locusts, grasshoppers and crickets produce familiar music with their wings that answer as calls and is a language to a certain extent.

After receiving a pocket service book, a pocket Bible, a pocket album, a pocket French dictionary, and a pocket edition of the poets, Private Peters hurriedly wrote: "Please send no more pocket editions until I get some pocket additions.'"

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

year the sum of $1,000,000 without interest toward financing approved additional extensions; funds required for these purposes beyond such amount to be furnished by the Postmaster-General. If new securities are required to be issued by the telegraph company the Government pays the interest, dividends or other cost of such securities issued in exchange, discharge or renewal of existing obligations."

War Profits Mount High.

In a recent speech on war taxation, just published in the Congressional Record, Congressman Kitchin of North Carolina presented these figures on war profits of American manufacturers:

"In the pre-war years 1911, 1912, and 1913, the average net income of the corporations of this country were $4,122,000,000. In 1915 it was $5,310,000,000, an increase of over $1,000,000,000. After paying their taxes they had over $1,000,000,000 clear net profit more than the pre-war year average. In 1916 they had $8,765,000,000 of net income, over $4,500,000,000 more than in the pre-war years. After paying all their income taxes and all other taxes they had clear net over 100 per cent. more than they had during the pre-war period.

"In 1917, according to treasury estimates upon their returns so far tabulated, the net income will reach $10,500,000,000, about $6,500,000,000 more than in the pre-war period. After paying all the taxes of that year they then have over 100 per cent. more than the pre-war profits.

"After paying the taxes levied by this bill, the income tax on corporations and excess profits or war profits tax on corporations, there will be left to the corporations over $1,700,000,000 more income and profits than their pre-war average net income for 1911, 1912, and 1913. Can not they stand it? Who, in the face of these facts, will stand here or elsewhere sponsor for the plea that corporate business can not stand the tax?"

"War Changes Opinion."

"We are not as fearful of quite a few things as we used to be," says the Railroad Trainman, official magazine of the Brotherhood of Railroad Trainmen, in discussing Government control of railroads.

"The railroad labor organizations never have been committed to a policy of Government control of anything; they are not so committed now, but there is a chance that they will not be so conservative in the future."

The Railroad Trainman says that so far as wages and service conditions go the results are better than they would have been under private management.

"Other questions of equally great concern are yet to be solved," continues this paper.

"We are working and fighting for government by the people, and not by a few office-holders, and it is not our idea of democracy to deny the right to hold office on the ground that a man out of office enjoys a greater degree of self-government than he will if he becomes an active legislative or official part of that government. We accept no such doctrine now or at any other time. We don't propose to give up our political rights any more than we do to surrender our industrial rights. We don't propose to let anybody lead us up an alley simply because he believes it is a good place for us to be. We belong on Political Main street and we propose to stay there.

"This is one situation, possible under government ownership, that clearly is not an advantage."

A Good "No-Strike" Test.

The Seattle Union Record suggests that newspapers should be accurate when they say the A. F. of L. is against strikes because it has declared: "Do nothing that you cannot justify to the man on the firing line in France."

"This pledge means," says the Union Record, "that there will be no strike that cannot be justified to the soldiers in France. It is possible that there might be a strike that could be more than justified to the men in the front-line trenches.

"American trade unionists have their hearts and souls in this war. They want to do their very best and their very most. And they want conditions that will permit them to give their best and the most of it.

"If there were no employers who wanted to profiteer; if there were only employers who would do nothing that could not be justified to the men on the firing line, there probably would not be one lost moment in the machinery of production.

"Let everyone adopt that motto. Everything must square with the conscience of the firing line."

Can't Build Memorial.

The War Industries Board has vetoed a plan to build a temporary memorial in Chicago in honor of deceased soldiers. The Board says:

"If we could put the question squarely up to those heroes who have passed beyond do we not know that their answer would be to use every available dollar to speed up war production, which we must have for an irresistible continuous drive, rather than turn aside now to do them honor even for a moment when the war has not yet been won?

"And if we were to put this question squarely up to our men now fighting in France, would they not say, 'Give us first abundance of munitions and supplies that we may sweep the enemy beyond the Rhine and early lay the foundation for a lasting peace, the most imposing monument that can now or ever be erected'?"

"Lobsided Liberty."

The Toronto Globe has joined with trade unionists in their fight against the Government's attempt to outlaw strikers. The newspaper refers to this policy as "lobsided liberty."

"What about the position of the Canadian shell manufacturer?" asks the Globe. "There is no coercion for him. No one asserts that the making of shells for the army of the United States is a thing 'essential to the efficient performance of Canada's duty in the prosecution of the war.' If he had refused to take a share of the three or four hundred million dollars of shell orders offered to Canadian manufacturers and had decided to adapt his factory to more profitable business no one would have thought of compelling him to continue making shells. He has freedom of decision. That sort of lobsided liberty is not likely to appeal to the people of Canada who stand for a real square deal."

SEAMEN'S STATUS ON TRANSPORTS

(Continued from Page 7.)

war, of those 'persons accompanying or serving with the armies of the United States in the field.' It follows from the conclusions reached that the military authorities had jurisdiction to try the petitioner by court martial and the writ of habeas corpus must be dismissed." It follows therefore, that any one accepting employment in such service regardless of the terms of their contract of employment or whether they are employed under a written contract or not, automatically become subject to military law, it remains only for the military authorities to carry out the provision of the law.

Section 4596, Revised Statutes, can have no application to employees on the Army transports in time of war, but is superseded by the provisions above referred to, which, of course, are enactments of Congress.

Only the matter then, of the excessiveness of the punishment remains. These cases are apparently all of absence without leave, which is covered by the sixty-first Article of War which follows:

"Any person subject to military law who fails to repair at the fixed time to the properly appointed place of duty or goes from the same without proper leave, or absents himself from his command, guard, quarters, station, or camp without proper leave, shall be punished as a court martial may direct."

It will be noted that the punishment is discretionary with the court. However the court should go no farther than to impose such punishment as will, in its judgment, prevent a repetition of the offense by the offender and serve as a deterrent to others, and the trial court having both sides of the case before it besides being acquainted with local conditions, is very properly empowered to provide the means to this end.

It is evident that the trial court took into consideration the fact that these men were probably unfamiliar, in a measure at least, with the gravity of their offense, for had they been members of the military establishment I have no doubt they would have been dealt with very much more severely.

It must be remembered that it is the duty of every citizen, at this time, to exert every effort toward the successful conclusion of the war, and there is no class of men on whom this duty bears with greater weight than those in the Transport Service, all of which of course you fully appreciate; therefore, any dereliction of duty or conduct prejudicial to the highest degree of service should be met with measures sufficiently severe to prevent their recurrence.

The action taken in these cases was by duly constituted courts and the punishment inflicted within their jurisdiction, it, therefore, was not arbitrary action without inquiry.

I have gone to some length in order that you be fully apprised of the status of these men and I am confident you will agree that in view of the vital nature of the service required of them, repressive measures, which, under ordinary circumstances, would be disproportionate, are justified.

I appreciate your kindness in bringing this matter to my attention and shall be glad to take up, for review by high authority, any case where it seems sound discretion has not been exercised by the trial court, and shall be glad if you will bring any such cases to my attention.

With reference to the cases where the several men mentioned above failed to receive their pay and overtime, it is believed that this, in a large measure, is due to the somewhat complex system ordinarily used in transferring boats from private owners, through the Shipping Board and ultimately to Army service. That men should be inconvenienced in getting their pay is regrettable and it is hoped will be eliminated entirely eventually, but for the present it is suggested that these men be instructed to submit their claim setting forth fully the facts in order that settlement may be expedited.

(Signed) FRANK T. HINES,
Brig. General, G. S.,
Chief of Embarkation.

It is a grievous error to say, as do the friends of compulsory arbitration, that because that system is applied only to organized workers, it is an adjunct and support of trade unionism. As well might it be said that because the law hangs only the murderer, it is an adjunct and support of murder! The fact is that compulsory arbitration is applied only to trade unions because only they can make a strike successful as a means of suspending industry. The individual employer is his own "arbitrator" in the case of the unorganized workers.

GERMAN LIBERTY?

America and Americans have vital interests at stake in the proper adjustment of the questions involved in this war. Our people have always enjoyed free speech, free public assemblage, freedom to travel from place to place, freedom to exercise any human right in an orderly way.

We of America probably do not appreciate this freedom, because few of us have lived under the rule of a nation which not only restricts at all times the exercise of that freedom but absolutely prohibits it.

Germany is such a nation. American travelers in Germany even before the war marveled at the abject servility to their rulers of the German people; were amazed by the arrogance of the military caste.

George W. Perkins, President of the International Cigarmakers' Union, in reference to a tour of investigation in Germany, as a representative of the American Federation of Labor a year before the war, made this observation in a recent article in the Elevator Constructor:

"My personal experience while studying the labor movement in Germany was such as to make me more than ever absolutely and unqualifiedly back of our Government in this war. I found absolutely no democracy in the German labor movement. No meeting of workingmen could be held in Germany without Government police supervision. No one could speak in a foreign tongue at any labor meeting without first submitting his speech to the autocratic Government, having it censored, and being given a permit to make the address."

How long would the working people of this country tolerate such a system? How long could the average American live under a German permit system, in which his every movement would be officially recorded?

This system of absolute control of the destinies of the people is the fundamental basis of the German government. The unquestioned exercise of that power has created the German ambition to dominate the world.

America is now engaged in rendering that power impotent; in smashing it, if need be. The future safety of the liberties of the people of this country make that imperative.

Since liberty is the dearest possession of mankind, it can not be achieved without sacrifice; it can not be maintained without a struggle against the autocratic powers that thrive on privilege without wresting that power from a ruling class and vesting it in all the people.

The subjugation of liberty affects all free people. Therefore, the sacrifice and the struggle necessary to retain it must be shared by all.

A great responsibility rests upon labor, for labor first must build the ships and make the guns and the ammunition before the fighting forces can be transported, before their courage and their prowess in battle can be made effective.

The most potent labor agency which prevents the fulfillment of that responsibility is the impeding of continuous production by absenteeism, labor turnover and slacking at work, or loafing on the job. These evils may be caused by improper working conditions or by the carelessness of the individual workers, but whatever the cause every effort should be made at this critical period in the world's affairs by both employers and workmen engaged in this imperative work to eliminate these evils. The finished product being the combination of many operations, harmony of all the contributing factors is absolutely necessary to prevent both congestion and idleness in a particular stage of manufacture. The completion of a shell, for instance, requires ten operations. If the eighth and ninth are delayed, congestion is bound to occur, in all the prior operations, while the tenth is idle—a bad state of affairs when the soldier in the trench needs that shell.

The soldier can not delay the war to await the arrival of that shell. His life may depend upon its accessibility, and if it isn't within his reach, despite his personal courage, he, not the undutiful workmen, must pay the penalty for the slacking or absenteeism of Nos. 8 and 9 and the consequent idleness of No. 10 in the making of that shell.

The disaffection of labor, therefore, not only imposes upon the soldier needless risk of his life, but in this war it exerts a vital influence upon the liberties of the world.

WORKERS' UNIVERSITIES.

Working class universities are planned as a part of a great educational program for British, and particularly Scotch, workers, according to information which has reached the United States Department of Labor.

In 1916 a conference of trade-union delegates representing 262 organizations unanimously decided in favor of the establishment of a Scottish labor college and appointed a provisional committee to make preliminary arrangements, draft a constitution, and prepare a curriculum to be submitted to a labor conference. At a conference in March of this year the constitution and curriculum were adopted, and a committee was given authority to approach union organizations for financial support.

Meanwhile the sponsors of the college, which aims to teach subjects from the point of view of the working class in particular, have been busy organizing workingmen's classes. Last winter 19 classes were formed, with an enrollment of 1,500 students, and 20 other classes were organized in co-operation with the Plebs League, numbering about 1,000 students. The largest class had a membership of 540. In addition to these there were study circles at meal times in many workshops. Some of the classes were for particular trades, but most of them were open to all union workers.

The curriculum of the proposed college will include economics, general and industrial history, trade-union history and problems, history of the co-operation movement, political science, algebra, statistics, trade-union law, English literature, composition, and public speaking. The aim is to train young men and women for trade-union or political service.

Lincoln loved jokes on himself, and one day a Congressman called at the White House and found the President had a cold, and he expressed his sympathy. "Well," said Lincoln, as he looked down at his feet, which were, of course, uncommonly large, "I expect colds. There's so much of me on the ground, you know."

Labor News

State insurance in Wisconsin has again demonstrated its success, despite efforts to discredit the State insurance fund, which has a balance of $141,025.87 with all losses paid. One year ago there was $110,868.44 in the fund. Friends of the State fund show that the amount set aside by the State for premiums is less than insurance companies set aside.

An arbitrator has settled a dispute between the Gorton-Pew Fisheries Company of Gloucester, Mass., and its fish cutters. The work week will be fifty-four hours during the five winter months and fifty hours during the remaining seven months, with time and one-half for the extra four hours and for Sundays and holidays. The men asked for a straight fifty-hour week.

Hawaii has a labor problem no less than the United States as a whole, for so many of the young men of the islands have enlisted in the Army and Navy that the supply of workmen is at the lowest ebb in many years. Efforts have been made there of late to interest native Hawaiian workers in field labor, for which in the past they have not shown any great liking.

Compensation of 48 cents a week has been awarded Ralph Carbone of Altoona by a Pennsylvania State compensation referee. Carbone was injured last year, receiving compensation until June 1, 1918. Before the accident his weekly wage was $20.46. Since June he has been employed on a railroad at $19.50 a week. His loss in earning power is 96 cents a week and the compensation referee rules that according to law one-half of this must be paid by the insurance carriers.

At a recent Denver meeting of representatives of public service organizations, including the United States Employment Service, a resolution was passed indorsing any movement "to close the private employment agencies in the State of Colorado." It was shown that these establishments not only interfere with the State and Government's employment services, but they are unnecessary, as they are less interested in securing workers for war production than they are in making money.

While Omaha (Neb.) boys are "over there" fighting for democracy, local authorities are attempting to destroy the Fire Fighters' Union. The usual tactics of small-minded men, ignorant of social changes, are being used. Local "patriots" ignore this situation while they thunder against autocracy. The Central Labor Union is assisting the fire fighters to secure justice, and officers of the International Association of Fire Fighters, located at Washington, have assured the men that the association is behind them.

Motormen and conductors employed by the York (Pa.) Railways Company packed a whole lot of action in one twenty-four hours. They were unorganized when they asked the company to raise wages. The company balked, the men started to form a union and so did the company. The men rejected the company's "union" and with almost a 100 per cent. organization behind them, these workers, now union men, secured recognition of their organization, wage increases and shorter hours.

INFORMATION WANTED.

An appeal has been taken by the owners of the Bark "Portugal" from the decision of the Federal District Court in the matter of salvage award of $30,000 recently made and referred to in these columns. The determination of this appeal may be a matter of six months. Seamen who wish to get their money as soon as possible should communicate with Silas B. Axtell, Attorney, One Broadway, New York, in order that I may send them a power of attorney form to be signed, which will be required by the court before the money can be paid out. The crew, of course, are sure to get some money and they will probably get their portion of the amount awarded by the lower court. It seems quite possible that the decision of the lower court will be affirmed. 7-24-18

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City. 7-24-18

You Want the Truth
This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.
LA FOLLETTE'S MAGAZINE
will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.
Send in your order today.
$1.00 Per Year—Agents Wanted

INFORMATION WANTED.

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City. 6-5-18

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

William O'Keefe, who has not been heard from in many years, is inquired for. His niece, Catherine Lynch, aged 12, is very anxious to locate him. Anyone knowing his whereabouts, please notify Catherine Lynch, 42 Monroe Street, New York City.

Home News

California elected Governor Stephens, appointed to that office by former Governor Johnson upon his election as a United States Senator.

In last Tuesday's election President Wilson lost control of Congress, both the Senate and the House changing from a Democratic to a Republican majority.

The New York Board of Education has recommended to the Board of Estimate that $50,000 be appropriated for the establishment of a lunch system for school children.

Daylight saving by turning the clock ahead one hour for seven months is estimated to have saved the country 1,250,000 tons of coal and $2,000,000 in gas bills. It contributed also to a large extent toward the success of the war gardens.

The Federal Government has begun a nation-wide campaign for the total eradication of tuberculosis from cattle and hogs, a disease that costs the country an average of $40,000,000 a year, besides endangering the lives of all who drink milk or eat pork.

From July 1 of this year to September 28 the railroads of the country handled 112,600 more cars of grain than during the same period of 1917, according to figures just issued by Director-General McAdoo This year's figures were 399,770 cars, against 287,170 cars last year.

Michigan's jail population, according to Marl T. Murray, secretary of the State Board of Corrections and Charities, is just one-half what it was a year ago. Many jails are without any inmates. This condition is attributed to prohibition, which has been in force five months.

Connecticut is unable, because of the war demand for labor, to fill her rural schools with teachers at $15 a week. Many schools in consequence were without teachers at the beginning of the fall term. There appears to be no escape from the necessity of putting the teacher on the same footing as other workers.

There are in the United States 5,000,000 automobiles. Allowing five passengers to a car, they could carry 25,000,000 passengers. The 55,705 railroad passenger cars represent a seating capacity of 3,500,000. To handle as many passengers as the autos would require 60,000 new cars, costing $660,000,000, and 14,972 locomotives, costing $524,000,000.

The Non-Partisan League State ticket in North Dakota was elected with but one exception—superintendent of instruction. The League has a large majority in the Legislature. In Idaho, Nugent (Democrat), and Borah (Republican), both indorsed by the League, were elected to the United States Senate. The League also elected the State treasurer and twenty members of the Legislature.

Dr. S. Josephine Baker of New York City quotes statistics of the French army and the New York Health Board to support her statement that "there is three times as much danger in being a baby in a cradle in a crowded city as in being a soldier in the trenches in France." She attributes the high infant mortality rate in the large cities to crowded living conditions, undernourishment both of babies and of mothers, lack of proper medical attention, and the fact that the mothers work too soon before and after the babies are born.

Domestic and Naval

It is estimated that there are a hundred thousand tons of merchandise in New York, valued at $15,000,000, waiting cargo space to Brazil.

The "L. L. Hamlin," three-mast schooner, 140 tons register, built in 1882 and owned by Captain O. A. Gilbert, Boston, has been sold to W. Senior, New York, for $5000.

Two 1000-foot piers, 114 feet in width, are to be erected near the Weehawken terminal of the West Shore Railroad for the New York Central Railroad Company by the Phoenix Construction Company of New York, which has just been given the general contract.

The eighteenth shipbuilding plant to be located on the Delaware River has been incorporated at Philadelphia as the Delanco Shipbuilding Company of Delanco, N. J. The company has acquired property on the New Jersey side of the Delaware River near the junction of the Rancocas Creek.

A spirited piece of salvage work is said to have been recently performed on the "Yangtse" by the Standard Oil Company river steamer "Meitan." The United States gunboat "Palos" had struck a reef ten miles above Ichang, being badly holed forward, and her engines damaged. The "Meitan" got her off, and brought the "Palos" lashed alongside safely into Shanghai, the distance of 976 miles being covered in eighty-one hours. The feat is the more creditable as the "Palos" had her pumps hors de combat, and the "Meitan" had to use her own during the whole time to keep the water in the gunboat under.

The United States alien property custodian has taken over the Hamburg Assurance Company of Hamburg, Germany, which has been doing business in this country since March, 1914, and in 1916 had a local premium income of $4,604,000. The Hamburg Assurance Company owned all of the stock of the International Insurance Company of New York, which has also been taken over and American directors installed. The International Insurance Company is capitalized at only $200,000. In 1917, its premium income was $7,888,413. The affairs of the Hamburg Assurance Company have been fully liquidated, and, after paying all liabilities, approximately $500,000 of net assets remained, which has been taken over by the alien property custodian.

The Canadian Minister of Marine is quoted in an interview from Halifax as stating that the $5,000,000 plate mill at Sydney now under construction for the manufacture of 250,000 tons of ships' plates would be completed by next July. Canada's annual output of steel ships at the present time is 250,000 tons, and the government has under consideration twenty-two steel ships, aggregating in cost $25,000,000, while the number of ships under construction next year would be considerably larger and would cost approximately $35,000,000. Sizes would range from 10,500 tons, 8100 tons, 4350 tons to 3750 tons deadweight, and these ships would be owned and operated by the Canadian government. It is expected that there will be ready for sea this fall two ships, and possibly four.

The Public
A Journal of Democracy
Poverty is A Crime!
It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was
"The Crime of Poverty"
It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.
Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.
Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

News from Abroad

The publication by the British Admiralty of the names of the commanding officers of 150 German submarines disposed of by the British Navy, in order to substantiate the statement of Premier David Lloyd George to the effect that "at least 150 of these ocean pests have been destroyed," indicates that of these 150 German officers but one made his escape. This was Waldemar Bender, who escaped when his submarine was sunk, and is believed to have made his way back to Germany. Of the remaining 149 officers, 116 are dead, 27 are prisoners of war, and six are interned in neutral countries.

Canada has fixed, by an order in council, the rates of pay and allowances for discharged soldiers and sailors undergoing treatment in sanitoria and hospitals. With a few variations, the pay will be the same as that which the man received in active service. Dependents will receive the militia or naval separation allowance. Men who, after their return to civilian life, ultimately break down as a result af their war-time experiences, will be eligible to further treatment. Nearly 5000 soldiers and sailors are under the care of the Department for Soldiers' Civil Re-establishment, the work of which partakes in some degree of that done by the United States War and Labor Departments and the Federal Vocational Board.

Victor Boret, French Food Minister, presided at the ceremony of putting into commission at Havre the steamer "Belle Isle," the first cold storage vessel that France has equipped. The "Belle Isle" is built to carry 3000 tons of cold storage meat on each trip. M. Boret, in his address, announced that another cold storage steamer was being constructed and that others would be built. He paid his compliments to Belgium, Great Britain, and the United States. The latter country, he said, had been generous in aiding the allied nations with men and material. "The Belle Isle," said M. Boret, "is a symbol of our common will to pursue an economic battle with our military battle and to assure an economic victory after the military victory."

What amounts to an unconditional surrender of Germany was heralded to the world on Monday, Nov. 11. While the allied world awaited the Teutons' formal acceptance of the dictated terms of peace, revolution has swept over Germany from north to south. The abdication of the Kaiser, which would have created a profound sensation a month ago, and might have affected the course of the peace negotiations had the mad war lord of Berlin decided to step down and out while notes were being exchanged with Washington, became but an incident in the overwhelming progress of revolution. Councils of soldiers and workingmen have seized authority in nearly every one of the larger cities throughout Germany, offering to co-operate with the newly organized People's Government to maintain order and prevent bloodshed. The German general staff, in accepting the authority of the new Government, significantly declares that it does so to facilitate the work of demobilization of the armed forces that so lately marched out to conquer the world.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

PROBLEMS OF RECONSTRUCTION.

California Federation of Labor Outlines After-War Program.

The recent Convention of the California State Federation of Labor appointed a special Committee to consider and act upon a number of resolutions dealing with matters of demobilization, reconstruction and general after-the-war problems. This Committee has just made public its report. It is a paper worthy of careful and analytical perusal not only by California workers, for whom it is specifically intended, but by the workers everywhere. The period of reconstruction is now with us. We must still do our own thinking. But more than ever before in history is it necessary for all of us to co-operate in intelligent and practical application of our thoughts.

To the Trade-Unionists of California:—

The great world war has suddenly terminated as we all hoped it would. The enemy has surrendered unconditionally and with it has come the long-delayed revolt of the workers in enemy countries against the royal autocrats who were responsible for the war.

From our very entry in the war the workers of California have freely and fully responded to duty's call. Whether enlisted in the ranks of our valiant fighting forces or in the industrial armies at home, in liberty loan campaigns or in Red Cross drives, everywhere the sons and daughters of toil have met the acid test of loyalty.

But our real test is just now beginning, and it will be the most difficult and the most momentous that our State and Nation has ever faced. The coming of peace at this time gives us a preponderant share of the power and prestige of victory while it saves us from paying anything like the frightful costs that have been borne by other belligerents. All of our industries have been speeded up and greatly strengthened; wastes and inefficiencies have been eliminated; our productive capacity has been enormously increased. California and the other Pacific Coast states now lead the world in the production of tonnage. Our resources of labor and utilized resources have been increased while those of other countries have been diminished. We have practically everything that the world needs, and we alone among all the industrial nations seem to be in a position to export in vast quantities the materials needed for reconstruction.

For this reason the California State Federation of Labor can see no possible excuse for the cry that wages shall be reduced to the pre-war standard or that working hours shall be lengthened. The United States Bureau of Labor Statistics, Bradstreets, the "Annalist" and other reliable sources have given no evidence of a return of pre-war purchasing power in the dollar, and if we may believe what the great analytical minds of the world say to us, there will be no direct return to those conditions we enjoyed ten or more years ago.

We call attention to the violent upward fluctuations in prices of nearly all commodities beginning about the year 1896, with the opening up of the Yukon, the development in South Africa, the increased and more efficient facilities by which gold is extracted from the ore, whereby its waste is largely eliminated. Since all of that has been going on, and since the world's markets have been flooded with this additional output, don't misunderstand when it is said that gold has been cheapened; not that any more grains are used when coining the gold dollar, but that when we use the dollar, or its purchasing power, we find that it takes more gold to make the purchase, hence more gold to do the world's business than it formerly did when the metal was scarce, which, conversely, means a rise in prices and increased costs for all commodities. These two causes are most commonly assigned by various authorities for the general main upward trend and which undoubtedly would have continued, although possibly not to such high levels, had there been no war.

Wage standards established during the war have not kept pace generally with increased costs of living commodities. It has only been in some of the most essential war work that seemingly high rates have been paid, but when analyzed and brought down to the absolute facts surrounding the employment, it is found long hours of overtime work and Sunday work have been almost altogether responsible for the fattened pay envelope.

Fully realizing the responsibility of defining a program to be followed by the workers of California, and the struggle that must come in placing comprehensive political or economic changes in effect, your Committee on Reconstruction, appointed at the recent convention of the California State Federation of Labor, still feels that the line of march should always lead forward, and with that thought in mind the following suggestions are offered for consideration and approval:

Demobilization Problems.—We pledge to our returning soldiers full co-operation in the proper readjustment of industrial conditions to conform to the newly established world democracy. To this end we welcome and invite to our councils representatives of the returned soldiers and sailors as soon as they are in a position to take up matters of mutual interest. In no other manner than by such co-operation and by such recognition of their complete community of interest with us, can we counteract obvious preparations to exploit the soldiers of uniform to the detriment of their brothers, the soldiers of industry. In no more effective manner than through the labor unions themselves can the release of the soldiers into civil life be accomplished without a disastrous depression of wages.

We look to the Federal Government, under whose auspices and authority our military and naval forces were assembled, trained and sent overseas, to plan carefully in the work attendant upon the demobilization of these great forces and the effect thereof upon the Nation's industries, to the end that panic shall not prevail.

Organizing the Unorganized.—Incidental to the disturbed conditions following the ending of hostilities, many of the workers will for the time being be unmindful of the very necessary work of organization. We cannot too strongly urge the necessity of carrying on this work with greater energy than ever before. All that has been accomplished in the past was brought about through organization and co-operative effort. Practically all that is to be accomplished in the future will follow constructive organized effort.

Shorter Workday.—We demand that a standard workday of not more than eight hours be established and recognized in all industries where it does not yet obtain, and we favor a further reduction of the hours of labor to minimize unemployment in any industry where a surplus of idle labor may exist, or where conditions are such that even eight hours of work tends to exhaust and devitalize those employed.

Co-operative Organizations.—With the constant depreciation of the purchasing power of the dollar the disbursement of the workers' earnings has become a subject of their concern second only in importance to that of wages received. The failure of sporadic and indifferent efforts at co-operative organization should not be permitted to outweigh the great advantages inherent in co-operation.

We therefore urge the establishment of co-operative organizations for the distribution of commodities and call attention to the fact that the vast investments of wage workers in Liberty Bonds and War Savings Stamps has placed in their hands easily convertible securities which can be made the basis of credit in the formation of such co-operative enterprises.

Land Taxation.—We urge the adoption of a system of land values taxation that shall include a supertax on all idle, uncultivated land and land held for speculative purposes; a system that shall at once tend to disintegrate monopolistic ownership of large areas and that shall place a larger share of the burden of taxation on monopolistic wealth at its chief source.

Land Colonization.—As an auxiliary and immediate measure we urge an extension, without delay, of the state land colonization plan that shall give to those of our soldiers who so desire an opportunity of gaining a direct economic interest in the soil they have defended with their lives.

Public Ownership.—We insist upon public ownership of public utilities and all properties incidental to their operation. We demand retention by the Federal Government of the railroads, express and telegraph companies.

Manning Our Merchant Marine.—We vigor-

ously protest against any return to the pre-war policy of manning our offshore merchant marine with Asiatics. The merchant and naval seamen who served our country in time of war—who voluntarily manned our ships bound for submarine-infested waters—must be given the same protection against competition with cheap Oriental labor as is given to the workers ashore. The Seamen's Act, instead of weakened, should be strengthened to the end that our young men who have recently responded to the call of the sea will be encouraged to remain there and make it their life work.

Labor Representation.—The issues drawn by the aftermath of war make it more and more apparent that labor cannot, with assurance, look for the best protection of its interests in matters of government to any group outside itself. We therefore demand that representatives of labor be included as members of the State Civil Service Commission, the Board of Regents of the State University, the State Highway Commission, the State Board of Education and all other appointive state commissions where Labor is not now represented.

Progressive State Government.—We insist that there shall be no curtailment in the progressive and humanitarian work of our State Government. Certain reactionary forces, under the guise of economy, are right now attempting to muddle and becloud this issue. But they must not be permitted to make thrift and economy a slogan for reaction. We want still better laws for the protection of the workers. To be specific, we demand the enactment of every measure enumerated in the platform of the California Union of Producers and Consumers. California commissions have an important part to play in the proper working out of the various post-war problems and any movement to hamper the work of the commissions, especially during the reconstruction period, should be emphatically discouraged.

In conclusion we point to the fact that the defeat of autocracy upon the battlefields of Europe has been followed by more or less serious revolutionary movements among the various war-ravaged nations. It is evident that a changed psychology is being instituted. This change, whether the employers will it or not, threatens to extend to the very fundamentals of social and political structure. It is manifested in the social upheavals which have become actual realities in every country of Europe. Only an intelligent response to and direction of this demand of the workers for a larger participation in the proceeds of industry can avert disaster to established government. This is a warning not inapplicable to the employers of California.

We therefore strongly urge upon the representatives of California industries that the same co-operation with labor be manifested in dealing with the problems of readjustment as prevailed during the period of the war. Only when this basic principle is accepted by capital as well as by labor, can our industrial problems be equitably adjusted without the injection of European Bolshevism.

Respectfully submitted,

PAUL SCHARRENBERG, San Francisco,
Committee on Reconstruction.

San Francisco, Cal., Nov. 18, 1918.

HEALTH INSURANCE ENDORSED.

Health insurance, as a protection to women workers and to the wives and children of wage earners, was endorsed by the recent conference of women trade union representatives called at Washington by the new Women-in-Industry Service of the Department of Labor. Other resolutions demand equal pay for equal work, enforcement of sanitary conditions in factories, the eight-hour day and representation of women on various boards.

The lessening of the daily hours of labor increases the total products by increasing the opportunity and disposition for consuming them. The sum of the difference between a savage and a civilized state is merely the difference between men who have time and inclination to gratify their physical needs only, and men who have time, inclination, and determination to indulge and cultivate the intellectual side of their nature.

"IDEALS" FOR THE ASH CAN.

Now that the war is nearly over, and the allied statesmen see victory within grasp, they are largely ceasing to talk about ideals, and are getting down to the practical business of remaking the map. The indications are that most of them want to remake it on the old basis of seizing all they can get, and letting their confederates have what is necessary to pacify them. In an illuminating article in the Kokumin, as reported in the Sun, Marquis Okuma, former Premier of Japan, outlines what the Japanese terms ought to be. Like everybody else—except the Republicans, apparently—he, of course, accepts President Wilson's fourteen points, which work out as follows on the basis of Germany's complete surrender: "In regard to the western front, the Balkans, and the African colonies, Japan should support England, France, and America." "The indemnity question should be decided at a conference of the Allies." Samoa should be left to Great Britain and the United States, and Australia should hold New Guinea. As to the future of Germany and Russia, Japan should "cooperate with the Allies' view for the future perpetuation of world peace." She should also "confer with the Allies regarding the maintenance of order in Siberia. No Power should have a paramount voice in regard to concessions and other interests there." The principle of the open door should be maintained in China. "The Marshall, Caroline, and Ladrone Islands, now occupied by the Japanese, are valueless to Japan, but dangerous in the hands of Germany. As there is no reason to give them to a third party, Japan should continue in possession." Finally, "Tsingtau, the port of Kiaochau, and the South Sea cable should be transferred to Japan, also the Thinan railway, Germany purchasing both properties from their owners and transferring them to Japan."

Doubtless it is necessary to be "practical," but if the war has been fought for this sort of thing, we ought to cease here and now to talk humbug like self-determination, the rights of small nations, no annexations, no punitive indemnities, and all the other principles which, originating in Russia, have yet come to be identified with the name of President Wilson; for a settlement of this sort would make them plain humbug, no more, no less. Marquis Okuma in effect would have Japan give the Western Entente Powers carte blanche in Europe and Africa, in return for their support of Japanese pretensions in the East. "Maintenance of order in Siberia"—we already know what that means. "The open door in China"—a fair phrase under whose protecting mantle Japanese imperialists, exactly like those of other countries, have kept up a process of uninterrupted aggression on the helpless Chinese. Unconsidered islands in the Pacific to go to Japan by default—but they are handily located for naval purposes. And finally, Tsingtau, stolen from China by Germany in 1897, to be retained by Japan, along with the Thinan railway and the South Sea cable—Germany, incidentally, footing the bill. This is the same Tsingtau which the Japanese in 1914 solemnly called on Germany to surrender in order that Japan at the end of the war might return it to China. We do not criticise the Japanese people, for whom we have the highest admiration and respect, but any government that puts forward these terms, or anything like them, will have played traitor to its highest trust. Marquis Okuma's terms are based on the old evil principle of dividing the "swag" among the victors. If the Japanese Government, or any other government, puts forward such a program, it ought to be buried ocean-deep under the wrath of an outraged people who have been called on to shed their blood for something wholly different, namely, a new world order based on justice and mutual rights, with international guaranties to make war unnecessary and diplomatic plottings against the interests of the people as difficult as possible. Shall the peoples of the world allow their rulers in the hour of victory to make of no effect the unexampled sacrifices of the past four and a half years?—The Nation, New York.

A "CONCRETE" CONVENTION.

The first annual meeting of the International Concrete Ship Association was held recently in New York at the headquarters of the association, 7 East Forty-second street. Several papers were read, and it appears that the problem of reducing the weight ratio of concrete vessels is in process of solution. A light aggregate has been developed and found satisfactory. In itself it floats and weighs about 105 pounds (from 100 to 110 pounds per cubic foot) with better bonding and all characteristics, so that the seven-day test has shown well over 4000 pounds crushing strength. Density tests show less than 2½ per cent. absorption. On the question of ship design, Mr. R. J. Wig, head of the Concrete Division, Emergency Fleet Corporation, advised the meeting that the latest designs of concrete craft represented a carrying capacity efficiency of from 61 to 62 per cent. A report published in January, 1918, based on figures compiled a few months previous, indicated that the then knowledge of experts in concrete, cement, and ship design, put the capacity efficiency of small concrete ships at 45 per cent. Production figures reported at the meeting shows that the tonnage of concrete ships, tankers, ocean barges, lighters, car floats, and scows—including those represented by the Army, Navy, Inland Waterways Commission, and work by private capital under permits or in progress without permits—totals approximately 580,450 deadweight tons. Besides this, new contracts now to be let include one group totaling 60,000 tons, and another approximately 75,000 tons, in addition to private work totaling larger figures, and in a few weeks an additional 200,000 tons through Government agency. In round numbers, it is understood that before the end of the year approximately a million tons of concrete craft will be in the course of construction. Reports have been received indicating that permits will shortly be granted for the building by private capital of several additional groups of ships. Mr. Wig spoke fully and enthusiastically on the concrete ship situation.

If consistency were a marketable commodity the average employer would probably keep in stock an entirely different brand of anti-union argument (?).

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

State Insurance Cheapest.

In his annual report to the Ohio State Federation of Labor President Voll presented these statistics to show the value of State-controlled compensation to injured workers:

"The earned premium of the Ohio State insurance (employers') fund for the year ended May 15, 1918, is $9,442,125.28. The entire expense of operating the Ohio State insurance fund for the year ended May 15, 1918, has been $327,806.04, which is 3½ per cent. of the above earned premium.

"The vital economic significance of this remarkable expense ratio of 3½ per cent. is made clear when attention is called to the fact that the liability insurance companies have found it impossible to provide workmen's compensation insurance to employers at an expense ratio to their earned premiums of less than 37½ per cent.

"As is shown under the 'Summarization' preceding, the application of their rates to the payroll of the subscriber to the Ohio State insurance fund for the year ended May 15, 1918, would have developed an earned premium of $16,224,403.87—37½ per cent. of which is $6,084,151.45. The Ohio State insurance plan has provided this insurance at an expense of $327,806.04—thereby saving in this one year, in administrative cost, the significant sum of $5,756,345.41."

How Living Costs Jump.

The National Industrial Conference Board has issued a pamphlet on "War Time Changes in the Cost of Living." The board represents seventeen manufacturers' associations.

It is stated that the expenditures of the average family is divided as follows: Food, 43.1 per cent.; rent, 17.7 per cent.; clothing, 13.2 per cent.; fuel and light, 5.6 per cent.; sundries, 20.4 per cent.

The board finds that "in representative communities between the summer of 1914 and the summer of 1918" the cost of food increased 62 per cent., the cost of shelter increased 15 per cent., the cost of clothing increased 77 per cent. and the cost of fuel and light increased 45 per cent.

"The four major items—food, shelter, clothing, fuel and light—together constitute approximately 80 per cent. of the cost of living of the typical wage earner's family. For these the average increase between the summer of 1914 and the summer of 1918 was 52.5 per cent."

Union Methods Urged.

The recent English railway strike was not caused by organized labor, but by "disorganized labor—mere bolshevism," says Reynolds' Newspaper of London, England.

This publication, which is among the most forward looking in England, declares that the welfare of the workers depends upon a strict observance of trade union methods.

"We have a firm and unalterable conviction," says this paper, "that it is in the power of organized labor to adjust the bases of industry in this country so that it shall receive a full and just reward for its exertions, and see that those who have, for no adequate service, taken toll of the labor of those who toil shall find no such chance in the future. This it may do legally and in pursuance of the sound principles on which trade unionism is based. Its progress will be like the march of a disciplined army. Anything that tends to destroy that process is a danger to labor. It is not trade unionism at all, but just bolshevism. And those who hope to gain from disorganization and disunion the things they would gain from unity of purpose and action are blind leaders of the blind."

United States to Open Hotel.

About December 15 Uncle Sam will open his first hotel in Washington, D. C., for women employed in war work, according to an announcement by the United States Housing Corporation. It is stated that 1800 women will be accommodated with well furnished rooms, two meals on week days and three meals on Sundays, at from $40 to $45 a month. Every room will have running hot and cold water. Baths and sitting rooms will be placed at convenient points on each floor. Laundering will be done on the premises at the lowest possible rates and everything reasonable that can be provided for the women is promised. Space will be allotted to the different Goverment departments on the basis of the number of women workers employed by each.

The United States Housing Corporation is a non-profit organization controlled by the Government. Its purpose is to provide housing for war workers in the District of Columbia and munitions workers elsewhere. William J. Spencer, Secretary-Treasurer of the Building Trades Department, American Federation of Labor, is one of the corporation's ten directors.

Welfare of Workers Precedes Business.

Material progress is of value only as it assists the individual to attain human possibilities, is the declaration of a British Government Committee on Adult Education which reports to the Minister of Reconstruction its findings on the necessity for improved conditions of the workers.

"If the individual is to make the most of his powers, if the citizen is to be worthy of the responsibilities thrown upon him by the ever-increasing complexity of life in a modern community—in other words, if education in any broad meaning of the term is to become a reality, certain definite conditions of life are indispensable," the committee says.

"The paramount consideration is that of the individual as a member of society. Material progress is of value only in so far as it assists towards the realization of human possibilities. Industry and commerce and the social conditions which are in a large degree dependent upon them must, in our opinion, be regarded from this point of view, and if they cramp the life of the individual, no amount of economic argument will suffice to justify them.

"In considering industrial and social con-

World's Workers

The British Labor party at a conference on November 14 decided by a large majority to withdraw its members from the Cabinet at the close of the present Parliament, which is expected shortly.

The British Labor Conference of Women represented over 250 professional, industrial, political, or feminist societies, 60 of which were outside of labor organizations, but all of which represented workers with hand or head from all parts of the country. A demand was made for a Ministry of Public Health dissociated from the Poor Law taint, and making full use of women in all departments. A demand was made also for admission to the legal profession, and for the right to vote at 21.

At the invitation of the British Minister of Labor, representatives of the employers and trade unions in the iron and steel trades met in conference at Montagu House, for the purpose of discussing the general position of the trade after the war, from the point of view of setting up industrial councils on the lines of the Whitley report. The Iron and Steel Trades Confederation and the Scottish Millmen's Association held aloof from the proceedings on the ground that unrepresentative unions had been invited.

An effort is being made to make the British National Farmers' Union more fully representative of the farmers of the country as a whole. In order to bring this about the executive committee of the union has sent out a notice to all county secretaries of union branches asking for the names of all farmers' unions and clubs in the country not yet affiliated with the National Farmers' Union. Instructions have been received by Mr. Daw, the new Parliamentary agent, with reference to Farmers' Union candidates and the program to be submitted to any candidate seeking the support of the farming interest at the next election.

Stories of a tremendous strike by Belgian workmen in the occupied sections of their country have reached America from time to time. Further confirmation comes in secret correspondence from Ververs, published in the Belgian Bulletin: "In spite of the most enticing offers on the part of the Germans to obtain workers, no one nibbles at the bait, although the poverty grows blacker and blacker." Reports which reached the Department of Labor a short time ago were to the effect that a million Belgians had refused to do any work for the Germans. This informaton, though unofficial, came from a Belgian officer.

How the feelings of the average labor organization of Germany have changed with the progress of the world war is indicated to some degree by the words with which these bodies have accompanied the publication of death notices in the Socialist newspapers of their fallen members. During the first year of the war the wording was almost always as follows: "——— died heroically upon the field of honor." In the second year it was said: "——— sacrificed his life for the Fatherland." In the third year: "——— fell abroad in the performance of his duty." During the last year the notices began: "As further victims of the cruel war there have been reported to us ———."

NOTICE.

Masters, Mates and Pilots' Association of the Pacific has opened a branch office at 529½ Beacon St., San Pedro, Cal.; Capt. H. C. Frerichs, Agent.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Pacific Coast Marine.

Theodore Wicks, the San Francisco diver, is at Mazatlan, attempting to salve the boilers and machinery of the Shipping Board steamer "Blackford." When Captain Curtis went to Mazatlan to investigate the wreck he found that the capsized hull was on the beach north of Mazatlan, but it was not known if the machinery was intact or had dropped into the sea when the ship turtled. No report has been received from Wicks.

A resolution introduced by Supervisor Richard Welch, requesting San Francisco's representatives in Congress to make an effort to have a preliminary survey for a bridge over the Golden Gate to connect San Francisco with Marin County, was passed by the San Francisco Board of Supervisors last week. Welch said that an all-rail route to Eureka via the bridge and the convenience to motorists would more than justify the bridge.

A speed motor boat of the heavy type, capable of making not less than twenty-five miles an hour, has been ordered by the Crowley Launch and Lighterage Company from the John Thwig & Sons Co. of San Francisco. Work will be started at once and every effort will be made to get the new craft into commission before spring. The new craft will be one of the fastest in local waters and will supply a need that has existed for a long time. The boat will be used especially for emergency work of all descriptions.

The gigantic shipbuilding program of the United States Shipbuilding Corporation, as planned at the outbreak of the war, will continue, and ships will be turned out as contracted for, in the opinion of Eric V. Hauser, vice-president and general manager of the Grant Smith Porter Shipbuilding Company of Portland, Ore., who arrived in San Francisco during the past week. "Peace will have no effect on the shipbuilding program," said Hauser, who is at the Bellevue Hotel. "There will be a greater demand for ships than ever before. Private concerns that

Sidney J. Jennings, president of the United States Fuel Company, which supplies the 60,000 tons of King coal shipped into San Francisco and adjacent districts each month, inspected the bunkering facilities of the local harbor during the past week. He was accompanied by President James B. Smith of the King Coal Company. Jennings said the Utah coal fields were amply able to supply all the fuel the ships at the port would ever need. The inspection was made in one of the Crowley launches. Jennings is also president of the American Institute of Mining Engineers and a director of the United States Smelting & Refining Company.

Presaging what is generally believed here to indicate a new demand for wood ships, was the deal consummated during the week whereby Thorndyke & Trenholme of Seattle, completed the purchase for French interests of six wood auxiliary schooners, the entire output of the William Lyall & Sons Company at Vancouver, B. C. Only one of these vessels has yet been launched, but the deal calls for the delivery of all six in five months. The deal is taken as an indication of a demand from foreign countries for wood ships, and Thorndyke & Trenholme announce that they expect to complete further deals of the kind very shortly. The six ships will be outfitted and loaded for French ports here.

Rescued after nine days in an open raft, in which they had hastily embarked when the dynamite-laden steamship "Dumaru" was struck by lightning in midocean on October 16, Captain C. E. Borrisen and three members of the crew have arrived at San Francisco on the U. S. transport "Logan" that picked them up 220 miles from Guam when their water cask was dry and their only remaining food was a few biscuits. The captain, Water Tender Claude Canfield, Cook Edward Gaston and Seaman Oscar Morris are the survivors of the little shipwrecked party. Second Officer Staats, despite the tender care afforded him on the transport, died two days after being picked up. Two of the lifeboats of the destroyed vessel, with twenty-three officers and seamen, landed at Philippine ports after drifting about with hardly any food or water for about a month. The whereabouts of a third lifeboat are unknown, so far as reported here.

The facilities for recalking and repairing wooden ships around San Francisco Bay has been increased with the completion of the new marine ways at the Barnes & Tibbetts plant at Alameda. In addition to this, there will be other marine railways installed in the near future. The new Tibbetts ways will accommodate any vessel up to 5000 tons deadweight, and this will be more than ample to handle any of the wooden ships built on this Coast and also big enough for a considerable number of the steel ships. The ways at the Moore plant are being repaired after the removal of the Shipping Board steamer "Coconino," which was jammed about one-half way from the bottom for many days. The local plants are expected to develop sufficient facilities to care for all of the "sick" wooden ships that now need the attention of the repair yards. have been stripped of their vessels will need ships now more than ever." Hauser, who is also president of the Multnomah Hotel at Portland, says the Grant Smith Porter Shipbuilding Company holds the record for wooden ship construction. Since June 9, says Hauser, his corporation has turned over twenty wooden ships to the Government. Their contract calls for fifty. Each of the ships is 3600 tons.

As a result of an investigation of the loss of the Shipping Board steamer "Blackford," a 3000-ton steel vessel, which foundered 125 miles south of Cape St. Lucas in a hurricane September 26, United States Local Inspectors of Hulls and Boilers Captain James Guthrie and Joseph P. Dolan have revoked the license of Captain T. A. Peterson, master, and suspended the license of Chief Engineer George E. Waxham for a period of six months. Other officers of the "Blackford" drew a suspension of three months each. The vessel was leaking badly when departing from Seattle and had taken four feet of water when departing from San Francisco. The inspectors charged also that the officers were derelict in their duty and jeopardized the crew by failure to report the condition of the vessel at Seattle and San Francisco and later by not seeking shelter from heavy seas in the Gulf of California, or in the lee of the Ceralbo Island when engine trouble developed. The "Blackford" was bound for Chile and was laden only with coal ballast.

Fire broke out in the historic old Pacific Mail steamship "Pennsylvania," which has operated out of San Francisco for nearly half a century, and the vessel sank in the open roadstead of Iquique, Chile, on November 13, according to cable advices. Captain Liberoth and the crew escaped in the boats, but the vessel and 1800 tons of niter are a loss and cannot be salvaged owing to the depth of water. The history of the craft, which was built of iron at the Cramps shipyard at Philadelphia, dated from the time it went into the Atlantic service in 1872 on the run between New York and Antwerp. It was known as one of the palatial liners of that day, and when General U. S. Grant started on his famous tour around the world he left New York as a passenger on the iron ship. The "Pennsylvania" was then purchased by the Pacific Mail Company and brought to this Coast. It was used on the run to Alaska for some time during the gold rush, and has for some years been employed on the run between this port and the lower and west coast. The steamer was 340 feet in length, 43 feet beam, 43 feet deep and 3400 deadweight tons. An offer of $500,000 was refused by the owners one year ago.

Following the announcement from Washington that the resumption of construction work will again be permitted and the necessary material supplied the State Harbor Commissioners have decided to proceed immediately with the development of the San Francisco waterfront. Commissioner John J. McCallum made an official announcement, during the past week, regarding the work to be done as follows: The equipping of the piers with up-to-date labor-saving devices. The extension of existing short piers to the pierhead line. The construction of pier No. 1, adjacent to the Ferry Building on the north, for the use of bay and river commerce. The concentration of coastwise shipping, with adequate waiting rooms for passengers. The provision of adequate facilities on Islais Creek for taking care of the rapidly developing Oriental oil business. The construction of docks and warehouses at Islais Creek to take care of through freight, having in mind vessels of increased tonnage, thus leaving the docks adjacent to the business section to be used for local freight. This improvement will be the first unit of what will, in the near future, be a great terminal. Warehouses adjacent to the Embarcadero and on the bulkheads between piers to take care of at least the overflow business. The adoption of a system of port charges as favorable to shipping interests as any on the Pacific Coast. The urging of the equalization of absorption charges on through freight by railroad companies, so that this port may not longer be at a disadvantage.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

Headquarters of the Sailors' Union of the Pacific, 59 Clay Street, San Francisco.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, NOVEMBER 20, 1918.

WHAT'S DOING IN EUROPE.

A New Zealand labor exchange, "passed by the censor," contains the following timely reference to press stories about Russia:

The situation in Russia is wrapped in obscurity and gloom.

Daily for months we have been regaled with press stories manufactured in the various European capitals, including Berlin, and published with no other object than the discrediting of the working-class Government of Russia.

That campaign of falsehood carried on assiduously and unscrupulously has succeeded only too well. The truth has only been allowed to percolate through at long and rare intervals, and even then generally in twisted and distorted form from the pens of but a few courageous lovers of Democracy and Freedom, who have refused to sell their souls, intellect and conscience, to the international gang of capitalists who are flocking together like eagles to feast on the carcass of Russian liberty.

The real situation in Russia is and has, indeed, been a closed book to the average American. A hundred or more wise men have written about present conditions in that country, each in his own way earnestly attempting to tell the truth. But no two of them seem to agree upon any of the alleged facts presented for our consumption.

The truth seems to be that no single person can possibly know all about the present situation in Russia. Hence, the most truthful word-pictures we receive present, at best, only a glimpse at that composite screen which must be seen as a whole to gain a proper perspective.

Since the very beginning of the Russian revolution that vast country has become a regular Pandora's box. And now Germany, Austria and, from present indications, some of the smaller surrounding countries as well, are to be added to the territory where millions upon millions of human beings are striving and struggling for Democracy and Freedom.

Truly, we can well afford to hesitate and "think" before swallowing some of the extraordinary yarns from Europe, tastily dished up for us by capitalistic press agencies.

The newspapers of America, with few honorable exceptions, are owned and controlled by men who thrive on special privilege and who naturally hate and despise genuine Democracy under whatever name it may flourish.

So beware, fellow workers, of poisoned gas spread via carefully manufactured stories. The plutocrats of America would a thousand times rather perpetuate Czars, Kaisers and all that goes with it, than to spread across the map of Europe a half dozen working-class republics.

The titular heads of the ancient autocracies in Central Europe have been deposed. Let us give the people who have carried them upon their backs a reasonable chance to straighten their limbs in the exercise of a glorious newly-won freedom!

THE SAME OLD STORY.

When the excursion steamer "Eastland" capsized while loaded to the gunwales with human freight, some three years ago, there was a terrific uproar for a vigorous investigation and a nation-wide demand to punish those guilty for the disaster.

Well, the "usual" investigations have been held. The courts have been rendering the "customary" verdicts, all in favor of the particular property rights involved in this case.

The United States Supreme Court has just had the last say and has, of course, upheld the decision of a Federal court in Chicago that a claim of $34,500 for raising the "Eastland" is a preferred claim.

This decision destroys any hope that relatives of the eight hundred victims can secure damages, as the towing company's claim and other expenses will wipe out the $46,000 for which the boat was subsequently sold.

The "Eastland" was built for freight-carrying purposes, but later was placed in the excursion business. Chicago trade-unionists warned authorities of the danger of an accident, because the vessel was top heavy and "listed" dangerously when her decks were crowded. These warnings were unheeded and on July 24, 1915, the boat rolled over while tied to the dock. She was loaded with 3,000 excursionists at the time.

Thus, there has been added another chapter to the bulky volume entitled "The Same Old Story." Plenty of investigation and no action! Nobody hurt except the victims of the disaster. Nobody punished except the victims' dependents!

Mr. Charles R. Page of San Francisco, a member of the United States Shipping Board, has suddenly tendered his resignation, and according to press dispatches, his resignation will be accepted. The JOURNAL has no information indicating the cause for Mr. Page's sudden desire to terminate his services on the Shipping Board. It is highly significant, however, that the resignation should be forthcoming at a time when he did not find everything "plain sailing" in urging the adoption of an open-shop or anti-union manning policy. The report of his efforts in this direction came as a great surprise to San Franciscans who knew him well, because he had never participated in any of the union-busting schemes launched at regular intervals by California-street money bags. Perhaps his resignation was due to entirely different reasons, but, as stated, it is significant that he should quit before finishing his open-shop drive.

CO-OPERATION.

All who have delved into the history of the workers' struggles for a more equitable distribution of the good things in life know the story of the twenty-eight weavers in Rochdale, England. Back in 1844, following one or two precedents, they joined forces, started a store, and set in motion the co-operative movement in Great Britain.

During the past year, members of the various co-operative societies in England bought from their organizations over a billion dollars' worth of goods at a saving of from 8 to 20 per cent.

In America, co-operation has not taken hold; but in the coming period of reconstruction there is very likely to be a decided change in that respect. Amongst the great social experiments, some fundamental and lasting, others not, the co-operative movement should be studied. It is destined to be a tremendous influence.

Emerson P. Harris, President of the Montclair (New Jersey) Co-operative Society, has written a scholarly, practical, readable and up-to-date study of the Co-operative Movement all over the world. It is a suggestive book, by one who has for years studied European developments and who is applying their teachings in his own locality.

Someone has stated that most members of the British Co-operative Societies "have eaten their way into a home." Certainly, too, they have learned higher human values in merchandising. It is significant that in every contest with the trusts (the soap trusts in England, the packers in Switzerland, and the sugar trusts in Sweden), the co-operative societies have scored decisive victories. They are now the largest manufacturers of the articles involved in their tremendous battles with these Big Business combinations.

The forces that seek the emancipation of the workers have always retarded attainment of their common aim by working at cross purposes; yet it is obvious that no matter how divergent their views, bitterness and dissension amongst them must be avoided in the interest of the general class wellbeing of the wage earners—in the interest of the establishment of fundamental democracy.

Through political working class organization Socialists seek to secure for the worker a system under which he shall receive the full social value of his toil. The goal of trade-unionism is to secure for the worker equitable wage and working conditions.

In the formation of the new economic and industrial system forged by war we must look toward consumers' co-operation and common ownership of public utilities and life's resources. But it is imperative that we have unity of all forces that believe in the fundamental principle of "Equal Rights for All, Special Privileges for None" and the equally great principle of "The Greatest Good to the Greatest Number."

Co-operation, the collective buying and selling of commodities, must be understood and worked for, along with the great basic reform—the freeing of the world's natural resources for the use of all the people. For this Mr. Harris' new and valuable book cannot be too strongly recommended.

The publishers' standard edition of "Co-operation" sells for $2.00 but The New

York Public has ordered a special edition, printed from the same plates and on the same paper stock; well-bound in cloth. It will be sold at the low price of $1.10 postpaid. Address, The Public, 122 E. 37th Street, New York.

SURPLUSES AND TAXES.

The Atlantic Refining Company, a petroleum concern of the Standard group, has a surplus of $45,000,000 which it is thinking of distributing in the near future. Nothing is said, however, with regard to the distribution of this sum among the consumers who have built up the surplus. An even more important observation would be to the effect that, so far as known, no steps are being taken to make the accumulation of such surpluses impossible.

Any casual reader of the foregoing paragraph will doubtless take it for granted that this is the wail of some dissatisfied Socialist, or perhaps of a pestiferous Bolshevik.

But far from it, kind reader. It is a random selection from the editorial page of the staid and conservative Christian Science Monitor.

This is a most hopeful sign and should give real comfort to Amos Pinchot, who so strenuously advocates the creation of a Federal Business Administration for the purpose of freeing the Government and the public from the evils of the profiteer. Mr. Pinchot, by the way, states in a letter to Chairman Kitchin, of the Ways and Means Committee, that 287 of the larger business corporations in the United States made excess profits aggregating $1,559,331,730 during the fiscal year 1917. Then, in support of his claim that the 80 per cent. excess profits tax would not crush business, Mr. Pinchot cites the increase in British trade under an 80 per cent. tax. Great Britain's export trade in 1915 was £384,900,000; in 1916 it was £506,300,000; and in 1917 it was £526,000,000.

To be sure, all of this is beside the question what to do with that $45,000,000 surplus of the Atlantic petroleum concern. But it is not so far away from the problem of how to prevent the future accumulation of such surpluses. Proper taxation during the war is quite important, but not nearly as much as the levying of an equitable and just tax in times of peace. We have many years of peace to every year of war, and it is during the years of tranquillity that the present war debts will be liquidated. Why does not the Christian Science Monitor take the lead in that direction?

Victor A. Olander, Secretary of the Sailors' Union of the Great Lakes and a member of the National War Labor Board, is confined to his home at Chicago, due to a general physical breakdown. Olander has been a regular human dynamo. For years he has worked from twelve to sixteen hours per day, without intermission. The additional work and responsibilities which were entailed by his membership on the War Labor Board finally proved more than even his powerful constitution could endure. Here's earnestly hoping for his early and complete recovery. All who know Victor Olander and his worth will join in the wish that he be spared for many years of further usefulness in the great movement he has so signally served and honored.

"Recognition of the union," after all, implies merely a guarantee of good faith on the part of the employer toward his employees.

THE MISSISSIPPI BARGE FLEET.

Facts About the Latest Developments in Transportation on the Upper Stretch of Our Greatest River.

The U. S. Government having recently decided to take an active part in the development of transportation on the Mississippi River as an aid in the general transportation problem of the war, it will, no doubt, be interesting to learn of the progress that has been made toward the consummation of this enterprise on the upper stretch of the river between St. Louis and St. Paul.

Contracts have recently been let for the construction of nineteen barges and contracts for four steamers to tow them will follow shortly, and the whole fleet will cost, approximately, $3,360,000. The plans for the barges and boats have been prepared by Mr. W. S. Mitchell, assistant engineer in charge, U. S. Engineer Office, St. Louis, who has kindly furnished the following data:

The barges had to be so designed that they could carry economically large tonnages of low-class bulk freight like ore, coal, steel and lumber, or oil. The limiting navigable draft during low water season in the Upper Mississippi River is 4 feet for a wide tow. The limits of length and width were imposed by bridge spans and locks. There are fourteen bridges between St. Louis and St. Paul; all but one of the bridges have clear spans of at least 150 feet, through which three 48-feet barges may be passed abreast. There are two locks at Keokuk and at Moline, and there soon will be three, as an additional lock is being constructed on the Upper Rapids at Smith's Island, a few miles above Moline. The clear length limit at the present Moline lock is 300 feet.

The problem, therefore, was to design craft which should handle up-stream tonnage against rapid currents, and could be operated profitably on a depth of 4 feet in time of low water in a country whose rail transportation is on a lower ton-mile basis than that of any other country of the world.

The plans which have been developed contemplate the construction of nineteen steel barges with double bottoms. These barges will be 300 feet long, 48 feet beam and 10 feet deep, with 8 to 9 feet full-load draft. They will be double-enders, with modified spoon bows. Such a barge will carry 3000 tons on 9 feet, and on 4 feet draft at time of low water, 850 tons. A tow with three such barges, which is the best approved arrangement for a river towboat, would thus carry 9000 tons at high water and 2500 tons at low water.

The barges will be built with open cargo hoppers, 36 feet wide by 256 feet long and 6 feet deep, with the bottom 5 feet above the bottom of the barge. The hopper will thus leave a 6-foot deck on each side of the cargo space, which will be surrounded by a raised coaming.

The barges will be equipped with pipes and pumps so that they may carry oil in the double bottoms. The location of the great oil fields of Southern Illinois and Louisiana relative to the Mississippi River makes this a desirable feature.

Each barge will have anchors, and rudders so that if tandem towing by hawser, as is common practice in Europe, sholud be required, the equipment will be adapted to it.

The towboats also will be steel throughout and will be the most powerful of their kind yet designed. While they will represent a distinct advance upon any equipment now in service, no detail will be embodied whose use is not warranted by the records of actual experience under severe operating conditions.

The towboats are designed to meet more exacting conditions. They must furnish 200 h. p. at high water and carry a day's coal on a draft of 3 feet for low water work. The boat which has been designed to achieve this will be 234 feet long by 58 feet wide. An idea of the difficulty of floating the requisite power on a boat of these dimensions and draft may be judged from the fact that the towboat "Sprague," the most powerful river towboat thus far constructed in the United States, develops approximately the same power on a draft of 7 feet with a hull length of 264 feet and a width of 61 feet.

The new towboats will have modern marine engines. The boilers will be water tube, or combination water tube and fire tube, carrying 250 pounds pressure. Boilers have usually been the weak point of river steamers. The old, big flue boiler of the ordinary river boat is greatly overtaxed, being called upon to evaporate as much water on 4 square feet of heating surface as is evaporated by 10 square feet of surface in an ordinary land installation.

The new towboats will have the boilers and engines placed in a sunken hold, about 1 foot above the water line of the boat, in order to make a low model and save weight. They will be provided with "towing engines" to keep an unvarying stress on the hawsers in towing barges tandem. The wheel will be a stern wheel, about 21 feet in diameter by 40 feet in breadth. The boats will be equipped with auxiliary rudders at the rear of the wheel. These rudders were borrowed a few years ago from the practice of steamboats of the Yukon

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Nov. 18, 1918.
Regular weekly meeting came to order at 7 p. m., Ed. Andersen presiding. Secretary reported shipping good. One hundred dollars was donated to the United War Work campaign. Election of delegates to the I. S. U. of A. convention, which meets at Galveston, Texas, in January, was proceeded with.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Nov. 11, 1918.
No meeting. Shipping slow; men scarce.
J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government St.

Vancouver, B. C., Nov. 11, 1918.
Shipping fair.
WM. HARDY, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Nov. 11, 1918.
No meeting. Shipping and prospects fair.
H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, Nov. 11, 1918.
Shipping medium.
P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Nov. 11, 1918.
Shipping fair; few members around.
ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, Nov. 11, 1918.
Shipping medium; prospects fair.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, Nov. 11, 1918.
Shipping good; members scarce.
HARRY OHLSON, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Nov. 4, 1918.
Shipping good; prospects fair.
R. H. BLACKWOOD, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Nov. 14, 1918.
The regular weekly meeting was called to order at 7 p. m. Eugene Burke in the chair. Secretary reported shipping fair. Nomination of delegates to the International Seamen's Union convention and balloting on officers for the ensuing term were proceeded with. Donated $100 to the United War Work Campaign. Shipwreck benefits were ordered paid to two members wrecked on Barge No. 95.

EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, Nov. 8, 1918.
Shipping fair.
LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Rooms 203, P. O. Box 214. Phone Main 2233.

San Pedro Agency, Nov. 6th, 1918.
No meeting. Shipping fair; very few men ashore.
HARRY POTHOFF, Agent.
Sepulveda Bldg., 128½ 6th St. Phone Home 115; Sunset 66 W.

DIED.

Hilding Andersson, No. 1721, a native of Sweden, age 27. Died at Tacoma, Wash., Nov. 12, 1918.

Carl Johan Bengtson, No. 1924, a native of Sweden, age 38. Died at San Francisco, Cal., Nov. 12, 1918.

Charley Greenlund, No. 1258, a native of Sweden, age 27. Died at Seattle, Wash., Nov. 5, 1918.

Albert Ljungquist, No. 2137, a native of Finland, age 46. Died at Sydney, Australia, Aug. 13, 1918.

Edward Norris, No. 897, a native of Ireland, age 34. Died at San Francisco, Cal., Nov. 16, 1918.

Adolf Odenberg, No. 1428, a native of Russia, age 28. Died at San Francisco, Cal., Oct., 1918.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Republicans in the House will have a good deal to say as to the conversion of the war industries into peace industries. In the Senate the two parties are so closely balanced that two progressive Republican Senators can hold the balance of power, if it so happens that all the other members stick to party lines on the demobilization issues. In view of the likelihood that Theodore Roosevelt is to be the Republican candidate for the Presidency in 1920, it is reasonable to presume that the Republican policy will be one of trying to please both the labor movement on the one hand and the big business interests on the other. For that reason the position of organized labor in dealing with the new Congress is not quite hopeless.

Labor's position can scarcely be called fortunate, however. The defeat of Keating and Hilliard in Colorado, and of pro-labor men in scores of districts in other States, is bound to hinder the legislative program of the railroad brotherhoods, the organized metal trades, the opponents of child labor, and all the forces that are trying to build into law the day-by-day gains of the industrial battlefield. The Non-partisan League farmers in North Dakota send three men to the House to vote with labor, and they help to send another man from the Duluth district of Minnesota, where Clarence Miller, of steel trust sympathies, has been replaced by W. L. Carss, a locomotive engineer. John I. Nolan of San Francisco comes back, and Kelly of Pittsburgh, and Van Dyke of Saint Paul. Some of the new men among the Republicans are reported to be union card men who are still loyal to labor. Finally there is a change from Meyer London back to Victor Berger as the lone Socialist member. Both of them are union men, and have always made a straight labor record in Congress.

One of the first issues to be settled, when the new Congress comes together, will be the degree to which the Republicans will interfere with President Wilson's methods of putting the industries of the country upon a peace basis. The President will probably not wait for the Republicans to dictate what shall be done. He has a friendly Congress for the next four months, and he will probably get through, in that period, a measure which will permit him to make immediate arrangements for sending home a large part of the men now in training camps. That is, provided the German army is wholly surrendered or disarmed before that time, and there remains no further danger of war. The men now in France could probably be brought home within six months, but they will stay until the peace congress has completed its work. After that, a large number of them may still remain for a year or more to police certain parts of Europe and to help in the rebuilding of northern France and Belgium.

It is difficult to see how the new Congress can find a good excuse to demobilize any of the soldiers until jobs under fair industrial conditions shall have been secured for them. If there is to be any payment of out-of-work benefits for soldiers, it is only reasonable that the Government should pay them, up to the moment a civilian job is forthcoming. Acting upon that theory, some of the progressive men in the Wilson administration have been preparing a plan for this transfer of the soldiers from the military service to civilian work.

They propose that the Government, through the 1500 community labor boards, shall find out just how much employment at each trade or calling is to be had in each community. Then the Labor Department is to notify the employers that certain industrial standards must be met—standards as to hours, rates of pay, the right of the workers in industrial plants to have shop committees and to have a voice in the actual management. Unless guaranties are received that these standards will be accepted and enforced in a given locality, the Labor Department will advise the War Department that no men should be mobilized to accept work in that locality.

On the other hand, the Labor Department will arrange with Federal, State and municipal authorities that a big program of public work—such as roads, bridges, reclamation of waste lands, etc.—shall be undertaken, as "buffer" employment. Soldiers and sailors coming back to civilian work may choose between this public work, in which the high industrial standards will be maintained, and private employment. Thus by direct withholding of a labor supply and by the offer of work at better terms, the Government will force the stubborn employers in each locality to meet the higher standard of wages and conditions—especially the democratic voice of the workers in the management of the industries.

This high standard set for demobilized soldiers will apply, of course, to all workers in the locality where it takes effect. Thus the process of demobilizing the American armies may work a veritable revolution in industrial conditions—and a revolution for the better, despite the talk that labor must now consent to a return to the old low-wage and open-shop regime.

This plan is merely a plan, as yet. Any labor body that thinks well of it, or of any part of it, should notify the Secretary of Labor or the Secretary of War of that opinion. What is wanted is a definite plan, approved by organized labor, with which to ward off the hostile tricks of the junkers in Congress. The time is short.

In Massachusetts, the election has resulted in the success of the amendments to the State constitution, establishing the initiative and referendum for both laws and constitutional amendments. Fifteen thousand signatures on an initiative petition for a law, and 20,000 for a constitutional amendment, will henceforth be enough to place them on the ballot at a regular election.

Henry Sterling, now legislative agent of the A. F. of L., who was a leader in the fight for the initiative and referendum on behalf of the labor movement of Massachusetts, drafted and secured the State Federation's endorsement of a program of laws that are to be put up to the people of the State by petition, since the initiative and referendum have been adopted. There are seven points in this program. They call for a State insurance fund for injured workmen, to be maintained by the employers; proportional representation of all political parties, in the Legislature; not more than eight hours work per day for women, nor more than five hours for children between fourteen and eighteen years of age; a scheme of taxation on land values, incomes and inheritances to provide funds for old-age pensions, State university, and maternity and disability allowances; public ownership and operation of street railways; citizens to have the right to borrow money from the public treasury for productive and useful purposes only under equal conditions and for adequate security; "every city and town shall be under obligation to afford opportunity for employment, food, fuel, shelter, and other common necessaries of life, at reasonable cost, for its inhabitants."

This last proposal means the opening of homesteads to workers by the municipalities of the State, where vacant lands can be secured for the purpose.

* * *

The National War Board, besides facing the danger of political attack from the Republican standpatters, backed by the Democratic reactionaries, is now brought up against the problem of the woman in industry who refuses to go back home.

Out in Cleveland the street car company hired 170 women to operate cars, after a considerable labor shortage had been created. How the shortage was created is a point in dispute; the union men say the company wanted to get women to do its work at lower wages and worse conditions; the company denies it. Anyhow, the union kicked at the women's coming into the industry, and refused to admit them to the union.

A Federal mediator went to Cleveland, brought the union and company together, and ordered that the women be discharged by November 1. Then the women organized a union of their own, and appealed to the War Labor Board. They declared that they were never consulted by the mediators nor by the company or union, as to whether they were willing to go home; furthermore, they refused to go. It then appeared that the first report of the mediators had been that the women were needed to run the cars; it was only after twelve days that they changed their attitude. Anyhow, the women demand that the War Labor Board uphold its own principles, which call for the protection of the workers against discrimination.

A woman lawyer, Miss Florence Allen, of Cleveland, pleaded the women's case at the hearing before the Board yesterday. Attorney Vahey for the Amalgamated Union, argued that there was no place for women on the platform of street cars in Cleveland, and that as they took the places of men who might be hired, the women should be dismissed.

Champ Clark was speaking on patriotism. "Our boys will go through hell and high water to win the war, and there's no job too big for them to handle. I thought that the sky was the limit to their patriotism till the other day, when I was visiting a training camp. A company was at mess when I came along, and I was just in time to hear one of the boys land on the company cook: 'If you'd keep the cover on that kettle there would'nt be so much dirt in the soup.' 'Shut up,' retorted the cook; 'your job is not to criticize, but the fight for your country.' 'Sure,' snapped the recruit, 'but not to eat it.'"

ORATORY IN THE SENATE.

The carping critics who for years have been criticising the United States Senate and advocating the abolishment of that body are now due to apologize to the members of the upper House and to the public. The Senate has on two or three occasions furnished public information of a valuable character. Quite recently information was furnished to readers of the Congressional Record that should guarantee the Senate a lease of life for another hundred years. The knowledge which was conveyed to an anxious public is the cause of the excessive price of cow feed. But let the reader see for himself. We quote from the Congressional Record:

"Mr. Sutherland: I wish to ask the Senator whether he has noticed that in addition to these substitutes, some of which are entirely palatable, they compel the householders to buy a large quantity of bran with the flour they have been eatnig, thereby raising the cost of cow feed to an extraordinary height and compelling human beings to eat it?

"Mr. Sherman: Yes, sir; I have noticed that. In fact, I have been a devotee of bran diet for several years myself, not with a desire to injure the cow, however. I take the ordinary flour, and in order to get back what ought never to have been taken out, according to my standard of living, I buy bran and eat them both. I have to buy them separately. I can not mix them, but the result is the same.

"What the Senator from West Virginia refers to as compelling purchasers to buy bran is true. It is making stock food higher."

If the reader is still not fully convinced of the superior knowledge and ability of the members of the Senate he should read the following dialogue which took place on the floor of the Senate the same day the cause of the high cost of living for the cow was discovered. Again we quote from the Congressional Record:

"Mr. Nelson: Speaking about the cultivation of the appetite, there is a kind of a cheese they call Brick cheese. The Senator has probably heard about it. That was introduced and the taste for it was cultivated over the lager-beer counter. Could not something of the kind be done with cottage cheese?

"Mr. Sherman: If we had something to act as a stimulus it is possible.

"Mr. Penrose: How can that happen if we get national prohibition?

"Mr. Sherman: Of course, that presents an appalling possibility.

"Mr. Penrose: It shows that prohibition is a menace to cottage cheese.

"Mr. Sherman: It is also a menace to the pretzel, but really the only thing offensive in the pretzel is its shape, like some human beings. It is really a nourishing product. People could very well exchange their cereal food and put pretzels on the table if you would only change the form. They are unpopular now because of the nature of our public enemy. Along with sauerkraut it has become almost a prohibitive article. Anybody who would say a good word for either might possibly be given a trip on a rail."

Anyone who considers these discussions trival had better keep his thoughts to himself or he will expose his ignorance of the weightier matters which occupy the time and attention of the United States Senate. The fact that such discussions are entirely over the heads of most of the working people is only proof that we should continue to elect a lot of erudite lawyers and business men to go down to Washington and make laws for us and find out what makes cow feed so high.

DANGERS OF A WORLD AT PEACE.

"Peace hath her victories no less renowned than war," sang the poet. But peace has also her dangers.

What will be done with the millions of returned soldiers? What will happen when there is a radical lowering of wages? Will the women submit meekly to being thrown out of their jobs in order to make places for men?

With work plentiful and wages higher than ever before in the history of the country there are strikes and threats of strikes. The Bridgeport strikers defied all the authorities of the Government and finally forced the President to command them to return to work. All this, mind you, with the spirit of patriotism abroad in the land.

But when the war ends, when unselfishness may give way before the onslaught of selfishness, when the old dog-eat-dog ethics are even partially exhumed from the garbage heap of discarded things, will there be sufficient industrial peace for us to enjoy the declaration of peace between nations?

Is it any wonder that men of affairs are working night and day to make plans which will help to lessen the evils that will follow upon the ending of the war?

Our hope is that the big men and women who are now serving the Nation as servants of the National Government will remain at their posts during the reconstruction period, and that they will not think they have finished their work as national officials until the light breaks through the black clouds that will hang low over the world of industry when the troops return and the patriotic celebrations and thanksgivings are over.—Boston Traveler.

"IN THE NAME OF FRATERNITY."

Sonia Lerch, the well-known German Socialist, committed suicide last April in her cell in a Munich prison, to which she had been consigned pending her trial for high treason. She left behind her a letter in which she explained that she had been driven to her last desperate act through the horror and disappointment generated by the Bolshevist fiasco. The Russian revolution, she explained, had filled her with joy. When Lenine achieved the chief power her happiness had known no bounds. But then had come (says the "Christian Science Monitor") the administration of Lenine and Trotzky, aiming blow after blow at "every principle of democracy." She had seen assassination flaunted in the name of liberty; political proscription in the name of equality; a reign of terror in the name of fraternity; and finally the betrayal of Russia and the Allies to Germany, Austria, and Turkey. In short, she had seen revolutionary Socialism become a traitor to humanity, and establish itself as the henchman of the imperialism of the Central Powers. It was too much to endure. She preferred death.

POINTERS ON CO-OPERATION.

The United Mine Workers' Journal urges that in the formation of co-operative stores by labor organizations certain policies be kept carefully in mind—for example, the establishment and maintenance of a limited interest rate on any capital invested in the venture, and a "one man, one vote" principle as applied to matters affecting the membership, regardless of the number of shares of stock a member may own.

No goods should be sold on credit, the article suggests, and no goods should be sold below market price. Reserve and educational funds should be established and returns should be based on the amount of purchases. Membership should be open to all, without distinction of race, religion, or color.

A staff and suitable equipment are, of course, requisites for the operation of the store, and best conditions of labor should prevail. Committees on education and recreation should form libraries and found reading rooms, it is suggested.

About the only argument (?) left the non-unionist is that of the fox who had lost his brush, to-wit, that brushes are altogether too common.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

ditions in relation to adult education, we have not ignored economic considerations, but we have taken our stand on moral grounds. We do not think, however, that there is of necessity a fundamental antagonism between ethics and economics. Adequate pay, reasonable hours of labor, the supersession of heavy, degrading and monotonous forms of manual labor by machinery and improved processes, the provision of holidays, the introduction of human relations and of the social motive into industry, healthy homes and a cheerful environment—these are the indispensable conditions of economic efficiency; they are also amongst the elementary rights to which the citizen as such, and in virtue of his responsibilities, is entitled."

Internationalized Democracy.

"If business can be internationalized, why not democracy?" asks Frank Morrison, secretary A. F. of L., in a defense of the theory of a unity of nations, written at the request of the League to Enforce Peace, New York City.

Opponents of a league of this character, said the trade unionist, want only one kind of internationalism—buying the natural resources of weaker peoples and then have armed forces back up their investment.

"After this war," he writes, "the nations of the earth will either join a League to Enforce Peace or they will revert to the old system of secret diplomacy, huge armaments and an atmosphere charged with rumors of war. In the latter event the ideal that spurred America to war against German autocracy will have proven a delusion.

"An argument against a league of nations is that it could be used to oppress small nations and also workers who, in their organized capacity, would assume responsibilities in the conduct of affairs in their respective countries to which they are entitled. Another argument against the league is that it would develop an international ideal injurious to the spirit of Americanism.

"To the first charge I agree. A League to Enforce Peace could be used to perpetuate wrong. But this possibility now exists in individual nations, down to their smallest municipalities.

"A league of this character is related to the village constable, who can maintain order because he is supported by organized society. In its last analysis government rests on force and any people whose social conscience has not been developed is menaced by the thing that may be charged against the proposed league. This danger can only be removed by the diffusion of education, improved working conditions of the masses which will permit of more leisure, and an intellectual development upon which democracy rests.

"The charge against the spirit of Americanism cannot be supported. It will be noticed in this connection that opponents of a unity of nations support large corporations in their struggle for world's markets. Are we to understand that our government will be encouraged to aid this work, backed by secret diplomacy and huge armament, but that the peoples of our country must not extend their doctrine of peace, fraternity and democracy to countries that American interests would exploit?

"Buying the natural resources of weaker peoples with armed forces to back up their investment, is the only internationalism they favor.

"In short, they want business to be internationalized, but not principle.

"We must end the excuse for armed forces when a social disturbance in a small nation threatens to destroy values of exploiters. When a man invests his money in those countries he should take his chances with the people of those countries and not be permitted to embroil his fellow citizens in bloody war. This would destroy the prop upon which one form of imperialism rests.

"The proposed league contains no new element that I can see. Numbers do not affect a principle, and the plan to unite major nations in the interest of peace is but the enlargement of the idea that nations with common interests have put into effect from time immemorial.

"We have been flattered that prior to this war we held aloof from international affairs, but history does not justify this claim. To cite one instance: At the present time there is in existence a Pan-American Union. Our country is a leading figure in this combination that is based on fraternity and right relations with our neighbors south of the Rio Grande and in Central and South America. This movement is decidedly international, and while it has not received the publicity it deserves, its purposes and effectiveness are beyond question.

"The American mind is international. It is not bounded by the Atlantic, the Pacific, the Gulf and the Great Lakes. The present war testifies to the American's longing for a democratized world. His fear of autocracy has been continuous. The Monroe Doctrine is an expression of this fear.

"Signs are appearing that certain influences are preparing to forget their complete adherence to the President's war policy and will oppose his plan to create machinery that will eventually end wars and aid in the establishment of new orders. If the present world upheaval is to be the last it is necessary for every advocate of right relations between nations to stand behind the President and aid in the development of a sound public opinion favorable to a League to Enforce Peace.

"When old landmarks are being abandoned America must not be cautious. She must have a confidence in herself to launch the League to Enforce Peace and then hold this new venture to its announced course, that militarism, wars and imperialism in all forms may no longer occupy man's mind."

Heroes in Health Service.

In urging legislation favorable to the United State Public Health Service, Congressman Esch said that up to 1912 there were eight officers in the public health service—eight commissioned officers out of a total force of only 133—who contracted tuberculosis and three died. Fourteen contracted yellow fever and six died. Four contracted typhoid and two died and one had cholera.

"Is it not a fact," asked Congressman Lazaro, "that in the histories which children study in school, credit is given to General Goethals for the building of the Panama Canal, but not a word is said in those histories about the great scientists Reed, Lazarre and Carroll, who went to Cuba, the home of yellow fever, and submitted to innoculation to establish the fact that yellow fever and malaria were transmitted to inoculation to establish the fact for Dr. Gorgas to go to Panama and make a sanitary zone and make it possible for this country to build the Panama Canal?"

"Certainly," answered Congressman Foster, "there is no question but that my colleague states it correctly."

Living Costs Go Up.

Living costs continue upward, according to a report issued by the Bureau of Labor Statistics on food prices for September 15.

Comparing September, this year, with the same period last year the combined price increase for twenty-eight articles of food was 14 per cent.

The five-year period, September, 1913, to September, 1918, shows an increase of 72 per cent. Every article advanced at least 56 per cent. Bacon increased 100 per cent., pork chops, 103; potatoes, 105; flour, 106; lard, 109, and corn meal, 123.

Based on the average price for 1913 as 100, the retail price index number for all articles of food combined on September 15, 1918, was 178, as compared with 171 for August, 1918.

THE MISSISSIPPI BARGE FLEET.

(Continued from Page 7.)

and Columbia Rivers. Everyone who has ever traveled on a stern-wheel steamer knows the tremendous "flanking" power of the large balanced rudders just forward of the wheel when turned at an angle of about 45 degrees with the axis of the boat, and the wheel is revolved backward, throwing the water against the rudders. The stern of the boat, under those conditions, moves strongly sidewise and thus the boat is capable of swinging or "flanking" a heavy tow against the pressure of currents and wind. The auxiliary rudders, placed back of the wheel and directly in its strong race of water, gives the boat the same steering power when going ahead as do the balanced rudders when backing.

The fleets to be constructed under these plans will have a wider range of operating possibilities than any other river craft ever designed at home or abroad, and will operate profitably on even the minimum draft allowed. The barges will be pushed as on the rivers of the Mississippi Valley, or may be towed tandem as in Europe. They may be loaded with oil or with heavy bulk freights, or any other commodities that may be carried without protection from the weather.

The Upper Mississippi is a reach of river 675 miles long. The available depth of channel during the high water months is 7 to 9 feet. The channel is relatively stable, as the river carries but little shifting sand. The stream runs through an agricultural region of great richness, but the traffic possibilities of immediate importance arise out of the fact that at its upper end is a district entirely without coal, yet possessing the richest iron mines in the world, and two industrial cities having together considerably more than half a million people; while at its lower end is an inexhaustible field of excellent steam coal and the fourth manufacturing city of the United States.

The Upper Mississippi is thus peculiarly fortunate in the possibilities of such a "balanced" traffic as it has been demonstrated that the ore can be brought down-stream in barges loaded to capacity to St. Louis, where awaits coal in full quantities for each return trip to St. Paul.—Abstract from an article contributed to the Journal of the Engineer's Club of St. Louis, by Baxter L. Brown.

According to advices received from a gulf port at which the new concrete steamship "Faith" arrived recently from the Pacific, the maritime engineers are satisfied with the "stone" ship and believe that there will be others of the same type constructed in the future. They explain that the vessel has proved satisfactory in every respect and all that remains to be seen is what will happen in the event of a collision. As there is only one concrete steamer now floating the American flag, the engineers may have to wait for some time before their curiosity is satisfied, but according to the maritime experts here it is believed that if the vessels collided hard enough one or probably both would sink.

WHITHER ARE WE DRIFTING?

Are we headed straight for universal military training?

A lot of people seem to think so. Some of them have reached that conclusion from reading David Lawrence's widely syndicated "story" to the effect that the President had decided to come out for a mixed system of vocational and military training; others from studying the actual provisions now being made in the draft act for the military, vocational and academic training of the eighteen-year-old boys.

However, let us take a look at the situation:

In the first place, Mr. Lawrence's "story" was not, and did not profess to be, "inspired" by the White House; it was based solely upon an intelligent analysis of the plans then being worked out by the administration for the training of the 18-year-old drafted boys. First he analyzed those plans and then he made his own deductions as to the probable attitude of the administration in the future. However, while he himself was careful to indicate what was opinion and what was fact, the headline writers put him down flatly as announcing that the President had "changed."

As a matter of fact, the very week that the headline writers were converting the President to Prussianism, the President himself was telling a Yale visitor that he had not changed his position in the slightest. And it is significant, on this point, that the militarists with all their innumerable connections with the White House have not produced a single letter or other scrap of evidence of the President's alleged conversion.

But some people seem to feel that the provisions now being worked out for the training of the 18-year-old boys is somehow or other the "thin edge of the wedge." Well, they wouldn't think so if they could hear the sulphurous comments of the militarists themselves on that question. In the first place these are temporary measures and they die absolutely with the end of the war and the expiration of the draft act. If the wedge is to go any further, Congress must hit it some mighty licks! Peace-time machinery, with penalties, et cetera, must be created. What the military training people require is a definite act, passed separately from the draft act, exacting compulsory military training of every able-bodied youth of 18 for at least six months or a year; and they want that training to be military, in camp or barracks, removed from civilian influences. From their point of view, this latest scheme of the President's would be a cold-blooded cheat. Read in the Record the speeches of Senator Wadsworth of New York and others!

At the risk of mortally offending those good people who can not bear to have politics mentioned in the same breath with the President, we venture to point out certain political factors in the situation which are taken seriously in Washington:

Certain elements in the Republican party, led by Roosevelt, are determined to commit the Republican party to the endorsement of universal military training. They have had their way to a limited extent. The Republicans in New York State, in Ohio, in the State of Washington, have definitely endorsed compulsory military training. On the other hand, there is a whole lot of quiet opposition to Prussianism within the Republican party; a good many of the leaders feel that while it may be a congenial issue, it is distinctly a dangerous one. As we have pointed out in previous letters, the "model platform" adopted by the Indiana Republicans is significantly silent on the question, which shows what Chairman Hays thinks of u. m. t. as a vote-getting issue.

On the whole, however, the Republicans are drifting that way and the President is noting the drift. Now his life-long method in politics is never to let the other fellow have an issue all to himself. If the Republicans should come out for vegetarianism, Mr. Wilson would not come out crudely for roast beef rare. He would let the Republicans get themselves well identified with vegetarianism, with all that it implies, and then he would contrive to let the country know that while he believed in meat for a well-balanced diet, he must confess he was distinctly partial to peas and beans!

It was peas and beans on the "preparedness" issue; it was peas and beans on Mexico. It has been that over and over again; space doesn't permit a more extended analysis. Now, if between now and the next Presidential election, you find friends of the administration stressing the President's ability to recognize the possible benefits of a combined system of vocational and military training, don't assume, in your haste, that all is lost. You may find, on further examination, that it is merely the Republicans!

As a matter of fact, the tide seems definitely turning the other way. At the outbreak of the war, the press bureau of the American Union Against Militarism, located in the Westory building in Washington, had 200 newspapers listed as strongly opposed to the adoption of permanent universal military training and service; to-day their list has grown until it includes more than 700 daily and weekly papers. While to a superficial observer the metropolitan press still seems a unit on the question, here and there big Democratic papers—like the New York World, the Buffalo Courier and others—are beginning to oppose the Roosevelt propaganda as a definite contravention of America's whole position in the war. They are all for the war but they contend that the main object of this war is to put down the whole Prussian system of compulsory military training and service everywhere, and that that means keeping it out of America.

Indeed, there are days in Washington when one is tempted to assert that Congress was never further from the adoption of a permanent system of universal military training than it is to-day. At the recent annual meeting in Washington of one of the so-called defense leagues, a confidential report was made to the directors as to the number of members of Congress pledged to universal military training. They reported 176 members of the House and 42 members of the Senate,—a long ways from a majority. In the opinion of at least one observer, their estimates are too sanguine by a good 10 per cent. If the drift throughout the country, indicated by the increase in newspaper opposition, continues to the end of the war, the junkers will again be driven for their votes back to the Eastern seaboard. — From the American Union Against Militarism.

Labor News

Railroad brotherhood executives are asked to assist the United States Railroad Administration in recalling to the service men who have been debarred because of age limits, physical examinations and the "reference system" operated by private management of the railroads.

The sixteen hundred school children of Springfield, Masssachusetts, who cultivated war gardens this season secured returns of from $7 to $400. George LaBonte, the fifteen-year-old lad who realized a cash return of $400 from one acre of land has the highest record.

The convention of the United Garment Workers of America was held in a country hotel. Influenza made a meeting in Cleveland impossible and the delegates were conveyed in automobiles to a suburb fourteen miles away, where they disposed of important business and re-elected old officers.

The War Department states that a total of 12,966,594 men between the ages of 18 and 20 inclusive, and 32 and 45 inclusive, registered September 12 in accordance with the requirements of the act of Congress extending the age limits of the draft law. The total number registered under all drafts since the outbreak of the war is 23,456,021.

Suicides last year in 100 American cities showed a rate of 16.2 per 100,000 of population, against an average of 19.3 for the preceding years since 1902, according to Frederick L. Hoffman, an insurance statistician. He says the rate proves the relation of suicidal frequency to economic conditions, as reflected in the proportion of business failures, which was exceptionally low last year.

Waitresses in the Childs restaurants, operated throughout the United States, receive nearly half their wages in tips, according to the testimony of the manager of the company when censured by the Federal Food Board for advancing its prices 50 per cent. The company pays the waitresses $13.50 a week, and the tips bring the amount to $25 or more, according to the manager. The company will prepare a statement regarding its new prices.

The United States Emergency Fleet Corporation, it is announced, has accepted the advice of trade unionists and will drop welfare work and concentrate on building ships. The workers assured Charles Piez, manager of the corporation, that too much time was wasted. The men also object to professional ball players and prizefighters being given positions as foremen and who order skilled ship builders to "go down in the cellar," when they refer to the hold of a vessel.

Workers employed in a Jacksonville (Florida) shipyard have adopted "short-cut" methods to insure safety first. They have agreed that when one of their number drops a tool or block which might cause injury to others, he will pay $1 into a sick and accident fund. Within twenty minutes after the agreement was made a ship carpenter dropped a ten-pound oak wedge that would inflict serious injury to a man unlucky enough to be under it. The carpenter paid his assessment and declared it was the best kind of an education.

INFORMATION WANTED.

An appeal has been taken by the owners of the Bark "Portugal" from the decision of the Federal District Court in the matter of salvage award of $30,000 recently made and referred to in these columns. The determination of this appeal may be a matter of six months. Seamen who wish to get their money as soon as possible should communicate with Silas B. Axtell, Attorney, One Broadway, New York, in order that I may send them a power of attorney form to be signed, which will be required by the court before the money can be paid out. The crew, of course, are sure to get some money and they will probably get their portion of the amount awarded by the lower court. It seems quite possible that the decision of the lower court will be affirmed. 7-24-18

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City. 7-24-18

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

INFORMATION WANTED.

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City. 6-5-18

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

William O'Keefe, who has not been heard from in many years, is inquired for. His niece, Catherine Lynch, aged 12, is very anxious to locate him. Anyone knowing his whereabouts, please notify Catherine Lynch, 42 Monroe Street, New York City.

Home News

The Land Bank of the Spokane district, according to a report of D. G. O'Shea, president, has loaned $19,359,695 to 8300 farmers since April, 1917. Upwards of 21,000 applications for loans, covering $55,000,000 were received.

The Socialists have made a clean sweep in Milwaukee county, Wis., by electing the entire county ticket, including the sheriff and district attorney. Victor Berger, under indictment for a violation of the Espionage Act, was elected to Congress by 5560 plurality.

War gardens to the number of 5,285,000 were planted in 1918, according to the National War Garden Commission at Washington, and produced a crop valued at $525,000,000. In 1917 there were 3,500,000 gardens, and the crop was estimated at $350,000,000. The Commission expresses the belief that the gardening habit has come to stay.

New Orleans has formed a War Labor Board after the plan of the Taft-Walsh board, for the purpose of settling local labor troubles. The board consists of twelve members, six representing employers, three representing white labor and three representing Negro labor. The purpose is to adjust as many disputes as possible without appealing to Washington.

Senator Hoke Smith has introduced a bill in the Senate creating a Department of Education, whose head shall sit in the Cabinet. The bill, which the mover says has the unequivocal support of the National Education Association and the Association of American College Presidents, is designed to bring about a broad and efficient educational policy that will harmonize the work of the several States and the nation.

After stating that the report and rumors that he had read in the daily press had aroused in him an intense antagonism toward the Farmers' Nonpartisan League, J. C. Cook, prosecuting attorney of Dodge County, Nebraska, announced that after a thorough investigation he was convinced of the League's loyalty. He had issued a warrant for the arrest of a League organizer, and his investigation was for the purpose of gathering evidence and preparing his case. When he had concluded it he went into court and asked for the discharge of the defendant. "I find that, instead of being a hindrance to the Government, the League has been of invaluable assistance in spreading patriotic propaganda," said Mr. Cook.

Mrs. Maggie V. Smith Hathaway, of Helena, Mont., has proved that it is possible to run a 600-acre ranch without the aid of men's labor. She knows, because she has successfully conducted her "manless ranch" for six years, raising grain, cattle, and sheep. Mrs. Hathaway began life as a school-teacher. In a few years she became county superintendent. Later she married Mr. Hathaway, assistant State superintendent of schools, who owned a 320-acre ranch adjoining her own. After the death of her husband Mrs. Hathaway farmed the two ranches. It was difficult to get masculine help, so she introduced modern machinery that could be operated by women, and announced to the countryside that hereafter her place was to be called the "Manless Ranch."

BUY WAR SAVINGS STAMPS

Domestic and Naval

While making measurements of river flow in the upper Mississippi River basins and in the Hudson Bay recently the United States Geological Survey discovered that some of the rivers under investigation empty into the Arctic Ocean during certain seasons and into the Atlantic Ocean at other times.

An additional $120,000,000 for ship construction, making a total for that purpose of $3,004,000,000, has been asked of Congress by the Shipping Board. The Senate Appropriations Committee was asked to include the increase in the military deficiency bill, but rejected it in its report. The bill authorizes the President to create a Salvage Commission to Congress to recommend the disposition of Government property acquired during the war. The measure gives the Shipping Board power to acquire, construct, establish or improve any plants or land or to make loans to private persons for this purpose, with the approval of the President. Heretofore the board has had only the right to "requisition." The Shipping Board Act is also extended to give the Government control of dry docks, marine railways and piers, as well as shipyards.

Plans for extensive development of Boston harbor are announced by the State Waterways and Public Land Commission. The proposed improvements include the filling in of large shoal areas and the building of railroads into these areas, extension of the state-owned piers in the East Boston district to a length of 700 or 800 feet and equipping them with most modern facilities, deepening of channels and improvements of rivers entering the harbor. A two or four-track tunnel under the harbor to connect East Boston and South Boston also is under consideration. The Federal Government already is engaged in the construction of a $30,000,000 Army and Navy base and is taking other steps to provide storage and shipping facilities, and the Waterways Commission's plans have been made to meet the needs of the commercial interests at large.

The Nordberg Manufacturing Co., of Milwaukee, Wis., are claiming the possession of one of the largest heavy duty Diesel engine construction works in the United States. About four years ago they made arrangements with Messrs. Carels Freres, of Ghent, Belgium, for the building of the latter's type of engine in America, and originally it was their intention to manufacture them exactly as they were being made in Europe. The fact, however, that the war interfered with the free and rapid exchange of correspondence and machine parts gave them the opportunity of making a number of changes necessitated by the differences in shop practice between one firm and another. The engines they are now building on the Carels Freres license are of the vertical two-cycle type, with three, four, and five power cylinders and one scavenging cylinder. The five-cylinder engine, which develops 1250 b. h. p. at 180 r. p. m., is the largest stationary oil engine of the Diesel type built in the United States, and five examples are already in active service.

INFORMATION WANTED.

A lawsuit has been instituted in he United States District Court in New York against the owners, and on behalf of the members of the crew of the S.S. "Brazos," which salvaged the S.S. "Iroquois." The members are warned against accepting the unjust share of the salvage money offered by the company and which Attorney I. A. Robinow has refused to accept in view of the fact that a proper judicial decision may be shortly reached.

The Public
A Journal of Democracy
Poverty is A Crime!
It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was
"The Crime of Poverty"
It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.
Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.
Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."
THE PUBLIC
122 E. 37th St., New York City

INFORMATION WANTED.

Anyone knowing the whereabouts of Daniel Shean, last heard from at Cleveland, will kindly communicate with his brother, Richard Shean, 7014 Cedar Ave., Cleveland, Ohio. 11-6-18

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Anyone knowing the whereabouts of Woodley Ransome and Charles Bland, who were members of the tug "Virginian" when she was damaged by the "Navy Tug No. 4," will kindly communicate with Arthur Jones, Agent, Marine Firemen's, Oilers' and Watertenders' Union, 513 Main St., Norfolk, Va. 11-6-18

Members who were present at the time when W. Bodie met with an accident on board the S. S. "Eastern Sea," last July, are requested to communicate with the above named comrade, P. O. Box 65, Seattle, Wash. 11-6-18

News from Abroad

The Duke of Sutherland, who is reported to be selling a quarter of a million acres of his estates, is described in "Who's Who" as owner of "about 1,358,000 acres."

The holders of British Government securities numbered before the war 350,000; there are now 17,000,000. There are 400,000 local agencies that have collected $395,000,000 in sixpences and half-crowns.

The Defense Commission of New Zealand is urging the government to establish the returning soldier in civil life as quickly as possible in order to avoid the effects of idleness and lack of purpose. The Commission wants more agricultural schools established to teach soldiers who wish to go on the land.

The fact that an Indian woman, Mrs. Sarojini Naidu, presided over a recent public meeting of the Madras Provincial Conference is commented upon by "New India" as marking "the coming of a new great force into modern Indian political life—the Indian woman." It was Mrs. Naidu who at the meeting of the Bombay Provincial Conference, moved a resolution supported by 100 women of Bombay recommending the extension of the franchise to women at the same time as to men.

Of the net area of British India, according to Vice Consul Charles M. Haywood, Calcutta, which is 619,158,644 acres, exclusive of feudatory and tributary States, 229,620,075 acres are actually cropped, and of this cropped area 48,003,917 acres, or 20.9 per cent., are under irrigation. 26,026,942 acres by Government works. The figures just published by the Public Works Department of the Government of India show that about 3,000,000 acres of this area were brought under irrigation by works completed during the year 1916-17.

An order in council has been passed by the Canadian Government, subsequent to a conference between representatives of the Canadian, British and United States navies, when it was agreed that the United States should control all coast patrols, sea patrols, protection of traffic and offensive action against enemy submarines as far east as the 65th meridian (Lockeport, N. S.), including the outer part of the Bay of Fundy, providing that United States naval officers be authorized to visit and search all vessels within Canadian waters west of the 65th meridian.

The increased cost of labor and materials during the war has had the effect of producing the highest bill for the maintenance of the canals in Scotland for the past twenty years. Traffic has fallen off, particularly on the smaller systems. The larger canals, such as the Caledonian and Crinan, make a better showing, the Caledonian having a record of 2605 vessel passages (including 548 vessels on Admiralty service, for which no dues were received), compared with 2105 for the 1917 fiscal year. The ordinary receipts of this canal for the year ended April 30, 1918, were $30,000, or $250 less than in 1917; the total expenditures, $55,000, or nearly $15,000 more than in the previous year. The loss in revenue on the Crinan Canal amounted to $1500; vessel passages numbered 832, compared with 1185 for 1917.

With the Wits

Foreman—That machine can do the work of a dozen men.

Visitor—Gee whiz! My wife ought to have married it.—Boston Transcript.

"What is your favorite perfume?"

"Well," replied Mr. Cumrox, "in the evening it's mint, but in the morning it's ham and eggs."—Washington Star.

"Do you think it is right for a wife to go through her husband's pockets?"

"I don't know about its being right, but I know from my own experience that it is often unavailing."—Baltimore American.

"There doesn't seem to be so much gun play in Crimson Gulch since prohibition struck." "No," answered Broncho Bob. "The boys shoot straighter, but not so often."—Washington Star.

Bertha—What did father say when you asked him if you could marry me? Percy—He didn't really refuse, but he made a very severe condition. Bertha—What was it? Percy—He said he'd see me hanged first.—Tit-Bits.

"What are your views on this appropriation we have been discussing?" "I've contributed enough of the conversation," said Senator Sorghum. "I want to get it up to the parties who will contribute the money."—Washington Star.

"Professor Diggs likes to use high-sounding phrases." "A mere affectation, no doubt." "No. I rather think he uses such phrases because he's afraid that if people knew what he was talking about they'd know he didn't know what he was talking about."—Saturday Sunset.

"Now," said the professor, "supposing that by some convulsion of nature portions of the earth now under water became dry land, what would be the most prominent characteristic of the landscape?"

And the summer girl who was trying to suppress a yawn replied: "German submarines."—Tit-Bits.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

JUSTICE IN SAN FRANCISCO.

An Exposé of the "System" Which Frames Convictions and Acquittals.

A record of corrupt manipulation of criminal justice in San Francisco of such proportions as to stagger the imagination was made public during the week in a voluminous report submitted by J. B. Densmore, Director General of Employment, to William B. Wilson, Secretary of Labor, at Washington, D. C.

It is the more amazing in its pattern since it reveals the methods used by the San Francisco District Attorney's office to fix guilt upon the defendants in the "Preparedness Day" bomb cases, while nullifying the prosecution of persons caught red handed in violations of the law.

San Francisco's notorious District Attorney has been trapped by a dictaphone, installed in his offices in the early part of June by a force of half a dozen men working under Densmore. Limitation of space unfortunately forbids publication of the entire shameful record but the introductory as well as the conclusions of Mr. Densmore's report are submitted herewith.

San Francisco, Cal., Nov. 1, 1918.

Honorable W. B. Wilson,
Secretary of Labor,
Washington, D. C.

Sir: Pursuant to instructions received from time to time during the past six months, I have the honor to report that I have conducted a secret and altogether informal inquiry into the Mooney case, and beg leave to submit herewith the results of my investigation. Before entering into a recital of the various steps pursued in carrying out the operation, it might be well to call attention to a number of peculiar features which have characterized this case from the beginning, in order that there may be no misconception either as to the issues involved, or as to the necessity which arose for the employment, on the part of the investigators, of somewhat unusual methods of obtaining information.

On the surface, and in its narrowest aspect, the Mooney case may be defined as the case of the people of the State of California against Thomas J. Mooney and certain other defendants, four in number, charged with perpetrating a bomb outrage in the city of San Francisco during the Preparedness Day parade on July 22, 1916, thereby causing the deaths of nine or ten persons and the injury of numerous others. Of the five defendants, four have been tried. Two of these, Mooney and Warren K. Billings, were found guilty, Mooney now being under sentence of death and Billings serving a life term in the penitentiary; the other two, Mrs. Thomas J. Mooney and Israel Weinberg, were acquitted. The case against the fifth defendant, Edward D. Nolan, has virtually been dropped for lack of evidence. All five of these persons have been more or less prominently identified with the union labor movement in San Francisco.

It was charged by the prosecution that these five defendants were animated by anarchistic motives, and that the bomb explosion which they were alleged to have planned and consummated was the climax of a carefully laid plot to strike a blow at existing social and political institutions and intimidate all those who were in any way concerned with placing the country in a state of military preparedness.

This is one view of the case. On the other hand, it has been urged in favor of these defendants that they are the victims of a monstrous frameup; that the evidence against them has been manufactured out of whole cloth and cut to measure in accordance with a predetermined pattern; and that the District Attorney of the City and County of San Francisco, backed by certain sinister influences antagonistic to the cause of union labor, has resolved to accomplish their ruin if it is at all possible to do so.

This, stated briefly, is the Mooney case. The full record is voluminous. As one reads the testimony and studies the way in which the cases were conducted one is apt to wonder at many things—at the apparent failure of the District Attorney's office to conduct a real investigation at the scene of the crime; at the easy adaptability of some of the star witnesses; at the irregular methods pursued by the prosecution in identifying the various defendants; at the sorry type of men and women brought forward to prove essential matters of fact in a case of the gravest importance; at the seeming inefficiency of even a well established alibi; at the sangfroid with which the prosecution occasionally discarded an untenable theory to adopt another not quite so preposterous; at the refusal of the public prosecutor to call as witnesses people who actually saw the falling of the bomb; in short, at the general flimsiness and improbability of the testimony adduced, together with a total absence of anything that looks like a genuine effort to arrive at the facts in the case.

These things, as one reads and studies the complete record, are calculated to cause in the minds of even the most blasé a decided mental rebellion. The plain truth is, there is nothing about the cases to produce a feeling of confidence that the dignity and majesty of the law have been upheld. There is nowhere anything even remotely resembling consistency, the effect being that of patchwork, of incongruous makeshift, of clumsy and often desperate expediency.

It is not the purpose of this report to enter into a detailed analysis of the evidence presented in these cases—evidence which, in its general outlines at least, is already familiar to you in your capacity as president, ex officio, of the Mediation Commission. It will be enough to remind you that Billings was tried first; that in September, 1916, he was found guilty, owing largely to the testimony of Estelle Smith, John McDonald, Mellie and Sadie Edeau and Louis Rominger, all of whom have long since been thoroughly discredited; that when Mooney was placed on trial, in January of the year following, the prosecution decided, for reasons which were obvious, not to use Rominger or Estelle Smith, but to add to the list of witnesses a certain Frank C. Oxman, whose testimony, corroborative of the testimony of the two Edeau women, formed the strongest link in the chain of evidence against the defendant; that on the strength of this testimony Mooney was found guilty; that on February 24, 1917, he was sentenced to death; and that subsequently, to wit, in April of the same year, it was demonstrated beyond the shadow of a doubt that Oxman, the prosecution's star witness, had attempted to suborn perjury and had thus in effect destroyed his own credibility.

The exposure of Oxman's perfidy, involving as it did the District Attorney's office, seemed at first to promise that Mooney would be granted a new trial. The District Attorney himself, Mr. Charles M. Fickert, when confronted with the facts, acknowledged in the presence of reputable witnesses that he would agree to a new trial. His principal assistant, Mr. Edward A. Cunha, made a virtual confession of guilty knowledge of the facts relating to Oxman, and promised in a spirit of contrition to see that justice should be done the man who had been convicted through Oxman's testimony. The trial judge, Hon. Franklin A. Griffin, one of the first to recognize the terrible significance of the exposé, and keenly jealous of his own honor, lost no time in officially suggesting the propriety of a new trial. The Attorney General of the State, Hon. Ulysses S. Webb, urged similar action in a request filed with the Supreme Court of California.

Matters thus seemed in a fair way to be rectified when two things occurred to upset the hopes of the defense. The first was a sudden change of front on the part of Fickert, who now denied that he had ever agreed to a new trial, and whose efforts henceforth were devoted to a clumsy attempt to whitewash Oxman and justify his own motives and conduct throughout; the second was a decision of the Supreme Court to the effect that it could not go outside the record in the case—in other words, that judgment could not be set aside merely for the reason that it was predicated upon perjured testimony.

There are excellent grounds for believing that Fickert's sudden change of attitude was prompted by emissaries from some of the local corporate interests most bitterly opposed to union labor. It was charged by the Mooney defendants, with considerable plausibility, that Fickert was the creature and tool of these powerful interests and the principal public service utilities of the city of San Francisco. In this connection it is of the utmost significance that Fickert should have entrusted the major portion of the investigating work necessary in these cases to Martin Swanson, a corporation detective, who for some time prior to the bomb explosion had been vainly attempting to connect these same defendants with other crimes of violence.

Since the Oxman exposure the District Attorney's case has melted steadily away until there

is little left but an unsavory record of manipulation and perjury, further revelations having impeached the credibility of practically all the principal witnesses for the prosecution. And if any addtional confirmation were needed of the inherent weakness of the cases against these co-defendants, the acquittal of Mrs. Mooney on July 29, 1917, and of Israel Weinberg on the 27th of the following October, would seem to supply it.

These acquittals were followed by the investigation of the Mediation Commission and its report to the President under date of January 16, 1918. The commission's report, while disregarding entirely the question of the guilt or innocence of the accused, nevertheless found in the attendant circumstances sufficient grounds for uneasiness and doubt as to whether the two men convicted had received fair and impartial trials.

This was the condition of things when I asked for and received official permission to make a further investigation of the case along certain lines which I hoped would develop information of the first importance. By this time the fate of the Mooney defendants had aroused international interest and solicitude. The Netherlands Federation of Labor, the British Trades Union Congress, the General Federation of Labor of Milan, and other similar organizations all over the world, had taken official cognizance of the methods used in securing the conviction of Billings and Mooney, and had entered their solemn protests against what they considered a gigantic frame-up on the part of unscrupulous capitalistic interests to discredit the whole cause of union labor. The liberal sentiment of Russia was aroused because the circumstances of Mooney's prosecution, in the language of the Mediation Commission, "led to the belief that the terrible and sacred instruments of criminal justice were consciously or unconsciously made use of against labor by its enemies in an industrial conflict."

This widespread feeling of suspicion on the part of organized labor throughout the world has, in time of war, a deep and peculiar significance, in order to understand which it is only necessary to point out that under the authority conferred by various legislative measures passed by Congress since the beginning of the war, supplemented by numerous proclamations of the Chief Executive, the Government itself has become the direct employer of millions of men, while the country's principal economic activities have been subordinated to the public interest in every line of endeavor connected in any way with the war. Never before in the history of the country has this partnership of Government and Industry been so close, or so necessary. With every resource of the country engaged in the one supreme effort; with co-operation among laborers, and between labor and capital, the keynote of success; and with the Government engaged in working out a labor program designed to promote the efficiency and morale of the vast army of artisans and laborers who are supplying the sinews of war, it is of the utmost importance that mutual respect should characterize the relations of all the parties concerned—that co-operation between capital and labor should be a reality, and not a mere dream; that distrust and suspicion should have no place in their councils; and that in peace and harmony they should strive wholeheartedly for the one common aim—the winning of the war.

In my investigation of the Mooney case I have kept these facts well in mind and proceeded on the theory that an unwarranted attack upon labor leaders, with a premeditated and deliberate intention to injure and discredit union labor generally, and thus in effect to curtail the production of essential war materials, would constitute a virtual violation of the act of Congress approved May 16, 1918, commonly known as the Espionage Act, which makes it a crime punishable by fine and imprisonment to "utter, print, write or publish any language intended to promote the cause of its (the country's) enemies * * * or advocate any curtailment of production in this country of any thing or things, product or products, necessary or essential to the prosecution of the war." This was not an idle resolution of Congress, but was a serious attempt on the part of the national legislative body to reduce to a minimum the handicap of sedition, perfidy, and the various crimes growing out of a lukewarm or misguided allegiance.

Applying these thoughts to the Mooney case, it will at once be seen that the issues involved transcend in importance the issues of the particular crime and assume proportions that appeal to the imagination. If there has been persecution, along with deliberate falsification of testimony in furtherance thereof, the frame-up becomes a monstrous offense, not only against common decency, but against the flag.

* * *

At this point Mr. Densmore relates some details of the difficult task which he and his assistants had in installing the microphone in Fickert's office.

A transcript of the more important parts in the microphone record, covering several pages of a standard newspaper size, is then submitted in Densmore's report. The San Francisco Call of November 22 had a full account of this record. Other San Francisco dailies printed only a summary of the startling news.

This record shows Fickert and others of his force in illicit and unscrupulous bargains with the McDonough brothers, notorious bail bond brokers, for the fixing of cases and the release of persons brought to the bar of justice for criminal excesses.

Benny Selig, butcher, collector of campaign funds for Fickert and dispenser of sweetbreads and pork tenderloins to Fickert, the McDonoughs and others of his political patrons, flits in and out of some of the pages as he conspires with the McDonoughs and Fickert to bring about a dismissal of an auto tire thief.

How Fickert, the McDonoughs, Benny Selig and others sought to prevent the indictment of Koenig, one of the defendants in the Baker street vice cases, and finally how his release was effected in the courts, is another illuminating chapter of the report.

But the most astounding of all revelations is the chapter embodied against Judge F. W. Henshaw, former Justice of the California Supreme Court, as part of a confession by William J. Dingee, that a bribe amounting to $410,000 was paid to Henshaw, then a member of the court, in part by Dingee and Frank J. Moffit, the latter now dead, for Henshaw's vote in the famous Fair will case.

Henshaw is singled out in the report, first, because of what he has always represented in the State judiciary; and secondly, because with Attorney Frank Drew, attorney for the malodorous Chamber of Commerce "law and order" committee, he has been Fickert's chief of counsel in the "bomb" cases. He is the man who discovered Fickert as the one best fitted to dismiss the cases pending against Patrick Calhoun and other defendants in the San Francisco graft prosecution.

The Dingee allegations against Henshaw are backed up by documents which sustain in every way the bribery in the Fair case. In league with Henshaw and Drew, representing those corporate interests opposed to labor here and elsewhere; and Martin Swanson, detective of the Pacific Gas and Electric Company and United Railroads, who gathered, or assisted in gathering, the bulk of the testimony used against the "Preparedness Day" defendants. Fickert is unmasked by the report as a mere automaton in the hands of more sinister masters.

Nor are all of the open plots of Fickert with the evil forces of the city incorporated in the report of Densmore to Secretary Wilson. Only such dialogue is published as will serve to show the background of the San Francisco District Attorney's office; what has actually inspired the introduction of perjured testimony in both the Billings and Mooney cases—the framework of miserable falschood and hate—that served effectually in the first two trials, but which came crashing down in those of Weinberg and Mrs. Mooney.

The overwhelming proof of Fickert's guilty knowledge of steps taken to produce a witness who will supplant the notorious Frank C. Oxman, in another trial of Mrs. Mooney, is supplied by his own conversations with those who promised to produce one.

"I don't care how you get this witness down to Steuart and Market streets, if you have to bring her down in a balloon," Edward Cunha, assistant to Fickert, says in effect.

Then Fickert proceeds to "make" a witness who will meet just such an emergency.

But the whole detail of the report abounds in so much that is sensational, so much that makes for a clearer understanding of the prejudice built up against the cause of labor—things that are impossible where fact and logic and fair dealing is concerned—that any synopsis can give but a faint idea of its contents.

Mr. Densmore's meaningful conclusions are reprinted herewith, in full:

* * *

For the purposes of this report no further transcript of these dictaphone conversations is deemed necessary. It can readily be understood that merely to pile up a multiplicity of incidents of the same general character would be a work of supererogation, lending increased bulk to an already long report without adding either to its strength or its lucidity. In other words, it is not the object of the present investigation to see how many instances of frameup can be laid to the account of the District Attorney; what is important is the nature and quality, rather than the mere amount of evidence adduced and for this reason one authenticated case will serve as well as a hundred.

The record establishes three sets of facts, each one of which has a bearing upon the question at issue, namely, whether Mooney and his fellow defendants received fair trials at the hands of the District Attorney. These three sets of facts are:

First—That Fickert is in constant association with men and interests of such a nature as to render it incredible that he should be either impartial or honest in the conduct of a case of this nature; that he is and has been for some time past co-operating with notorious jury and case fixers; that, for instance, he is equally guilty with Pete McDonough in conspiring to free a wealthy man charged with crimes of degeneracy; and that he has also been working with the same notoriously corrupt McDonough and Ben Selig to save from conviction Dave Blaine, an automobile tire thief. These cases are mentioned simply to illustrate his common practice, of which abundant evidence is furnished by this report.

Second—That Fickert and his associates have within the past month framed, and conspired to frame, cases with which it was his sworn duty to deal impartially.

Third—That Fickert and his associates, within the past month, have conspired to fabricate evidence with which to convict Mrs. Mooney; and to this end they have attempted, in the grossest manner, to intimidate and blackmail a prospective woman witness.

It will be apparent that these facts, which are all brought out exhaustively in the present report, tend to supplement the revelations already made in the Oxman letters, and that they confirm the impression, made unavoidably by the weak and conflicting nature of the testimony in the bomb cases, that practically the whole of Fickert's case against Mooney, Billings and Mrs. Mooney was made to order.

Let us, in conclusion, touch once more on the general outlines of the "evidence."

Billings, it will be remembered, was convicted on testimony that he had been seen to emerge with a companion from a saloon at the scene of the explosion, put down a suitcase, and walk away through the crowd.

Mooney was convicted on testimony that he had been seen to drive an automobile to the scene of the explosion in company with Billings, Mrs. Mooney and Israel Weinberg, and that he had afterwards driven away in the same vehicle. Other testimony required the entire party to be near Third and Market streets within a few minutes of the explosion, and then to reach Steuart and Market (nearly a mile away) without attracting the attention of the traffic police at a time when the streets were cleared for the Preparedness Day Parade. Photographs and testimony introduced by the defense showed that Mr. and Mrs. Mooney were on the roof of the Eilers building, a mile from the scene of the explosion, at the moment that they were represented by the prosecution as being in Weinberg's automobile in lower Market street.

Two witnesses, Mrs. Mellie Edeau and her daughter, who testified in two of the trals, altered their testimony between the two, and were shown, by the police records, to have been at first unable to identify either Billings or Mooney.

It was the theory of the prosecution that the defendants had at first intended to throw the bomb from the roof of a building at 721 Market street; that they changed their minds when it became apparent that the United Railroads division would not pass before the bomb was due to explode; that they had then proceeded down Market street to Steuart, where they deposited the bomb (concealed in a suitcase) and fled. This whole theory was not only inherently inconsistent in its several parts, but was discredited by the exposure of every important witness, chief among them being Oxman and the Edeaus.

The methods used by Fickert in framing up the cases were revealed by the publication of the Oxman letters, by the admissions of the Edeaus, and by the exposed attempt to intimidate Estelle Smith, the dental nurse who was induced to testify to the fictitious happenings at 721 Market street. These methods were identical with the ones still in use, as shown in detail in other parts of this report. So thoroughly were they understood by court, jury and prosecutor that in the trials of Mrs. Mooney and Israel Weinberg, Oxman was not introduced and swift acquittals resulted. In other words, the testimony which before the Oxman exposure convinced two juries that Mooney, Mrs. Mooney, Billings, and Weinberg were in an automobile at the scene of the crime was too weak, after the exposure, to convince anybody that either Mrs. Mooney or Weinberg were in the automobile or had a part in the crime.

Thus the cases against these defendants had already fallen to pieces before the present investigation began. It only remained to demonstrate that the weakness and dishonesty of the prosecution's testimony was not an accident, but was the result of a consistent policy of conspiracy and corruption. Fickert is seen throughout this report to be prostituting his office in other cases precisely as he prostituted it in the bomb cases, and if there was previously any doubt as to whether a prisoner whom powerful interests desired to convict would receive a fair trial at the hands of Fickert there is now no doubt about the matter whatever. The San Francisco District Attorney's office, thrown wide open by this investigation, reveals the public prosecutor, not as an officer of justice, but as a conspirator against justice. Fickert is shown setting the guilty free and prosecuting the innocent.

Fickert's desperate daily attempts to bolster up a cause which cannot for a moment stand an unprejudiced examination; his affinity for a man who is both a discredited judge and an unblushing representative of dishonest interests; his constant association with, and dependence upon, a corrupt corporation detective; his passionate personal hatred of the various defendants, and his determination to ruin them, despite the fact that he, better than anyone else, knows that they are innocent; his openly expressed contempt, in the midst of a great war, for the President of the United States; his total dis-

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

President is Against "Cleaning Up" Europe

The noisy and influential element in this country that urged an invasion of Mexico, two years ago, to "clean up and establish law and order," will be again confronted by the same White House opposition if they favor this course in Germany.

In an address to Congress, in which he stated the armistice terms, President Wilson gave notice that he did not favor mixing in the internal affairs of the Teuton nation, now in the throes of revolution. He expressed the hope that these peoples would "choose the way of self-control and peaceful accommodation."

"If they do," he said, "we will put our aid at their disposal in every way that we can. If they do not, we must await with patience and sympathy the awakening and recovery that will assuredly come at last.

"The humane temper and intention of the victorious Governments has already been manifested in a very practical way. Their representatives in the supreme war council at Versailles have by unanimous resolution assured the peoples of the central empires that everything that is possible in the circumstances will be done to supply them with food and relieve the distressing want that is in so many places threatening their very lives; and steps are to be taken immediately to organize these efforts at relief in the same systematic manner that they were organized in the case of Belgium. By the use of the idle tonnage of the central empires it ought presently to be possible to lift the fear of utter misery from their oppressed populations and set their minds and energies free for the great and hazardous tasks of political reconstruction which now face them on every hand. Hunger does not breed reform; it breeds madness and all the ugly distempers that make an ordered life impossible."

Compensation Laws Are of Recent Date.

The first permanent State compensation laws were enacted by Washington and Kansas on March 14, 1911, says the United States Bureau of Labor Statistics in Bulletin No. 230, which is a complete history and exhaustive explanation of the various theories of workmen's compensation now in operation in this country.

Washington and Kansas were the first to pass permanent legislation of this character, but the Wisconsin law was the first to become offective, May 3, 1911, the date of its passage. Since then 37 States and three Territories have passed these laws while the Federal law has been amended to include all civil employes.

Prior to 1911 several States had enacted workmen's compensation laws, which were declared unconstitutional. The first legislation in the United States providing for stated benefits payable without suit or proof of negligence was the co-operative law of Maryland, which applied to mining, quarrying, railways and municipal construction work. This law was held to deprive parties of the right of trial by jury.

No two compensation laws are alike. A number of provisions have been adopted quite uniformly by nearly all the States, and those of certain States have been taken as models by others.

In only two States (Hawaii and New Jersey) is agriculture included, and domestic service is exempted in all but one State (New Jersey).

The reason for the almost universal exclusion of agriculture in the United States, the bulletin says, can hardly lie in the fact of its non-hazardous character. European experience, combined with available accident statistics in this country, proves quite conclusively that agriculture is a highly hazardous employment. The belief is expressed that the opposition of the farming element explains the exclusion in 38 States of agricultural laborers from the benefits of compensation acts.

It is stated that probably no phase of workmen's compensation has created more ill feeling than the question of free choice of physicians. In presenting the worker's side of the question the bulletin says the injured man has most at stake.

"It is he, and not the employer, or physician, who suffers; it is his life that hangs in the balance. A man desires a doctor whom he knows, with whom he can freely and unreservedly discuss his ailment, and in whom he has confidence.

"The theory that it is cheaper for the employer to furnish unlimited medical and hospital service on the ground that it reduces compensation costs by an early restoration of earning power has not been universally accepted by employers and insurers. Only four of the 40 States provide for unlimited medical service."

Readjustment Plans to Be Applied Slowly.

Chairman Baruch of the War Industries Board has authorized the statement that the end of the war will not result in immediate cancellation of war supply contracts, but that contracts will be cancelled gradually as requirements are reduced, making it possible to lift curtailments and restrictions upon ordinary industrial activities. He said:

"As the demand for raw materials is lessened by the reduction of war requirements and the cancellation of war contracts if, and when such cancellations be made, the raw materials so made available will be released and allocated by the War Industries Board, for use in supplying civilian and export demands which through curtailment have been held in check during the war. In addition to the ordinary commercial requirements, there will be a heavy flow of materials thus released to supply the demand for the great reconstructional work required by the European countries.

"At the same time there is to be a gradual lifting of the restrictions and curtailments that have been imposed upon industry by the exigency of the war so as to allow as promptly as possible free flow of all supplies into peace channels.

"The War Industries Board will continue to exercise its functions until the peace treaty is signed to the end that the readjustment of the matters on which it

World's Workers

In the eleven child-welfare centers in Manchester, England, there are schools for mothers at which they receive instruction and advice from experts. These schools appear to be much appreciated by the mothers who attend.

The Miners' Federation of Great Britain is about to introduce an innovation. Its president and secretary will be elected permanently, instead of annually, and subject to the recall. The organization is now composed of nearly 800,000 members.

Newspaper reports from England carry the information that in the first parliamentary by-election under the new register, held at Booth, near Liverpool, a labor party victory of 1064 over the conservative candidate was recorded. The Liberals, who formerly held the seat, did not contest it.

At a recent meeting of the Mexican National Agrarian Commission a plan was formulated for submission to the Ministerial Council and Congress creating an agrarian indebtedness of $50,000,000, which the Federal Government proposes to use for acquiring large areas of agricultural land to be divided and sold to small farmers upon the express stipulation that they shall devote the tracts to intensive cultivation.

It looks as though Bulgaria surrendered just in the nick of time. According to Consul General Murphy, who is in Sofia, the workmen and soldiers in that city were engaged in a continuous discussion of Bolshevikism and "anarchy" was making tremendous progress just before Czar Ferdinand abdicated and scooted for Vienna or Berlin. Murphy says it became a matter of daily routine for the workmen and soldiers to assemble in front of the Czar's palace and pass laws that they intend to enforce. Whether or not a crimp will now be put in the ambitious plans of the Bulgarian anti-imperialistic agitators is not known, but in all probability if the Allies go through with the self-determination principle the people, who forced the surrender of the militarists, will be heard from some more. In fact, a revolution is said to be raging in some sections of Bulgaria at present.

The electoral program of the Irish Labor party adopts "the principles of the Russian revolution, supported as they are by the pronouncements of President Wilson and the premiers and politicians of all the warring and neutral powers, namely, 'the right of all peoples to self-determination'," and interprets those principles as meaning "that Ireland, no less than Belgium or Serbia, Poland or Finland, Bohemia or Esthonia, and these no less than Ireland, shall have the right to decide its own form of government, to choose its own sovereignty, to determine its own destinies without limitations, except such as are voluntarily conceded or are common to all nations." In view of the continuance of coercion and the threat of conscription, to the latter of which the party is firmly opposed, "the National Executive has decided by a unanimous vote that the members of the Irish Labor party shall refuse to attend the House of Commons." In case circumstances shall arise which dictate a change of policy in this respect, the change is to be determined by a special national congress.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Pacific Coast Marine.

The schooner "Camano" was posted as overdue on Nov. 20. The "Camano" sailed from Port Ludlow for Port Elizabeth 198 days ago, far beyond the normal time for this voyage.

Influenza is taking a heavy toll of the natives of Kodiak island, off the southern coast of Alaska, according to reports brought from the North. The island's sole physician is said to have left to join the Army Medical Corps.

Partly dismantled and with rudder damaged, the bark "W. B. Flint" has arrived on Puget Sound in tow of the tug "Hercules." The bark got into difficulty at Unalaska and most of the crew went to Seattle on the Admiral steamship "Admiral Watson." The captain and a few of the crew remained on the vessel.

The Emergency Fleet steamer "Mahanna," the sixteenth craft built at the McEachern yards at Astoria, was successfully launched on Nov. 20. The "Mahanna" is of the Hoagh type, 3500 tons and will be equipped with twin engines. She is about 95 per cent. completed and will have her engines installed at the Astoria Marine Iron Works.

With the placing of the operating agency for fifty French wooden ships building in British Columbia in the hands of a Seattle firm, that city became the operating headquarters of a fleet of ninety-two French wooden carriers. All will be North Pacific products. Thirty-five of the number have already been chartered and dispatched on voyages.

The Mexican Government is said to have approved a contract with a Japanese company to operate a line of eight steamships between Mexican ports and Yokohama. Among the conditions is the requirement that Mexicans selected by the Government shall be given practical instruction in navigation on the steamers of the line.

With the authorization of $250,000 for its dredging program, the port of Portland has outlined activities that will make the harbor capable of caring for any ships that may dock there. Dredging will be carried as close to the wharves as the property owners wish, the fifty-foot deadline heretofore established being abolished.

Diver Abrahamsen has just returned to San Francisco from Tampico, where he has succeeded in raising the steamers "Lucatan" and "Coneta," which have reposed in the mud of the harbor bottom for four and nine years respectively. An effort was made by another diver to raise the steamers some time ago, but the result was a failure. The craft belong to the Walter Page Oil Refining Company.

After being withdrawn from the Vancouver-Oriental service for three months by the Canadian Government, the Canadian Pacific liner "Empress of Japan" has been ordered returned to the regular run and will sail from Vancouver for Nagasaki and Hongkong November 27. This is taken as an indication that all of the Canadian vessels that were withdrawn will be restored to the service as soon as they can be spared from the war and military needs.

British Columbia shipbuilding concerns have been awarded Dominion Government contracts for the construction of ten steel ships, of which eight are to be built in Vancouver, at a valuation of $16,000,000. Coughlin & Sons, Vancouver, will build four ships of 10,000 tons; Wallaces, whose yards are in North Vancouver, are to construct the same number of 8100-ton ships, while the Victoria Machinery Depot will build two boats of the latter class.

The San Francisco Chamber of Commerce is undertaking to improve conditions at that port resulting from export and import restrictions during the war. Cooperation in this project is being sought from all shippers and importers. Specific cases have been requested of actual injuries resulting from these limitations. Concessions are to be asked for, such as the assignment of ships now being built on the Pacific Coast to the Pacific trade instead of elsewhere, advance notice of available tonnage two and four months in advance, and the installation of a private wire from San Francisco to the main offices of the War Board in Washington.

Final steps toward the removal of censorship restrictions on publication of movements of commercial shipping were taken by the Navy Department during the past week. Port authorities were notified that ship news reporters might hereafter board incoming vessels. The Treasury Department was advised that collectors of the port may release news of shipping without restriction. The Navy itself will continue on a war footing until surrender of German war craft is complete. Only movements of war vessels, transports and supply vessels directly under naval jurisdiction need be withheld from publication.

General Manager A. F. Haines of the Pacific Steamship Company, has returned from a tour of the East. Haines predicts that the importing and exporting business of San Francisco and the entire Pacific Coast will be enormously increased as the result of the war. Haines' company has perfected an organization in the Orient and will extend its operations to the offshore trade. "Before the war," said Haines, "the American people had neither the ships or inclination to go after foreign trade, but now it is different. We have now or will have soon something like 3000 ships of our own and as the result of shipbuilding propaganda spread broadcast since the beginning of the war we have also the inclination to go after this trade."

A new chapter in the long list of sea thrills and adventures that have surrounded the schooner "Casco" since Robert Louis Stevenson chartered the tiny craft to cruise the South Seas thirty years ago was finished during the past week, when the vessel came into San Francisco with all hands manning the pumps to keep the flush hull from sinking. The adventure ship came from Suva, and for the last forty-four days of the voyage Captain Percy E. Troup and his crew of five, including the cook and the bride of the skipper, had never left the pumps for a moment. The water had poured into the vessel so fast that the relinquishment of pumping for a single hour would have resulted in the sinking of the old craft. The "Casco" is now owned by H. O. Wicks of Seattle. She may go north next season for seals, but Troup will not be commander, for his bride says she has had quite enough of the Stevenson ship.

A number of the wooden ships now building and nearing completion on the Pacific Coast may be installed with the Bolinder or other type of internal combustion engine, is reported in advices received from Washington. According to a number of shipping men who have returned from the East recently, the Shipping Board has decided that in place of the steam engines which have been withdrawn for use on the wooden ships it will be advisable to experiment with the internal combustion engines of the Diesel or near-Diesel type. The experiments made on this coast with the Bolinder have proved so satisfactory, it is reported, that this has led the Government men to the conclusion that they may well be tried out on the big wooden ships. The Bolinder is made in units of 160 to 500 horse-power each, and if these are placed in units of two on a vessel it will be possible to give a large vessel 1000 horse-power with twin screws. It is possible that more than one type of engine may be experimented with, it is said. Certain experienced navigators of the old school, who sailed sailing and steam vessels many years ago, are of the opinion that if the single unit of steam propelling one screw is replaced by a twin outfit there will be less vibration and the wooden construction will stand up better and there will be less leaks.

The historic old steamer "Breakwater," which ran ashore on the coast of Mexico about thirty miles north of Puerto on October 7, is a complete wreck, according to advices received by Thomas Crowley of San Francisco. The telegram says that a northerly gale has broken the craft into bits; that while the crew was making a landing the third officer was drowned, but that Captain J. A. Wayland and the rest of the men are safe. With the exception of the commander, the crew was shipped from New Orleans. The "Breakwater" ran ashore while steaming from New Orleans for Puerto and went so high and dry that it was believed there would be a salvage job. All of the passengers were taken off and lighters were sent out to salve the portion of cargo not affected by the water. The "Breakwater" was built at Chester, Pa., in 1880. The vessel was 1065 tons gross, 201 feet in length, 30 feet beam and 19 feet depth of hold. She was owned by the Southern Pacific Company for many years and operated between here and Portland. Later she ran between Coos Bay and Portland under ownership of Charles P. Doe. She was sold to Thomas Crowley and Andrew F. Mahony three years ago and was retained on this coast until March, when, in charge of Captain Wayland, the vessel steamed for New Orleans and was placed in the fruit and passenger trade between the Gulf port and Puerto, Mexico. Crowley said that the vessel was valued at about $150,000 and fully covered by insurance.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for by Section 1103 Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, NOVEMBER 27, 1918.

THE PEACE CONFERENCE.

The seamen of America have particular reason to rejoice in the definite announcement that President Wilson will be present at the Peace Conference in France.

President Wilson by affixing his signature to the Seamen's bill, over the protest of powerful and influential "interests" at home and abroad, completed in a peaceful manner the work begun by Abraham Lincoln, the great emancipator. Not only did he make American seamen free men but he gave the same priceless heritage to all foreign seamen when their vessels are in any safe harbor in the United States.

President Wilson understood the Seamen's struggle for freedom. He harbored no illusions upon the attitude of international capital invested in shipping. He knew that this one act of his would be bitterly resented by those who had always regarded the seamen as the least significant of all the factors which enter into the operation of ships. But, as most Americans have learned to know since, President Wilson does not hesitate to stand up for humanity and the cause of human freedom generally, whenever the issue is squarely before him.

The coming peace conference will dispose of various matters and issues of especial vital concern to seamen. The recent interallied Labor and Socialist conference at London accepted the American Federation of Labor's proposal to the peace conference that "seamen of the merchant marine shall be guaranteed the right to leave their vessels when they are in a safe harbor." This is an overshadowing, fundamental issue upon which the attitude of Woodrow Wilson will never for a moment be in doubt.

Of course, there will be correlated issues. For example, there will surely be a new international definition of the "Freedom of the Seas."

The freedom of the high seas is one of those phrases to which the whole world assents, in general terms, but to an exact definition of which hardly any two people can be induced to agree. We all know that for centuries there was not even any pretense of freedom of the seas, and a ship could no more sail the high seas without danger of piracy than a man could make a journey across his own country without danger from robbers. Even when the sixteenth century had brought some measure of safety from common piracy, to the tall ships that crossed the great oceans, there sprang up the whole race of the buccaneers and of the ship-masters sailing with "letters of reprisal" and "letters of marque." Not, indeed, until our proud young Navy had brought the Dey of Algiers, the Bey of Tunis, the Bashaw of Tripoli to their knees, and Lord Exmuth had crushed the forts of Algiers under his guns, and so practically driven the black flag from the high seas, could it be said that the freedom of the seas was established, even in time of peace.

President Wilson's views on what constitutes the freedom of the seas will probably resemble somewhat the terms of the code prepared by the American Institute of International Law at the request of Mr. Lansing.

In this code practically the whole of the existing international law on the subject of maritime warfare is expunged and a new international doctrine is set up, not only differing from but completely contradictory to all existing enactments. The new code abolishes blockade entirely; prohibits interference with mails; insists that merchant ships, both of belligerents and neutrals, shall be free from capture, and denies the right of visit and of search. It goes, indeed, even beyond all this. Under it, ships carrying contraband may in no case be confiscated or sunk, though their cargoes may be confiscated or destroyed, in the event of capture. Such terms would, of course, constitute complete freedom of the seas for all nations. They would confine maritime warfare to fleet actions and to the right to seize and destroy contraband cargoes.

Then, of course, there is the question of mines. There is certainly no conceivable danger to the freedom of the seas equal to that of the strewing of contact mines on the high seas. Such a method has been freely employed by the Germans, and with it the dangers of war upon the seas have been increased a hundredfold. Dangerous as such mines are at all times, their danger is multiplied indefinitely when, instead of becoming automatically extinct, they are left floating alive, to the imminent danger of any vessel crossing their path. It is obvious, therefore, that no code, defining the freedom of the seas, could possibly be regarded as sound which did not contain the most carefully worded provisions with respect to the use of mines.

Finally, even if an acceptable code could be agreed upon for the regulation of warfare on the high seas, there wolud still remain the tremendous difficulty of the enforcement of such a code. It is self-evident that such a code would rest for execution upon the willingness of the contracting parties to observe treaties. Unfortunately, however, one of the worst blows which this war has delivered against civilization has been contained in the fact that the world in general has gained the impression that there are nations more willing to sign than to observe treaties.

It is perfectly plain, therefore, that the decisions of any peace league could only be executed by the major force of the world powers. It follows, consequently, that a combination of certain powers, resolved to repudiate the authority of such a league, could, if strong enough, reduce the enactments of the league to the value of waste paper.

This brings us to the question of what a league of nations should be, what powers it should have and how that power should be controlled and directed. All these are momentous problems. And it will require the concentrated efforts of the greatest and noblest minds to reach a mutually satisfactory solution. But when all is said and done, the simple fact still remains that a condition precedent to the successful establishment of peace leagues is a loyalty to treaties when entered into. No mere treaty or peace convention can inject into nations a higher morality than that which is the expression of a nation's life.

At the time of going to press no announcement has been made as to who will accompany President Wilson in the capacity of U. S. plenipotentiary to the peace conference. Doubtless, more than one will be named for this great honor and responsibility. Others, with special knowledge and fitness for certain phases of the peace meeting's work, will go along in an unofficial capacity. Among these will be Andrew Furuseth, President of the International Seamen's Union of America. Furuseth will represent the seamen of America. Havelock Wilson, President of the National Sailors and Firemen's Union of Great Britain and Ireland, and recently returned to the House of Commons, is almost sure to be there. Havelock Wilson and Furuseth are old friends who have worked and fought together for many years. Between them they will wield a powerful influence for good. They will act as a powerful antidote to the insidious influences of the old international shipping ring that went to sleep during the war but will doubtless be resurrected if for no other reason than to keep the white seamen in their "proper" place. The way this has been done in the past is by manning a certain percentage of vessels with docile Asiatics. Every maritime nation in the world has a "double" of Robert Dollar, the champion of the Chinese manning policy in America.

All of these problems will be at or about the peace table. And, to repeat, it is good to know that President Wilson will be there —for he understands and appreciates the potential meaning of it all.

MR. FICKERT UNMASKED.

Mr. Densmore's revelations (published in part elsewhere in this issue) anent the administration of justice in San Francisco, will doubtless secure a new trial for Thomas J. Mooney, "framed," "fixed" and "railroaded" to the gallows by our own District Attorney, Chas. M. Fickert. Perhaps it will have a similar effect upon the fate of Warren K. Billings, another defendant in the Preparedness Day bomb outrage, now serving a life sentence.

At any rate, for the time being, we can well afford to leave this question to the Chief Executive of California. Tom Mooney is not scheduled to hang until December 13. And a lot of things are likely to happen between now and then.

The really pressing question is: "What shall be done with Mr. Fickert?"

Those who are not in intimate touch with San Francisco's political affairs scarcely realize that the unspeakable Fickert was placed in office as the candidate of the late, but not lamented, Union Labor Party. Worse still, during his Recall election, which took place less than a year ago, the overwhelming majority of San Francisco labor leaders either openly supported Mr. Fickert or remained silent altogether. Moreover, notwithstanding

the State Federation of Labor's formal endorsement of the Recall, the JOURNAL was the only one of three local labor papers which urged Fickert's forced retirement as a public official.

It will be remembered that the Recall failed. But to the credit of the rank and file of San Francisco's trade-unionists it should be said again that regardless of their "leaders'" advice a majority in each of the four strong union labor districts in the city voted "for" the Recall.

So much for the past attitude of Labor toward Mr. Fickert. But what of the future?

Will the Fickert Union Labor Club be resurrected to protect him and save him from the inevitable consequence of his disgraceful conduct?

Will Labor again permit any of its paid officials to help rescue this bully from the fate he so justly deserves?

Time alone will tell. This much is certain, however. Dame Justice can no longer be satisfied with a new trial for Mooney and Billings.

Justice, Fair Play and Common Decency demand an immediate ending of Mr. Fickert's reign of lawlessness and terror. If this is not done we had better cease throwing bricks at I. W. W.s and Bolsheviks, for in comparison with Mr. Fickert the former are sweet innocence personified.

The surrender of the German submarine fleet to a British squadron awaiting their arrival at a previously designated spot, is of momentous significance to merchant seamen the world over. The merchant seamen's sacrifice to ruthless submarine warfare has not been told, but steps are now being taken to ascertain at least the totals which America and each of the Allied nations has furnished in the successful efforts to keep vessels moving despite the constant hidden threat of death by the submarine. Ruthless submarine warfare failed to bring the results anticipated by the enemy, but it failed only because the men of the Navy and the Merchant Marine were equal and superior to the task set for them by a cruel and unprincipled but resourceful foe.

Investigation of the alleged disloyal speech of Senator Robert M. La Follette, at St. Paul, more than a year ago has finally been abandoned by the U. S. Senate Committee, where the matter has been pending. The committee vote was 9 against 2. Thus ends another attempt of Big Business to "get" that fearless and peerless champion of human rights. America never produced a man more dangerous to plutocracy than Senator La Follette. Able, courageous and almost tireless, this magnificent character has never been found wanting in any struggle where freedom and human rights were at stake. More power to that great son of Wisconsin, a statesman in every sense of the word, a man among men and a tried and true friend of all humanity!

There are those who still have doubts about the return of native Americans to a life work on sea. Well, last Monday night the Sailors' Union of the Pacific initiated a father and his son, both A. B.'s and both native Americans. This is just an incident in the drift of the tide, but it shows conclusively that the old stock is not only coming back but also coaxing along the second generation.

THE NEED FOR OCEAN TONNAGE.

A Summary of the U. S. Shipping Board's Work and an Outline of the Need for More Ships.

Just before his departure for Europe, Mr. E. N. Hurley, Chairman of the United States Shipping Board, summarized the work of that organization and outlined the need for ships which peace entails in the following authorized interview:

With the advent of peace the need for ocean tonnage, instead of decreasing, as many may suppose, will become one of the imperative necessities of the world.

The need for ships was never so great as it is now and this demand will continue for years until the world shall catch up with the tonnage it requires to transact its normal commerce. At present we are nowhere near providing that urgently needed tonnage. To make this clear there is now a deficit in the world's tonnage of approximately 20,000,000 deadweight tons. To put this disconcerting fact in another way, the ship construction needed to make up for losses and for the lapse in meeting the normal growth of shipping will be about 20,000,000 deadweight tons.

These 20,000,000 deadweight tons represent eight times the total of seagoing ship construction in the United States during the calendar year 1917. Yet never in human annals did anything ever approach the unprecedented production of tonnage in our yards since 1917. The 160 new shipyards which have been created under the United States Shipping Board Emergency Fleet Corporation have been busy day and night. There are now about 386,000 employes in these shipyards and 250,000 in allied trades.

If with this immense force working at top speed our ship production is ten times less a year than the 20,000,000 deadweight tons the world will imperatively need by 1920, it is clear that instead of being at the end of shipbuilding requirements we are only at the beginning. What has been done so far is only the inception of what we must further do.

This estimate of 20,000,000 is a conservative one. It is, in fact, based upon the normal growth of shipping in normal times. In peace times the growth of the world's commerce demanded a proportionate growth in shipping yearly. There was also an excessive depreciation that had to be replaced.

But when we consider the abnormal effects which the war had upon shipping it is more than probable that the needs of the world will demand by the end of 1920 much more than 20,000,000 deadweight tons.

In normal times the destruction of property is insignificant. Ships are not needed for the purpose of restoring cities and countries. But throughout the war, the devastation wrought had been so vast that whole parts of Europe will now have to be rehabilitated or restored, and in the shortest possible time. Vast supplies will have to be shipped from America for this purpose. Not only will villages and cities have to be rebuilt with the materials that we shall have to send, but the demand from many parts of Europe upon us will also be for great supplies of food, wearing apparel, iron and steel products, lumber, agricultural machinery, oils and many other products. It will take Europe a long time to recover from the effects of the war, and meanwhile we shall have to send over a far greater aggregate of materials than would normally be the case in a given time.

The second element showing the marked difference on shipping between peace and war times is that of depreciation.

In peace times a certain allowance is made for the running down, wearing out, or loss of ships. But in the war, the strain on merchant ships was much greater than would have been the case in ordinary times. This meant that the life of a ship counted for less and had to be more quickly replaced.

There is a third element showing that with peace the world will need relatively much greater tonnage than would ordinarily be supposed.

The whole world is short of raw materials. The countries that could import were importing just what they needed for war purposes and little or no more. With peace, there will be such a demand for raw materials as the world has never before seen. Factories the world over must be quickly transformed from the making of war essentials to the manufacture of peace products. Improved machinery will be installed. Women workers brought into the factories by the war will remain, and will be reinforced by the returned men from the armies. The output of manufactured commodities will be very great.

All of this means that the movement of raw material before the war is no standard of what that movement will be now. It will be a vast and urgent movement, with all countries clamoring for the rush of raw materials. The shortage of the world's manufactured goods will have to be made up, and with the least possible delay. For this purpose alone the need of an enormous tonnage is self-evident.

If the war had not come the estimated normal increase in the world's merchant marine would

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Nov. 25, 1918.
Regular weekly meeting came to order at 7 p. m., Ed. Andersen presiding. Secretary reported shipping good. The sum of fifty dollars was donated to the Laundry Workers on strike at Vancouver, B. C. The following were declared elected delegates to the twenty-second annual convention of the I. S. U. of A., to be held at Galveston, Texas, on January 20, 1919: Andrew Furuseth, George Larsen, C. F. May, Jack Rosen and Paul Scharrenberg.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Nov. 18, 1918.
No meeting. Shipping slow; men scarce.

J. ETCHELLS, Agent.

Room 11, de Cosmos Block, 1424 Government St.

Vancouver, B. C., Nov. 18, 1918.
Shipping fair.

WM. HARDY, Agent.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Nov. 18, 1918.
No meeting. Shipping and prospects fair.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, Nov. 18, 1918.
Shipping medium.

P. B. GILL, Agent.

84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Nov. 18, 1918.
Shipping fair; few members around.

ED. ROSENBERG, Agent.

P. O. Box 280. Tel. Main 557.

Portland Agency, Nov. 18, 1918.
Shipping medium; prospects fair.

JACK ROSEN, Agent.

88½ Third Street. Tel. Main 6013.

San Pedro Agency, Nov. 18, 1918.
Shipping good; members scarce.

HARRY OHLSON, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Nov. 11, 1918.
Shipping good; prospects fair.

R. H. BLACKWOOD, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Nov. 21, 1918.
Regular weekly meeting was called to order at 7 p. m., Ed. Andersen in the chair. Secretary reported shipping slow. The full Shipwreck Benefit was ordered paid to one member wrecked on the S. S. "Dumaru." Balloting on officers for the ensuing term was proceeded with.

EUGENE STEIDLE, Secretary.

42 Market Street. Phone Kearny 5955.

Seattle Agency, Nov. 14, 1918.
Shipping fair; members ashore are getting more plentiful.

LEONARD NORKGAUER, Agent.

Grand Trunk Dock, Rooms 203, P. O. Box 214. Phone Main 2233.

San Pedro Agency, Nov. 13, 1918.
No meeting. Meetings still prohibited by order of the Board of Health. Shipping fair; few members ashore.

HARRY POTHOFF, Agent.

Sepulveda Bldg., 128½ 6th St. Phone Home 115; Sunset 66 W.

DIED.

John Alton, No. 1476, a native of Finland, age 34. Died at Anchorage, Alaska, Nov. 20, 1918.

Peter Carlson, No. 1877, a native of Norway, age 34. Died at Seattle, Wash., Nov. 21, 1918.

Gustav Lindblad, No. 2026, a native of Sweden, age 29. Died at Seattle, Wash., Nov. 14, 1918.

Carl Lund, No. 2107, a native of Finland, age 33. Died at San Francisco, Cal., Nov. 21, 1918.

Edvin Tenfjord, No. 1174, a native of Norway, age 30. Died at Seattle, Wash., Nov. 12, 1918.

Correction.—The official announcement of the death of Hilding Andersson, No. 1721, published in last week's issue of the Journal, was an error due to misinformation.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

False reports have been going out from Washington to the effect that the joint chairmen of the National War Labor Board, Messrs. Frank P. Walsh and William Howard Taft, have called upon President Wilson to abolish the Board, thereby stopping its work as a supreme court of labor disputes in the United States.

The fact is that Walsh and Taft have sent a letter to the President, reminding him that the Board was originally created in order to prevent strikes and lockouts which would hinder the production of war materials, and asking when he proposes to terminate its work, in case he does not propose to continue the work of peaceful settlement of labor disputes.

This letter is simply a "feeler." If the labor movement of this country wants the Walsh-Taft board to remain, and will immediately and emphatically indicate that desire to the members of Congress and to the Secretary of Labor and to the President, by resolutions forwarded by wire or mail, the President will see to it that Congress provides for the continuance of the Board. If organized labor is not interested in the Board, and does not find a real economy in the methods of economic struggle which the Board has introduced, then probably the Board will be allowed to die. Detroit and Seattle, Denver and Duluth, Cincinnati and Denver—all of the central labor bodies in the East and West and North and South can get an attentive hearing, in the next few weeks, for their resolutions on the National War Labor Board.

Sixty-two awards have been handed down, thus far, by this tribunal. More than three hundred industrial disputes have been investigated and are in process of action by the Board. More than eight hundred complaints have been filed with it for investigation and hearing.

It is probable that awards will be made within a week in the Denver Tramways case, in the dispute over jurisdiction in the Minneapolis Steel & Machinery case, and many others that have hung fire for a long time.

The one big failure of the War Labor Board plan, as drawn originally, was the attempted establishment of subordinate boards in the chief industrial cities. One such local board was organized in St. Louis. It failed to satisfy anybody. The Board finally came to the conclusion that the only way in which it could prevent strikes was directly and in person—never through subordinate bodies.

Under the recently revised procedure of the Board, a case can be handled, from inquiry to final award, in fourteen days. Some of the Board members believe that it will finally catch up with its accumulated work. Others are not so sure.

In the meantime, the principles upon which the Board's awards are based have been established in American industry as the fundamental demands of the wage workers, which are necessary to safeguard organization and to create industrial democracy. These principles have been drafted into a bill, which one of the small labor group in Congress is to introduce in the House, in the hope of fixing the principles in the Federal statutes.

That some agitation and show of industrial strength will be necessary to put such a measure through the new Congress may be guessed from the fact that even so mild a measure as the anti-child-labor amendment to the pending revenue bill has been twisted out of shape by its introducer, Senator Pomerene of Ohio, after the President had approved the draft of the amendment submitted to him by the labor lobby and the Department of Labor. Yet this present Congress is much nearer to sympathy with organized labor than, apparently, the next Congress will be. There is only one chance that the next Congress is to be liberal: it may be frightened by the wave of social revolution in Europe, and may decide to follow cautiously in the footsteps of the British premier.

What Pomerene did to the Child Labor amendment was this—he so changed the wording of the measure that its enforcement will be under the authority of the Treasury Department, through the collectors of internal revenue, and only when requested to do so by the Treasury will the Department of Labor be able to take charge of the enforcement. The genuine measure provided that the Labor Department should enforce the Child Labor law. Pomerene claims, of course, that the Treasury will in any case ask the Labor Department to assist it in this job. As the amendment provides for collection of a special tax of 10 per cent. on the profits of firms employing children, it follows the principle used in the law which stopped the manufacture of poison-phosphorus matches. Collectors of internal revenue will be directed to enforce it. Many of these collectors are in favor of the employment of child labor, and will not be interested in seeing the law rigidly obeyed. The Department of Labor will have to watch both the employers and the unsympathetic among the collectors of internal revenue. Pomerene is against woman suffrage and various other steps in civilization.

* * *

Striking for the privilege of working twelve and fourteen hours a day, when ordered to work only eight hours, is the latest freak of policy among large numbers of building trades mechanics and other workers on Government jobs in the East. International officers of the Carpenters, the Painters and other organizations are desperately trying to get the men at Norfolk, Delaware City and other points to go back to their jobs, and to realize that the Government can get along pretty well without most of them even now: that in a few weeks they will remain at work only because the Government does not want them to be left unemployed. The strikers answer that they are making good money by working long hours, and that the cost of living is now so high that eight hours' pay will not support their families. Reports made by Army construction officers are that some of the men refuse to pay further on Liberty Bonds, until they are given overtime work to do.

"We fought for years to get the eight-hour day, and we conceded the longer day only because the Government needed our help in the war emergency," said General Secretary Gallagher of the Painters this morning. "We are now told by our own members that they refuse to meet the need for reduction of war construction by cutting out this overtime. They want the money, not the eight-hour day which is the law of our Union. I am telling our men that we have to stick to our eight-hour rule, and we ought to be glad to co-operate with the Government in shortening the hours so that more men can be kept employed until normal employment shall be provided."

There is sharp discontent, already, at the lack of a definite suggestion from the executive council of the American Federation of Labor as to how the great army of war workers shall be transferred to permanent jobs without loss of time or of industrial standards. No surprise need be occasioned if the confusion of the present is reflected in the internal politics of the Federation at the convention at Atlantic City next June. The executive council is now evenly divided between the elements representing the Mine Workers, Carpenters, Teamsters, Typographical and their friends, on the one side, and the elements following Mr. Gompers on the other. Mr. Gompers is reported to favor letting the Administration take the responsibility for meeting the whole problem of demobilization, while the opposition is inclined to draw up a "labor" program, just as has been done in England. Certainly if any large number of men, on the closing of the war-munitions plants, are thrown out of work for any length of time, or have to accept a wage that buys a poorer living, the trade union halls of the country will ring with it, and someone will be held to blame.

The possible abolition of the National War Labor Board is connected with this promise of a new labor politics. If the Board turns back five hundred industrial disputes without an award, there seems no way of avoiding that many strikes. Organized labor will ask why the Board was permitted to die; when the answer is given a militant minority will still be dissatisfied.

* * *

Speaking of the prestige of organized labor in this age of American democracy reminds one of a clause in a Federal indictment in California. It reads:

"Defendants are charged with having conspired to injure, oppress, threaten and intimidate certain citizens of the United States in the free exercise and enjoyment by them respectively of certain rights and privileges secured to them by the Constitution and laws of the United States, by demanding stated wages and certain terms from the employers of labor throughout the United States, and unless the employers of labor will agree to pay the stated wages and agree to the certain terms demanded, the said defendants and the said persons with whom said defendants conspired would refuse to work for or give their services to the said employers and would engage in what is known in everyday parlance as a strike."

It is probable that when a hundred congressional districts have followed the example of San Francisco, St. Paul, Duluth and parts of New York City, and have sent trade unionists to Congress, no more Federal indictments will include a clause like that. On the other hand, so long as union men stick political knives into the backs of men like Keating and Hilliard in Colorado, Meyer London in New York and Lunn in Schenectady, the brand of felony

will always be kept ready for the back of a striker.

* * *

Trade union officials are inquiring every day, in Washington, about the possibility that labor will have a place on the American delegation to the peace congress. They are anxious also to know when the executive council of the A. F. of L. will name its delegation to the world congress of labor which will meet in the same city and at the same time as the peace conference, and will act as a spokesman of the laboring masses of the world in reviewing the proposals of the delegates from the various political cabinets.

European labor is overwhelmingly Socialist in political policy, and the world labor congress will be correspondingly radical. The American delegates, chosen by the executive council of the Federation, would be conservative enough to get passports, but would find themselves in the minority on the fundamental issues drawn in the labor parliament.

DOINGS IN ENGLAND.

An exceptionally interesting forecast of British Labor policies in general, and of the ensuing British elections in particular, appears in the current issue of Reedy's Mirror. It was written by the London correspondent of our contemporary and is too lengthy for reproduction, as a whole. Pertinent excerpts follow:

"The opinion here seems to be that Lloyd-George will win the next election, but the one after that will smash him.

"The Labor party will contest, without much hope, three hundred seats in the next election. The Labor party is the party that will rule Great Britain. It may not win many seats, but its ideas will win. Its program of social amelioration has won statesmen in both the old parties. It favors taxation of land values, community bargaining, housing schemes, free trade and possibly conscription of capital in large blocks in order to take the tax burden off the plain people. Why, when the President of the United States wouldn't agree to receive delegates of the Labor party it was Tories who sent him word that it is the Labor party that supports his fourteen proposals, while the Conservatives still hope for something material for England out of the war. Arthur Henderson, the Labor leader, commands everybody's respect. Lloyd-George's forcing him out of the Cabinet because he favored the Stockholm conference, cost the Premier incalculable Labor support.

"John Burns has come back into politics. You know he never was a Labor member, but a Liberal. He resigned from the Cabinet with John Morley, rather than vote to declare war in August, 1914. Since then he's said nothing publicly. He's about sixty but very lively. He was a chandler's apprentice at ten, an engineer's riveter later, then an engineer. He is self-educated. His economic views he got from Adam Smith's 'Wealth of Nations,' dug up in an excavation in which he was working on the Niger. He was and is a trades unionist. He led and won the great dock strike in 1889. That brought him to public notice, into Parliament from Battersea, finally into the Cabinet as president of the local government board. 'Just for a handful of silver he left us,' quoted some of his old radical associates. At a meeting a Socialist heckled him with this question: 'Do you mean to accept a salary of £2000 a year?' 'Yes,' he replied; 'it is the trades union rate of pay for Cabinet Ministers. Not being a blackleg like you, I could not accept less.' He did great work for poor laws and old-age pensions, and a hobby of his was town-planning and housing. Liverpool University gave him an honorary degree. It is said that the club life of the Commons 'got him' and he became unproletarian. But when the war came and he wouldn't support it he gave up cheerfully his salary of £5000 a year and dropped back to the plain member's £400 a year. I read about him and his home in Battersea and it's like what I read in the New York papers just before leaving about the standing of Al Smith as a sort of visible providence to his humble neighbors in the old Fourth Ward. His house, says one writer, is 'open all day long to the miscellaneous crowd of people who had been wont to resort to him for advice and help—lads out of work seeking a job, pale-faced girls applying for tickets for a convalescent home, poor mothers anxious about the future of their children, workmen wishing to know how they could legally protect themselves against the demands of an unjust employer.' Burns is a bit egotistical. That he's a big man is shown by the fact that it was John Morley who induced that great, if simple, leader, Campbell-Bannerman, to put him in the Cabinet in 1905. That he will carry Battersea in the next election is possible, even probable, but he will have some trouble, being anti-khaki. I don't think he will displace Arthur Henderson as Labor leader. But his joining the Labor party is a big card for that party.

"I asked the pastor of the largest London church, non-conformist, what he thought the church would do. The church, said he, will go for the Labor program. Why? Because it is a Christian program of reconciliation—no war after the war, no fostering of military caste, no more coddling of privilege. And there are many of the established clergy who will go with the non-conformist clergy. The established church is shattered. Everything established is shaken to the verge of a fall. The King! He may stay a while as a sort of incarnate flag. I asked the pastor how the war affects religion. He said men who were pietistic when they entered the war, come out unbelievers. Their religion was thin, conventional, accepted without thought. The high explosive blew it away. The unbelievers who went into the war came out religious, not formally so, but with a reverent sense of some overseeing power that they can't define, a something pantheistic perhaps you'd call it, but I think more personal than that. It's a kind of deep, pervasive, poetical thing. Almost all the war poetry in England is religious in this fashion."

NORWAY'S HEAVY LOSS.

Norway lost during the war 831 vessels, aggregating nearly 1,250,000 tons, according to official statistics. In addition, thirty-three vessels of approximately 69,000 tons were damaged by German submarines. One thousand one hundred and twenty lives were lost in these disasters.

In practice, "piece-work" and "part payment" are synonymous terms.

NEED FOR HEALTH INSURANCE.

"Just and scientific health insurance legislation, to furnish needed medical and financial relief to sick wage-earners during incapacity, foster prevention of illness, and to be democratically managed without participation by private insurance companies," is urged in a resolution adopted unanimously at the recent convention of the Arkansas Federation of Labor.

"Experience in raising our national Army has revealed an alarming amount of physical unfitness among our youth, reaching in some States as high as 40 per cent. of those examined," the resolution states. "Official State commissions in California, Massachusetts and New Jersey have submitted reports strongly favoring comprehensive systems of workmen's health insurance as a means of conserving health and physique of our people, and several additional States have created commissions to investigate this important question. European countries which have for years enjoyed comprehensive systems of health insurance have extended and liberalized them even during the war, thus conclusively showing their extreme social value."

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER

(Continued from Page 3.)

has been acting may be made in as orderly a manner as possible.

"A committee named by the President has been and is now at work to devise the best mechanism of bringing about the adjustments from a war to a peace basis. The report of the committee may take the form of suggested legislation.

"The whole effect of the readjustment plans will be to the end of bringing about necessary changes with as little dislocation as possible and the full opportunity for all to benefit as in the past by individual ingenuity, vision and fair dealing."

CONVENTION CALL.

To All District Unions of the International Seamen's Union of America.

Greetings:

The International Seamen's Union of America will hold its twenty-third annual convention in Galveston, Texas, beginning on Monday, January 20, 1919, at 10 a. m., and will continue in session from day to day until its business is completed.

The importance of this convention will demand that each district union be represented by its most able, experienced and faithful members in order that the many grave questions which now confront the seamen may be dealt with and acted upon to insure further progress of our movement.

As the membership of the International Seamen's Union is now over the 47,000 mark, and as each district union is in good condition financially, it is expected that a full quota of delegates will be sent from each district union. Those who have already elected delegates are requested to consider the matter while those who have not selected their repreesntatives are urged to bring this about.

The unions in the Atlantic district will make all arrangements for said convention and be prepared to meet the delegates and tender them every accommodation necessary in a function of this nature.

Representation.

The following sections of the Constitution of the International Seamen's Union of America govern representation at the convention:

Article III. Section II. Representation at the convention shall be based upon the average per capita tax paid during the year. Organizations shall be entitled to one delegate for two hundred members or more, three delegates for five hundred or more, and one delegate for each additional five hundred or majority fraction thereof.

Section III. Affiliated unions shall be entitled to one vote for each one hundred members or majority fraction thereof. When more than one delegate represents an organization, the vote of their unions shall be equally divided among such delegates.

Section IV. Delegates shall have the same qualifications as the elected officers of the organization represented and shall be elected by a general vote of each organization provided. No one shall be seated as a delegate who is also a member in any labor organization not affiliated with the International Seamen's Union of America, etc.

Credentials.

Duplicates of credentials should be mailed **not later than December 15, 1918,** to the International office, in order that the Committee on Audit and Credentials, which meets prior to the convention, may have ample time to complete its work and be ready to submit its report when the convention convenes.

It is suggested that district unions or delegates having matters they desire to submit to the convention will do so by forwarding copies of resolutions which they desire to introduce, to the International's Secretary-Treasurer at least two weeks in advance of the convention.

You are respectfully requested to take up the matters herein mentioned with your union in order that the Convention Call may receive careful consideration by the largest number of members possible.

With kindest regards, I remain,

Fraternally yours,

T. A. HANSON,

Secretary-Treasurer International Seamen's Union of America.

Chicago, Ill., Nov. 24, 1918.

THE NEED FOR OCEAN TONNAGE.

(Continued from Page 7.)

have been (from August 1, 1914, to December 1, 1919) 19,740,000 deadweight tons. Merchant marine losses, actual and estimated, for the time between the same dates, are placed at 28,390,447 tons. And what during this period will have been the construction of ships? Not including enemy countries it figures, actual and estimated as probable, 32,558,630 deadweight tons by the end of next year (1919).

There will then be, according to this computation, a net deficit due to the war of 15,751,817 tons.

There is much uncertainty as to how theoretical solutions of certain problems will work out after the war. But there is no uncertainty as to the shipbuilding industry. It is going to be a permanent institution. The United States, Great Britain and other nations will have all they can do for years to provide the necessary world ship tonnage. Some industries that came in with the war will go out with the war. But not so the shipbuilding industry. It is here, and is here not only to stay but to grow.

All the probabilities point to the conclusion that within five years we shall have a force of one million men in connection with the American merchant marine. This force will include shipyards workers, men and women in factories making ship equipment, officers and seamen manning our fleets, and numerous groups engaged in export trade.

Our export trade has already grown by great baunds. In the four fiscal years preceding the war the total foreign trade of the United States was $15,972,000,000. In the four fiscal years since the war it has increased to $29,232,000,000. Our imports for these two periods have increased from $6,887,000,000 to $9,558,000,000. Our exports during the same time have increased from $9,084,000,000 to $19,674,000,000, and this notwithstanding the fact that our exports of cotton decreased about 33 per cent. because of Germany, Austria and some other countries being shut out of the market. True, in stating these great totals, mention must be made of the fact that on the average money values have risen 50 per cent, but even with this allowance, our exports have greatly increased not only to Europe but to all other continents as well.

The United States spent immense sums building the Panama Canal. These sums have totaled $375,000,000, including $50,000,000 paid to the New French Canal Company and to the Panama Republic. Yet when the canal was built and opened the merchant marine was at such a low ebb that the amount of our sea-borne imports and exports carried in American vessels was trifling. But now with the great American merchant fleets already created and the still greater fleets in process of creation by the United States Shipping Board the Panama Canal has become a waterway of prime importance to the American merchant marine and an undertaking and investment of increasing benefit to the American people.

In 1914, the seagoing American merchant marine comprised only 391 vessels, of 1500 deadweight tons and over, totaling 1,660,679 deadweight tons. To-day our seagoing fleet, of 1500 deadweight tons and over, totals 1389 vessels of 7,043,210 deadweight tons. All told, within the jurisdiction of the Shipping Board, including requisitioned and chartered ships, there are, at the present time, 2312 seagoing vessels totaling 10,114,334 deadweight tons. Since August, 1917, nearly 4,000,000 deadweight tons—to be exact, 3,912,836 deadweight tons—of new shipping have been launched, and 2,894,510 deadweight tons have been completed and delivered for service. Nearly nine times as much seagoing tonnage has been built in the United States, this year, as in the banner pre-war year of American shipbuilding.

This is only the beginning of a program calling for 25,000,000 deadweight tons. The major part of the billions we have appropriated were for needs that will not outlive the war. But the expenditures authorized for the United States Shipping Board represents an outlay that will be important after the war. It includes construction plants, housing, transportation, recruiting and operation. Every dollar of this is a sound investment for America. It will also provide a great merchant fleet that will repay its cost to the taxpayers by greatly helping in the near future in reducing the cost of commodities to the consumer. To a very large extent the cost of great numbers of products has gone up because of the scarcity of world shipping tonnage.

In nearly all of the important articles imported, prices have greatly increased.

The average price of clothing wool in 1918 has been 54 cents per pound as against 23 cents per pound in 1915.

Raw sugar avèraged 4.8 cents per pound in 1918 as against 2 cents per pound in 1914.

Raw silk averaged $5.25 per pound in 1918 as against $3.09 per pound in 1915.

Mackerel averaged 20.72 cents per pound in 1918 as against 10.98 per pound in 1914.

Cheese averaged 41.6 cents per pound in 1918 as against 17.3 cents in 1914.

Manila hemp in 1918 averaged $353 per ton as against $180 per ton in 1915.

Flax averaged $1037.71 in 1918 as against $290.37 in 1914.

These are a few examples of what to a considerable measure lack of shipping has brought about. The program of the United States Shipping Board will do much in assisting toward relieving this condition and in bringing relief to the consumer. Large sections of our people are producers as well as consumers. Our fleets of ships will take away the products they raise as well as bring here the essential things we have to import from all parts of the world.

JUSTICE IN SAN FRANCISCO.

(Continued from Page 2.)

regard for law; his affiliation with, and servile truckling to, the most bitterly partisan anti-labor element of the community; his close personal friendship for Pete McDonough, notorious briber of juries; his illegal quashing of the David Blaine indictment for Bennie Selig; his attempted frameup of Mrs. Judd to testify against Mrs. Mooney—these and similar questionable activities apparently represent the chief business and ordinary daily routine of the present District Attorney of the City and County of San Francisco. In the strictest and most literal meaning of the word, anarchy reigns in the office which is supposed to be dedicated to law and order.

Ordinarily the relentless persecution of four or five defendants, even though it resulted in unmerited punishment for them all, would conceivably have but a local effect, which would soon be obliterated and forgotten. But in the Mooney case, which is nothing but a phase of the old war between capital and organized labor, a miscarriage of justice would inflame the passions of laboring men everywhere and add to a conviction, already too widespread, that workingmen can expect no justice from an orderly appeal to the established courts.

Yet this miscarriage of justice is in process of rapid consummation. One man is about to be hanged; another is in prison for life; the remaining defendants are still in peril of their liberty or lives, one or the other of which they will surely lose if some check is not given to the activities of this most amazing of district attorneys.

The issue involved is immeasurably larger than the City and County of San Francisco. On the day that the State Supreme Court confessed that it was without power in the premises the issue became larger even than the sovereign State of California. The fact is that in its true proportions it is an issue not unworthy to be ranked with the other great problems arising out of the war now being waged for the rights of man and the liberation of peoples.

With these facts uppermost in mind, it seems but logical, in bringing this report to a close, to suggest that it would be well within the province and privilege of the Federal Government to devise some means by which, without giving offense to the duly constituted and honestly functioning authorities of the City and County of San Francisco, these several defendants would be assured of those rights before the law which are guaranteed by the Federal Constitution.

I have the honor to be, very respectfully yours,

J. B. DENSMORE,

Director General of Employment.

THE FUTURE OF U. S. SHIPPING.

The meeting of the National Foreign Trade Council in New York on November 8 to consider the immediate future of American commerce, and more especially American shipping, will cause some speculation among those who have dared to hope that business men will not resume after the war where they left off before the war began. Hope of a better order lies in the stand taken by the Council against an economic war after war, and for the adoption of a national maritime policy that will permit the permanent retention and operation of the newly constructed American merchant fleet under the American flag. But doubts are prompted by a paragraph in the committee's report that has a suspicious slant toward an attack on the Seamen's Act.

"No one contends or believes," says the report, "that it is not desirable to have American seamen enjoy the best possible conditions of life and service, and receive in wages due an ample return for their labor. But it is perfectly obvious that provisions of law which require American vessels to maintain larger crews and to pay them higher wages than is the case with foreign vessels necessarily subject such American vessels to a disadvantage which renders it difficult, if not impossible, for them to continue in operation against the competition of foreign vessels which can operate at lesser cost." And the report goes on to say that unless a proper maritime policy is adopted this great fleet will disappear under "the operation of inexorable economic laws." A tiny ray of hope lies in the suggestion of the committee of the possibility of an international agreement to be effected at the peace conference that should enable the working out of uniform and equal conditions upon all vessels.

There would have been greater confidence in the work of the National Foreign Trade Council had it been more representative of shipping interests as a whole. It is indicative of the narrow provincialism that still prevails in the thought of many business men that such a meeting as this could have been held without a representative of one of the chief factors, the seamen. The name of Andrew Furuseth or Victor Olander or any other competent man to speak for the seamen is not noted in the list of the men present. There were representatives of ship owners, railroads, banks, and various business enterprises; but there was no representative of labor, and particularly of the kind of labor considered in the report, the seamen. The name of John J. Arnold, vice-president of the First National Bank of Chicago, gives assurance of an influence along broad and equitable lines. But the name of Captain Robert Dollar, the San Francisco shipowner who has so bitterly fought the Seamen's Union, stands for reaction of the most extreme type. Had Andrew Furuseth sat with them, and particularly had he been a member of the committee that formulated the report, there would have been something more than a bare hope in its findings.

It is indicative of the hold that conservatism has in the minds of business men that they continue to think of labor in terms of inanimate and impersonal factors. The captains of industry are slow to realize that labor is an indispensable factor, clothed with personality and embracing all the possibilities of human beings. The fact that its voice has heretofore been feeble in its own defense should deceive no one into thinking that it will always be. A new spirit has entered into the employed class. Time has been set ahead a generation by the war. Russia is having her troubles only because the bottles were too old to hold the new wine. Other nations, including our own, can, if they will, profit by Russia's experience. The new wine of democracy is flowing from the presses, and unless the containers be fit they will burst, and much precious spirit that should go to the re-creation of the race will be wasted.

The democratization of industry is no more a vain dream than the democratization of government. The same influence that drove man to demand a voice in political affairs is forcing him to demand a voice in industry. And the sooner business men recognize this fact the better for all concerned. The National Foreign Trade Council cannot possibly get the seamen's point of view. The seaman alone has that. And though he may imperfectly understand the limitations of capital, he does see the needs of labor. If the two get together as reasoning beings they can soon come to an agreement; but as long as they remain separate, each looking upon the other as an enemy seeking his undoing, they will get nowhere.

Ever since the Seamen's Union began its agitation for the relief embodied in the Seamen's Act the shipowning interests have been appearing before Congress, and conducting a campaign in the press, to show that the rights demanded by the seamen of this country could not be granted because they did not obtain among the seamen of other nations. No effort was made during all that time by the shipowners to raise the standard of life among foreign seamen. But American seamen met this point. That was the real meaning of the clause in the Seamen's Act permitting seamen to leave their ship when safely in port. With that provision in force, and applying to all vessels entering American ports, conditions on foreign ships would inevitably improve, or their crews would leave them when they touched our shores.

There is no occasion for the existence of any business or industry that does not accord its employes decent living conditions. American shipowners can continue to fight the Seamen's Act, which stipulates decent living conditions for the men, or it can join with the men in their efforts to compel every ship that enters an American port to grant those conditions. They can stand for a policy that will reduce all seamen to the level of Lascar and Chinese crews; or they can establish a scale of living that will cover the seas with American sailors. Many of the young men who have manned transports and warships during the past year would continue the life under favorable conditions. It is the shipowners and not the Seamen's Union, that will determine whether or not the great emergency fleet will continue under the American flag. The National Foreign Trade Council now faces a great opportunity.—The Public.

We should not be surprised if the child who is tied to a machine develops a case of "wheels" in after life.

Labor News

Diseases of the nerves and numbness of the fingers and hands are found by the Bureau of Labor Statistics to be the result of continuous use of the air hammer by stone cutters. The report says an air hammer has been devised that will obviate the evil.

Child labor, according to statistics gathered by the Children's Bureau, has enormously increased during the war. In Wilmington, Delaware, 61 per cent. more children have taken out working permits than last year. In some places in Massachusetts the number has doubled.

Workers in a shipyard at Jacksonville, Florida, have undertaken to prevent needless carelessness by a self-imposed fine of one dollar for each offense, the fines to go to the sick and accident fund. Scarcely had the agreement been made than a carpenter dropped a piece of timber. He paid his fine willingly, and declared it to be the best kind of education.

The War Labor Board, of which ex-President Taft and Frank P. Walsh are joint chairmen, has ordered the reinstatement of men of the Brooklyn Rapid Transit Company who were discharged for joining a union. The Board held that according to the war agreement the workers have the right to organize freely in trade unions of their own selection.

Immigrant aliens admitted to the United States during the year ending June 30, 1918, numbered 110,618; those departing, 94,585. According to race the immigrants were: Mexicans, 17,438; English, 12,980; Japanese, 10,168; Scandinavian, 8,741; Spanish, 7,909; French, 6,840; Italian, 6,308; African, 5,706; Scotch, 5,204; Irish, 4,657; and the remaining races less than four thousand each.

One line of work for which women have clearly demonstrated their fitness is banking. In England it is reported that more than 54,000 banking positions are now being filled by women. The process of filling bank jobs with women in this country is also going on at a fairly rapid rate. Some banks began to substitute girls for men early in the war, and now have a good proportion of feminine help. The girls have been found highly efficient and satisfactory workers in most of these positions. They have greater patience than men in routine jobs, and some women are fully equal to men in initiative.

Child Labor Day, which will be observed throughout the country on Saturday, January 25, in synagogues; on Sunday, January 26, in the churches; and in the schools on the following Monday, these dates having been designated by the National Child Labor Committee, will be an occasion for reviewing the work and achievements of Children's Year. The Children's Bureau of the Department of Labor is arranging to have reports from its field workers available for the programs of the churches, schools, clubs and other organizations. The Children's Year work includes, besides the baby-saving campaign, a crusade against wartime child labor and a nation-wide back-to-school drive, in both of which the National Child Labor Committee is participating.

INFORMATION WANTED.

An appeal has been taken by the owners of the Bark "Portugal" from the decision of the Federal District Court in the matter of salvage award of $30,000 recently made and referred to in these columns. The determination of this appeal may be a matter of six months. Seamen who wish to get their money as soon as possible should communicate with Silas B. Axtell, Attorney, One Broadway, New York, in order that I may send them a power of attorney form to be signed, which will be required by the court before the money can be paid out. The crew, of course, are sure to get some money and they will probably get their portion of the amount awarded by the lower court. It seems quite possible that the decision of the lower court will be affirmed. 7-24-18

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City. 7-24-18

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

INFORMATION WANTED.

The foHowing men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City. 6-5-18

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

John Anderson and A. H. Johansen, who witnessed the trouble at Salina Cruz, Mexico, when Gunnar Anderson of the SS. "Nehalem" was taken into custody by the local authorities, will please call at once on F. R. Wall, 324 Merchants' Exchange Building, San Francisco, Cal.

Home News

President Wilson has signed the emergency agricultural appropriation bill, with its legislative rider providing for National prohibition from July 1, 1919, until the American Army is demobilized.

Forest Commissioner Colby of Maine estimates the forest lands of that State at 15,000,000 acres, mostly in large holdings. There are eighteen holdings of over 100,000 acres, and ten of over 200,000. The average cut for the past ten years is 1,000,000,000 feet, which is about one-tenth the annual growth. Maine at present is the leading State in the consumption of pulpwood, using about 1,025,000 cords a year.

An order making effective Government possession and control of marine cable systems of the United States, proclaimed by President Wilson under date of November 2, was issued on November 20 by Postmaster-General Burleson. It directs that until further notice cable companies shall continue operation through regular channels, and asks the cooperation of officers and employees of the companies and of the public.

William Gibbs McAdoo, Secretary of the Treasury, Director-General of Railroads and often discussed as one of the Presidential possibilities of 1920, has resigned his offices to return to private business. President Wilson has accepted his resignation. McAdoo will give up the Treasury portfolio as soon as a successor has been selected. He wished to lay down his work as Director-General of Railroads by January 1, but will remain if the President has not then chosen a successor.

Major General William C. Gorgas, just retired as Surgeon General of the United States, and now returned to this country, has received from Secretary Baker a letter, which has been made a part of his military record, expressing the appreciation of the nation for his distinguished services during his long career as medical officer. General Gorgas has been called to the active list, and is now preparing a report on the care and treatment of the American soldiers in France.

In California, Idaho, Montana and Wyoming 735,000 acres of land were designated as non-irrigable during October and opened for entry in tracts of 320 acres under the Enlarged Homestead act, according to a communication from Secretary of the Interior Franklin K. Lane received by the United States Land Office at San Francisco. Approximately 1,166,000 acres of land in Colorado, Idaho, New Mexico and Wyoming were opened for entry in tracts of 640 acres under the Stock Raising Homestead act during October.

The erection of community houses as fitting memorial to the soldiers of the present war, instead of shafts such as were erected after the Civil War, is suggested editorially in the "American City" for September. "Liberty buildings" is the name proposed for these structures, which, it is suggested, should be designed "to help the living while commemorating the dead." Let the erection of these buildings, says the editorial, be begun "at such time as may best help to tide over in some measure the period of readjustment when our returning soldiers or our industrial workers shall be in need of employment."

Domestic and Naval

The American steamship "Faith," the largest concrete ship in the world, launched March 14 last on San Francisco Bay as an experiment in this method of construction, has arrived at New York with a cargo of sugar from Cuba.

France's proportion of the Allied naval strength is announced as follows: In the Mediterranean—Patrollers, 65 per cent.; destroyers, 38 per cent.; submarines, 30 per cent. In the Channel and the Atlantic—Submarines, 17 per cent.; patrollers, 11 per cent.; destroyers, 5 per cent. France is also assisting in convoying American troops across the ocean.

Loss of 145 American passenger and merchant vessels, of 354,440 tons, and 775 lives, through acts of the enemy during the period from the beginning of the world war to the cessation of hostilities November 11, is shown by figures just made public by the Department of Commerce's Bureau of Navigation. The report does not include several vessels, the loss of which has not been established as due to acts of the enemy. Nineteen vessels and sixty-seven lives were lost through use of torpedoes, mines and gunfire prior to the entrance of the United States into the war.

Steamships which are able to purchase sugar in foreign ports must deduct the amount of such purchases from allotment made by this Government, the Food Administration has announced in the following ruling: "The sugar allowance for all purposes for any ship applying to the War Trade Board for bunker license will be three ounces per person per day, whether purchased in the United States or elsewhere. This per capita allowance also applies to the crews. The allowance for passengers is the same as hotels—that is, two pounds for every ninety meals served."

Contracts for fifty wooden barges and fifty composite tugs, designed for use in the New England coal trade, have been cancelled by the Shipping Board. In making this announcement, Chairman Hurley said the vessels would not be needed, because it has been found possible to use some of the 3500-ton wooden ships for this service. The contracts called for an expenditure of $25,-250,000, but work had not been started on any of the vessels. Mr. Hurley also announced that about 100 wooden ships now building will be altered for use in the oil trade between Mexico and the United States.

The Government has placed contracts with a Detroit yard for concrete barges, which are to be used on the New York State barge canal, according to "Greater New York." Two of the vessels already are under construction and others are expected to follow when all mechanical equipment has been installed and the construction basins completed. The barges are 150 feet long. They will have a capacity of 500 bulk tons. A barge can be ready for service in twenty days from the time the molds are put into place. They are being built below the water level in basins diked in at one end.

The Public
A Journal of Democracy
Poverty is A Crime!
It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was
"The Crime of Poverty"
It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.
Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.
Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

News from Abroad

New Zealand, according to the findings of its Defense Expenditure Commission, has spent £40,000,000 and equipped an army of 100,000 men without a single case of fraud being apparent.

The known coal areas in South Africa are estimated to contain more than 56,000,000,000 tons. South Africa is fourth among nations in the production of asbestos, and eleventh in the production of coal.

A general exodus of Mennonites from Western Canada is threatened on account of the compulsory school law in Saskatchewan. The Mennonites expect to make arrangements with Argentina to take up their abode in that country.

The British House of Commons, having voted 274 to 25 to make women eligible to membership, passed a motion in favor of opening all the available galleries to men and women equally, though still reserving the Ladies' Gallery for women as heretofore.

The movement to secure the vote for women in Jamaica is now well under way. A petition to the Legislative Council in support of the pending Woman Suffrage bill is receiving signatures, and the women are discussing what they are going to do when they have the ballot.

American dyestuffs are gaining a hold on the Japanese market, which has hitherto been dominated by German products. American dyestuffs, according to the United States Bureau of Foreign and Domestic Commerce, range in price from $83 to $479 per 100 pounds; Japanese-made stuffs range from $100 to $750.

Instead of raising rates in order to meet increased expenses due to war conditions, the managers of the municipal street car line of Calgary, Canada, are applying the principle of "more service, less cost." By keeping the rates down to 4 cents a ride they have increased the earnings. Workingmen's tickets are sold 8 for 25 cents, and children's tickets 10 for 25 cents.

The Premiers of British Columbia, Saskatchewan, Alberta, and Manitoba have agreed upon a plan to secure the transfer of the natural resources and school lands held by the Dominion to the provinces. The school fund derived from the sale of lands amounts to $11,600,000. There are 7,270,000 acres of unsold lands, of which 3,000,000 are estimated to be worth $40,000,000.

Takashi Hara, Japan's first commoner premier, said in a statement of his policies that although the alliance with Great Britain would remain the cornerstone of Japan's foreign relations, he wished to emphasize that his special effort would be to promote friendly relations with the United States. Premier Hara insists that his is the first Japanese Government to be based strictly on party lines.

The authorities of the Australian Wheat Board state that the amount of wheat still unsold runs into hundreds of millions of bushels. If sold to Great Britain it will be for less than $1.16 a bushel f. o. b. There is on hand part of the crop of 1916-17, all of 1917-18, and the prospective harvest of 1918-19. The guaranteed price for 1918-19 is $0.973 per bushel f. o. b., and for the crop of 1919-20, $1.05.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL.

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 13. SAN FRANCISCO, WEDNESDAY, DECEMBER 4, 1918. Whole No. 2515.

SEAMEN AND SEA POWER.

Andrew Furuseth Urges Our Country to Heed Lessons Taught by History.

Just before his departure for Europe on December 1, where he is to represent the Seamen of America in connection with matters arising at the Peace Conference, Andrew Furuseth, President of the International Seamen's Union of America, supplied the Journal with a synopsis of his address at the Cooper Union in New York City, on Sunday, November 17.

What the Conference will do with the Seamen no one can tell at this time. But the note of warning sounded by Andrew Furuseth is surely worthy of earnest consideration. For whether we will it or not, Seamen and Sea-Power will to a large degree determine the future of America.

In the present age, where men are nearly always thinking in terms of machinery it may sound somewhat unorthodox to insist that sea-power is now and always was in the seamen. However, the war just about to close has restored to the world some idea of the real importance of man-power. My statement will therefore sound less strange. Sea-power was always in the seamen, vessels were and are the tools with which the seaman works and the tools will ultimately belong to nations and races who can handle them.

Man was not designed to be on the water. He is a land-animal and he becomes inured to the sea only by long and sometimes painful training. He must learn to work with and to understand the sea or the sea will destroy him.

Spirit and skill is therefore a requisite. Spirit and skill are qualities rarely found in any but free men. We shall find if we follow the development of sea-power that it was always with the free. The less free were nearly always conquered in peace or war by the more free.

Our first information about sea-power comes from the Babylonians. There the seamen were chattel slaves. The power at sea passed from them to the Phonicians then to the Rhodians, the Carthagenians and the Romans. The seamen seem to have worked their way upward through the ages to more and more freedom. The seamen of Rome were freer than the seamen of Carthage and in the struggle between the two the freer seamen finally won.

In the North there developed a sea-power in full freedom. Bondmen were not seamen. Seamanship was free men's work. The sea-power of the North—developed in freedom—met and mastered the sea-power of the South.

The sea-power of the North passed away, partly because of the changing of trade-route. But mainly because of the black plague, which destroyed practically the whole population of the Northern countries. It lingered a while in the Hanseatic League but the treatment given to seamen was such that free men could not be induced to seek the sea for a living.

With the coming of Christianity into the North the freedom of the seamen was diminished. In the South the teachings of Christianity modified the seaman's status; but when the two systems met and mingled, being carried overland by missionaries, the seaman lost freedom in the North. From being a free man he became the child of the vessel. While on the vessel his status became that of the serf on the estate. Such is the status found in the law of Visby, an island in the Baltic.

The Norse seamen in their migration South took at least a part of their freedom with them and in the Law of Oleron (an island on the coast of France belonging to England) the seaman is known as the companion of the vessel. In the Consulate of the sea (the Spanish sea-law, written by the Goths) there is still more freedom than in the law of Visby and far more than in the old sea-laws of the Mediterranean.

It was under this law that Spanish sea-power grew strong enough, together with the sea-power of Venice, to meet and destroy the sea-power of the Turk in the battle at Lepanto.

The Spanish merchant who largely influenced the laws and treatment of the seamen of Spain was, as usual, thinking mainly of his ledger—his loss and gain account—and he gradually so changed the laws and the treatment that, like the merchant of the Hansa League, he could not induce his own countrymen to serve him at sea. Then the sea-power of Spain waned until she could not man the splendid warships so admired by Admiral Nelson. Her sea-power was tested against Holland and failed. Holland had more high-spirited, more skilled and freer men. Holland was sending some of its best blood to the sea.

The Spanish sea-power met the English sea-power and was crushed. The British seamen were yet practically living under the law of Oleron, the freest and best sea-law of the Middle Ages.

The Dutch or Hollanders starved and keel-hauled their seamen until they were compelled to go to other nationals for a very large number of their seamen. They obtained a large number of seamen from Norway, whose population was beginning to be restored, and after a while Norway furnished those seamen with tools—vessels.

Then the Norwegians and Danes became very serious competitors of Holland.

The sea-power of Holland met the sea-power of England and was crushed. Her merchants governed the seaman and treated them so that the Hollanders refused to come to the sea.

France tried very hard to develop seamen and sea-power; but she made her seamen the least free in Europe under the system of Inscription Maritime. Under this system the seamen are inscribed with the Navy at the age of 18 and so remain until the age of 45. The seamen are furloughed from the Navy into the merchant service and they are never free—their body never belongs to themselves during such period, wherefore the French were always short of seamen and therefore lost all their wars on the sea against England.

About the middle of the eighteenth century the British robbed their seamen of such freedom as they had been accustomed to and the seamen of Great Britain fought under the flag of America against their native country because of this injustice. That America had already adopted the English law was not understood at that time. Besides, while the law was on the statutes it was seldom used. The hardship was not experienced, the injustice was not felt.

America was sending some of its best blood to sea and as the seamen of Britain in the time of Elizabeth so improved the rig and sailing qualities of their vessels that they could destroy the Armada by fighting under sail, so did the American improve the sailing and maneuvering qualities of their vessels, that when they met the British on nearly even terms as to guns the American nearly always won.

America did not lose her sea-power because of the Civil War. She lost vessels, yes; but it was America's failure to free the seamen, when she freed all other men, that destroyed the sea-power of America. The seamen, held down by their status, could not follow the upward trend of society. Not earning sufficient to enable them to marry and raise a family they quit the sea. America lost her seamen because she lost her ships. It was always thus; the decline in native seamen is followed by decline in vessels. The tools follow the men into other nations or races.

The status of the seamen must be at least equal to that of men on shore; the wages of the seamen must be about the same as that of men with about equal skill on shore or men will not come to sea, or having come, they will not remain.

The wages of the seaman depend upon the port in which he is employed, or shipped, and the wages in such ports are largely determined by the common wage level of the country in which the port is located. In such ports wages are the same to all countries' vessels. Hence the English, the German and the Norwegian could obtain the cheapest labor in the world by hiring men in India or China. Some Americans trading to the Orient did likewise and when they got away from the American wage level those few vessels could compete in that trade; but the American refused to sail and America was without seamen and therefore without sea-power.

The wages in American ports were about 20 per cent. higher than the wages in England, about 22.5 per cent. higher than the wages in Atlantic and North Sea ports on the Continent, and about 30 per cent. higher than the wages of ports in the inner parts of the Baltic and the Mediterranean. But it was about 400 per cent. higher than the wages of India or China and about 300 per cent. higher than the wages of Japan.

Manifestly, the American could not compete even though he paid wages so low than he drove his own people from the sea. The

American shipowner and merchant applied to Congress for relief against the higher wages of his competitors and Congress, in 1884, tried to equalize the wages by permitting the shipowner to hire his men in the lowest wage ports and compelling those men to remain with the vessels in ports where wages were higher.

This drove the remaining Americans from the sea and when the war began we had very few ships and still fewer seamen. Obviously, the policy was wrong. Native seamen and sea-power were not to be found on that road. We used our police force to arrest, detain and return deserted seamen to their foreign vessels and thus helped our competitors to drive us from the sea. Manifestly, that was wrong. A sane man does not continue a policy under which he gives his competitor every advantage. He will first try to come down to his level and if that be impossible, then he will try to bring his competitor up to his level as in the abolition of chattel slavery.

Congress tried to bring the wage rate of seamen on American vessels down to the lowest competitor. It failed. Congress then, in passing the Seamen's Act, tried to bring our competitors up to our level. This has succeeded on the Atlantic, where the law has had some chance. So far, it has not touched the Japanese. This is not because it cannot. It is because the Japanese seamen were advised by the American seamen to wait until the law is tested out on the European seamen and ships. If, as we expect, the law is upheld by the Supreme Court, the Japanese will try it out and then we shall see how the wages of Japanese seamen may be raised, first in American ports and then at home.

Of course, the war has interfered seriously with the equalization process. The English seamen were sent to long terms of imprisonment for deserting in the United States and then coming back home in some other vessel at the wage rate of America. This was done under the Defense of the Realms Act. The French seamen are inscribed in the Navy. For them to desert during war is desertion from the Navy and punishable by death.

Let the Seamen's Act stand. Let it be properly enforced. Up to this time it has not been. The language clause is in hibernation. Let it, too, come into the open air. We shall then have seamen and, having seamen, we shall have sea-power. If the other nations adopt the principles of the Seamen's Act they will not be hurt; if they refuse they lose out. Economic laws are no respecters of nations or of individuals—under freedom. They can be set aside, as we did in the case of seamen, but the penalty is certain and terrible. Such is the lesson of history. Let America be true to her own highest ideal—freedom—and seamen and sea-power will be hers.

THE PRE-WAR WAGE LEVEL.

In commenting upon the speech of William H. Barr, President of the National Founders' Association, before that organization in New York recently, in which he maintained that the eight-hour day in American industry should be abolished and wages reduced to a pre-war level, Frank P. Walsh, just resigned as joint-chairman of the National War Labor Board, said:

"I consider it most deplorable that immediately following the patriotic outburst of our people over the victorious close of the war that a man, assuming to speak for large employers, should have for his first utterance that the workers of America must be deprived of the eight-hour day; implying that the eight-hour day was something that was extended to labor as a war measure.

"The fact is that the fine thought of this country, in both the ranks of workers, employers and the general public, is with the declaration which President Wilson made almost five years ago, to the effect that society had reached the point where it was insistent in its demand that no man should be compelled to work over eight hours a day in order to earn a living.

"This was not, even at that comparatively early date, an arbitrary announcement, but simply a declaration of a palpable economic and physiological fact: That man's best effort and fullest life can only be accomplished when he is not taxed beyond his physical strength by his daily task and when he has sufficient time for his mental development and recreational needs, all of which are a necessary basis for useful citizenship.

"The so-called basic eight-hour day, which is criticized as being a mere scheme for raising wages, will disappear when the actual eight-hour day is installed with a fair living wage for eight hours' work. When men insist upon working more than eight hours a day it is because they cannot make enough to live upon in comfort during eight hours.

"As to wages: It may be a startling fact to some, but nevertheless the research of our Government shows conclusively that prior to the war the great majority of the common laborers of the country were earning far below enough to live upon. The deficiency was made up by public and private charities, so that the community as a whole carried the heaviest burden of the cost of industry. With the increased cost of living during the war, it was found that the lowest possible wage upon which a worker and his family could subsist in health and reasonable comfort was 37½ cents per hour; this, of course, based upon the actual eight-hour day.

The National War Labor Board fixed the minimum rate for common labor at 42½ cents per hour, a bare subsistence wage. If the industries of the country are to be on a self-sustaining basis after the war and common laborers are not to be forced to live in part upon charity, it is obvious that there can be no reduction of wages, at least in the field of common labor.

"Likewise, as to the wages paid skilled mechanics, considering the preparation for the work and the value of the product turned out, as well as the colossal fortunes gained by others from their energy and skill, in my opinion no disinterested person who has made a careful study of the question can honestly say that wages of skilled craftsmen in general are too high today, even for peace time.

"The fact is that on account of economic repression of various kinds, workers prior to the war were not in a position to secure anything like the fair fruits of their efforts from employers. War necessity, shortage of labor supply, accelerated movement in trade union organization and a desire upon the part of the Government, as well as many large employers, to deal justly with workers, all have operated to bring wages to the present general standard.

"When the cost of necessities of life diminishes to a pre-war level (which I doubt will occur within less than five years), then the workers in the average industry will be receiving only a fair return for their work, if present wage standards are rigidly maintained. Otherwise not.

"The reconstruction problems in industry are manifold and must be met in the highest spirit of fairness and accommodation. To throw the whole subject into the realm of bitter controversy at this time will make the task of allocating the industrial structure exceedingly difficult. None but the thoughtless have failed to observe the sweep of ultra-radicalism throughout the world; call it what you will. That it has roots in this country cannot be denied, and the situation must be faced by our common citizenship in a spirit of breadth and clear understanding.

"If America can handle its industrial and economic problems with justice and fairness and in the period of reconstruction establish a constructive program which will lead us along a broad highway of consideration and justice for the producing masses, it will not only bring enduring contentment and happiness to our people, but make our country the exemplar of the rest of the world. I confidently believe that this great end can and will be attained.

"If, however, these self-constituted spokesmen of industry (who I refuse to believe typify the enlightened employers of the country), in their fatuous disregard for things as they are, insist upon reaction as expressed in their theratened extension of the hours of labor, wage cutting, and like practices, the industrial workers of the country may take their theats seriously, make common cause with the farmers and agricultural laborers and, through peaceful political means, take charge of and operate the Government solely in the interests of the producing masses, changing our present industrial and economic regime with a thoroughness and swiftness unparalleled in the history of nations."

"THE GREAT DAY."

(By James M. Lynch.)

One of the periodicals, of large circulation, has been publishing a series of articles on business in war time. In the eighteenth installment is this prophecy: "Remember, too, that labor will be more intelligent than ever before and must be more intelligently dealt with. Labor, too, during these four years of war has been forced to think more intensively than ever before."

Labor has passed through four years of war in all belligerent nations, but in these United States not half that time in the actual sense of participation in war. Have the lessons that have been learned by labor in England, France and Italy been as thoroughly absorbed here?

Our President has said: "The old party slogans have lost their significance and will mean nothing to the voter of the future, for the war is certain to change the mind of Europe as well as the mind of America." Every program must meet this test: "Is it just; is it for the benefit of the average man, without influence or privilege; does it embody in real fact the highest conception of social justice and with right dealing without respect of person or class or particular interest?"

If the prophecy and the gospel are both correct, then indeed we may be of great hope.

Are our producers, by brain and hand, ready for the great day, to again quote the President, "a day, we hope and believe, of greater opportunity and greater prosperity for the average mass of struggling men and women, and of greater safety and opportunity for children"?

For this day we both hope and pray—and organize.

HOLD YOUR LIBERTY BONDS.

Of the many millions of acres of public lands the title of which is in the Federal Government, the United States owns some 5,000,000 acres of oil lands.

A Liberty bond holder is a bondholder of the United States, and it is a poor exchange to trade a Liberty bond for stock in an oil company of doubtful value.

By their votes men may declare for a good government, but it is only by their labor that they can realize that object.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Labor on Western Hemisphere is United.

By the formation of the Pan-American Federation of Labor the foundation for peace and good will between the peoples on the western hemisphere has been built.

This foundation is not the work of exploiters, nor of diplomats or ministers of state—it is the effort of toilers in shop, mill, mine and in transportation. It is the work of those who would develop fraternity between the peoples of the United States, Canada, Mexico and other Latin American countries.

The recent meeting of organized workers in Laredo, Texas, that resulted in the Pan-American Federation of Labor was attended by President Gompers and the executive council of the A. F. of L., trade union representatives from Mexico, Honduras, Nicaragua, Porto Rico, Costa Rica and Salvador and officers of national and international unions affiliated with the A. F. of L. The convention organized by electing President Gompers chairman and John Murray, secretary. Addresses were made by Secretary of Labor Wilson and Governor Hunt of Arizona. The former greeted the visitors in the name of the President of the United States.

"We want the right," he said, "to work out our destiny and we insist that all the people of the earth shall have the same right. The achievement of political democracy is not the end, but only the means to accomplish the end. And the end to be attained is the working out of our own problems in accordance with our own hearts and consciences and ideals, and not by the methods of some one above."

President Gompers presented a reconstruction platform that was adopted. The program consists of five basic principles and seven declarations "fundamental to the best interests of all nations and of vital importance to wage earners." The resolutions say:

"Whereas, we, the delegates of the first Pan-American Federation of Labor convention, meeting at such a critical time in the world's history, realizing that the problems now confronting humanity in the building of an enduring peace are no less acute than the problems of war, and being deeply and fervently desirous that in the reshaping of the world's affairs the most critical consideration be given those principles that make for an enduring peace and create equality of opportunities for the people of all nations; and,

"Whereas, the time has arrived when the organized labor movement, with full understanding of its rights, its power and resources, its value and contribution to society, must bring forward its most profound constructive thought, calculated to establish and insure the principles of true democracy; therefore, be it

"Resolved, That we declare that the following essential fundamental principles must underlie the peace as well as the principles of all civilized nations:

"A league of the free peoples of the world, in a common covenant for genuine and practical co-operation to secure justice and therefore peace in relations between nations.

"No political or economic restrictions meant simply to benefit some nations and to cripple or embarrass others.

"No reprisals based on vindictive purpose or desire to injure, but to right manifest wrongs.

"Recognition of rights of small nations and of the principle that no people must be forced under a sovereignty under which it does not wish to live.

"No territorial changes or adjustments of powers except in furtherance of the welfare of the people affected and in furtherance of world peace; and, be it further

"Resolved, That, in addition to these basic principles, there should be incorporated in the treaty which shall constitute the guide of nations of the new period and conditions into which we are entering, the following declarations fundamental to the best interests of all nations and of vital importance to wage earners;

"That in law and in practice the principle shall be recognized that the labor of human beings is not a commodity or article of commerce;

"Industrial servitude shall not exist except as a punishment for crime, whereof the party shall have been duly convicted;

"The right of free association, free assemblage, free speech and free press shall not be abridged;

"That the seamen of the merchant marine shall be guaranteed the right of leaving their vessels when the same are safe in harbor;

"No article or commodity shall be shipped or delivered in international commerce in the production of which children under the age of 16 years have been employed or permitted to work;

"It shall be declared that the basic work day in industry and commerce shall not exceed eight hours a day;

"Trial by jury should be established."

The convention was in session four days and the relations of workers in the various countries were fully discussed and understandings reached. The following officers were elected: Chairman, Samuel Gompers; English secretary, John Murray; Spanish secretary, Canuto Vargas. Panama was selected as the next convention city.

Frank Walsh Resigns From Labor Board.

Frank P. Walsh, joint chairman with William H. Taft of the National War Labor Board, has resigned from that body. In his letter to the President he says:

"Professional engagements, many assumed prior to the creation of the board, make it imperative that I should return to my practice at the earliest possible moment. Of course, I could have no thought of resigning, small as my actual service may have been, during the hostilities.

"Your confidence in me and many acts of kindness during my service upon the board I appreciate beyond expression; although my respect and admiration for you personally, as well as my devotion to all

World's Workers

According to press dispatches from Rio Janeiro, the Government has dissolved the General Union of Laborers on the ground that it is an anarchistic organization. The Government charges that this union has attempted to provoke a "social revolution" throughout Brazil.

The question of the desirability of providing pensions for merchant seamen was raised in England some time ago by the Navy League with the Board of Trade. To the league's proposal that the Government might, without committing itself to anything, appoint an official committee to go into the question, the Board of Trade replied that after consultation with the Treasury they did not find it possible to set up the committee asked for. They believed the most suitable course would be for the interests concerned themselves to appoint a committee to go into the matter, and for the Board of Trade and the Treasury to give the committee such information and assistance as they could. The Navy League, however, are of opinion that unless an official committee is appointed no practical result is likely to be attained.

The Soviet government has established a labor university in Moscow for the purpose of teaching all branches of social economics. A large building formerly occupied by a commercial organization has been taken over and is divided into numerous class rooms, auditoriums for meetings, a large library, etc., and a score or more of educators who command various languages are employed in teaching thousands of Russians and various other nationalities who reside in Moscow or come from other places to the new seat of learning. Thus, besides the Russians, there are faculties for Finns, Letts, Poles, Rumanians, Germans, French, English, Hungarians and Italians. The best works written by authors of all countries dealing with political, economic and social problems have been obtained and are taught from the originals or translations. It is declared that there is not a modern scientific problem relating to social progress that will not receive attention in the new Moscow university.

A report on "industrial and social conditions in relation to adult education," presented to the British Ministry of Reconstruction by a Committee on Adult Education, recommends such regulation of industry as will afford to workers the opportunities for educational development which are now lacking. As steps towards humanizing the industrial system, the Committee recommend the increased use of mechanical devices in heavy work, a mitigation of the depressing monotony of certain kinds of labor, stricter control of working hours, and a shorter working day. The importance of holidays, together with payment for such days, is also urged. In addition, a reasonable security of livelihood, perhaps by extension of the principle of insurance, should be guaranteed to the worker, and the question of unemployment should be considered. The committee advocate the inclusion of women in the membership of the committees which it proposes should be formed for the consideration of housing, town planning, public health, and other matters.

NOTICE.

Masters, Mates and Pilots' Association of the Pacific has opened a branch office at 529½ Beacon St., San Pedro, Cal.; Capt. H. C. Frerichs, Agent.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Pacific Coast Marine.

Figures compiled by the auditor of the port of Seattle showed that for the ten months ended October 31st the publicly owned marine terminals had earned $512,000 above all operating expenses, including interest and redemption of bonds, for that period, and the Commissioners immediately authorized the taking of steps to insure the port properties of their share of the anticipated Siberian trade.

The wooden auxiliary schooner "Soissons," last of a fleet of twenty vessels built on the Columbia River by the Foundation Company for the French Government, was launched during the week. Bayly Hipkins, Pacific Coast manager of the company, announced at the launching that he hoped by the first of the coming year to announce arrangement for the continuation of operations at the Foundation yard on new contracts whose nature he was not at present at liberty to disclose.

Many of the steamers of the Standard Oil Company's fleet of tankers that were shifted to the Atlantic at the beginning of the war may be shifted back to the Pacific in the near future, according to rumor along the waterfront. The "Tecumseh" sailed from Liverpool for San Francisco November 24, and others are expected to come later. Owing to the congestion in the transaction of business over the cables the reports of arrivals and departures at foreign ports are from one to several days late in delivery here.

If wooden ships are to be operated profitably, better rates of insurance will be necessary on cargoes, according to the local shipping men. They say that the rates set on wooden ships put them at a disadvantage, and in order to make it possible to meet keen competition when conditions become normal it is necessary to appraise each vessel at its worth. The opinion is advanced that some of the wooden ships have proved satisfactory all around and a low rate is justified and that it is not fair to judge the performance of all by that of the "Blackford" and "Coos Bay."

Creditable performances of four newly built wooden ships are reported following twenty-four-hour trial trips, which recently were expected to test out the fitness of the vessels. The trips were made on the ocean, where all the elements of wind and gale are apt to be encountered. The ships which were tested are: "Isaqueena," built by the St. Helens Shipbuilding Company; "Latoka," built by the Grant Smith-Porter Ship Company; "Moraine," constructed by the same firm at the yard at Aberdeen, Wash., and "Bonifay," built by the Wilson yard at Astoria.

To meet the expected increase in maritime commerce at the port of San Francisco, the State Board of Harbor Commissioners has fixed the estimate of new work at $3,037,414. This proposed expenditure is for improvements that have been planned for some time as an after-the-war policy of the commission, the various items in the list having been announced. The estimates were submitted by Chief Engineer Frank G. White, who fixes the cost of the first units of the Islais Creek terminal at $1,010,000. This amount is to be spent for bulkhead wall and wing wall; dredging and fill and for the two-story and other wharves.

Although three Government contracts for wooden steamers have been canceled, no shutdown of its Eureka (Cal.) yards is contemplated, officials of the Rolph Shipbuilding Company announced during the week. While it is reported on apparently excellent authority that the Rolph company has contracts for ten more vessels to be constructed locally, in addition to the seven now on the ways, confirmation of the report is lacking. The Rolph company now has five uncompleted steamers on the ways, as well as two barkentines half completed. While no statement is forthcoming from the Hammond yards, it is believed that vessels for private owners will supersede the Government hulls now under construction.

Normal conditions of travel are fast being restored coastwise between Puget Sound, San Francisco and Southern California was announced by General Passenger Agent E. Grant McMicken of the Pacific Steamship Company. McMicken has been in Seattle for several months and will visit San Francisco and Southern California for about ten days. The installation of a special round-trip rate on the steamers is in part responsible for the popularity of the ocean trips. Another reason given by McMicken is that there are thousands of residents of British Columbia and the Northwest who have planned to spend their winter vacations in California, where the climatic conditions are more pleasant. The moment it was announced that the influenza had been conquered here the bookings on the steamers increased.

The service of the Union Steamship line between San Francisco and Australia is to be reduced by the withdrawal of the steamer "Paloona." This is due to the fact that the vessel, which arrived at Wellington October 30, is being kept there and will probably be placed in the interports of the Commonwealth because enough cargo cannot be booked to fill the vessel for a trip to San Francisco. There is plenty of freight offered, but the majority is not on the essential list, and no permits can be secured by the shippers. The embargo on tallow and hemp is a serious feature, and means that sufficient cargo will be lacking for all craft sailing to this port unless enough copra can be secured. The "Moana" is expected to take all of the "Paloona's" cargo in addition to its own, and will therefore continue in the service.

According to the McCormick Steamship Company, the saving made by the adoption of the internal combustion engine on the "City of Portland" amounts to more than 50 per cent. over that of a steamer of similar size and draft. Officials of the company said that the Bolinders on the vessel gave a bit of trouble the first trip or two, because it was difficult to get the right kind of men in the engine department. Regular gas "skinners" were then employed, and after a bit of tinkering the new organization adopted the Bolinders as the average American does an automobile, and since that time the engines have run smoothly. The vessel has consumed an average of twenty-two barrels of oil a day, as against more than sixty barrels, and as the engines take less space, a vessel's cargo-carrying capacity is nearly 20 per cent. greater.

Frank Waterhouse & Co. have been assigned six of the Shipping Board wooden ships for offshore service, according to advices received from Puget Sound. This indicates the Shipping Board is certain wooden craft are fitted to do offshore work. This opinion is based upon the fact that several of the Ferris and other type of wooden ships have successfully negotiated the passage between Pacific Coast ports and the Atlantic, and, according to the reports received here, the cargo has arrived in first-class condition. The vessels assigned to Waterhouse include a number of "lame ducks," however, that will have to be repaired before they are turned over for operation. One is the "Abrigada," noted as the first carrier launched for the Government. This vessel broke down off the Coast and is being repaired. Another is the "Manada," which made the trip to Honolulu for a cargo of pineapples, and a third the "Forster," which put into this port for repairs.

The wooden shipbuilding program has proved a success, and the wooden hulls will be of inestimable value in rehabilitating coastwise shipping, according to John K. Bulger, supervising inspector of hulls and boilers, who has just returned to San Francisco from a month's visit to northern ports. "Wooden ships constructed with proper care should give the desired result on their initial trips," said Bulger. "The steamers 'North Bend' and 'Blandon,' built at Portland, which gave a little trouble at first, underwent repairs and are to-day first-class vessels of their type. These vessels have delivered two cargoes of sugar from the Hawaiian Islands in perfect condition. If the rules formulated by the United States Shipping Board are strictly complied with operators will find the wooden vessels staunch and seaworthy. The building of staunch wooden vessels on the Pacific Coast is nothing new. The Pacific Mail Steamship Company operated wooden vessels of from 3000 to 4000 tons to Pacific ports fifty years ago, and did not experience any trouble as to their seaworthy qualities. Modern vessels of from 12,000 to 14,000 tons should be of steel construction and the modern ship for offshore competition should be of this tonnage, with a speed of not less than 13 to 13½ knots. The larger, faster steamers are more economical in operation and of greater earning capacity if the operators keep them busy with capacity cargoes. The wooden vessels, however, for coastwise purposes should not be eliminated, but their tonnage should not exceed 2000 to 2500 tons." The wooden steamship "Wakau," concerning which some trouble was reported recently, was not built by the Peninsula Shipbuilding Company of Portland, as stated, but by the Grant Smith-Porter Company, St. John, Columbia River.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, DECEMBER 4, 1918.

THE I. S. U. OF A.

The Call for the twenty-second annual convention of the International Seamen's Union of America was published in last week's issue.

In the twenty-second year of its life the International Union has become a strong and healthy youngster. The membership is close to the 50,000 mark and every indication points to still further growth and development. Of course, but comparatively few of those 50,000 can appreciate the real significance of such a membership. For several years prior to the enactment of the Seamen's bill the actual membership of the International was in the neighborhood of 16,000. Those were hard, lean and often discouraging times. The old Atlantic Coast Seamen's Union was termed a baby that would not grow and refused to die. To-day that tender baby, now called the Eastern and Gulf Sailors' Association, leads all District Unions with a membership in excess of 10,000 and has not by any means stopped growing.

In the days gone by the bulk of the International's membership was along the Pacific Coast. To-day there are more organized seamen and fishermen along the Atlantic Coast than in the Great Lakes and the Pacific Districts combined.

In the lean years the District Unions' treasuries, with few exceptions, were always at a low ebb. To-day the combined assets of the organizations composing the International Seamen's Union of America are very close to three-quarters of a million dollars.

To translate these figures and summaries into the every day life of the individual member—i. e., to make it perfectly clear what collective self-help, self-reliance and self-dependence has accomplished in improving conditions for all seafarers—that is a long, long story indeed. It is a tale that can never be told. It must be "lived through," for no one can ever know the sea and the seamen's life unless he has been "there" living it, cussing it, and with all enjoying it because it is a man's work. During the war, more than ever before in history, the seamen of America have had the opportunity to show their mettle. And their record in this respect is as bright and proud a chapter as can ever be written in the annals of mankind's struggle for freedom.

Those who have recently come to join the ranks of the International Seamen's Union of America will probably find it hard to understand how the Union has gained its present solid footing. Well, it was not accomplished by self-admiration. It was not done in a year, nor in a decade. The long sustained efforts of the organized seamen to secure just laws from Congress were made possible only by one means—Organization! Only by Organization have the seamen derived any success, any benefit, any law worth having. Organization means men's willingness "to stick to it." In other words, this means "to hold on," to suffer defeat and still hold on, to receive sneers with smiles, to suffer and endure for the sake of the common good, and to look forward always to the ultimate goal—justice and equality among all men on sea and land!

Such has been the work, aim and aspiration of the International Seamen's Union of America. And the next convention at Galveston, Texas, will be just another mark on the big tally sheet of time that will ultimately record complete success.

THE PEACE CONFERENCE.

Contrary to general expectation President Wilson did not appoint Samuel Gompers as a delegate to the Peace Conference. The official United States delegates to the Conference are: President Wilson, Colonel House, Secretary of State Lansing, former U. S. Ambassador White and Brigadier-General Tasker H. Bliss. Of course, Gompers will be there anyway. He and four other members of the American Federation of Labor's Executive Council, Messrs. Duncan, Green, Alpine and Duffy, will officially represent organized labor of America at the International Labor Conference which, according to previous arrangement, is to be held at the time and place where terms of a world peace are to be determined.

The well-advertised demands of organized labor, as adopted at the Interallied Labor Conference in London and again at the more recent Pan-American Conference in Laredo, Texas, will doubtless have the approval of the U. S. delegation to the Peace Conference. There is nothing unfair or ultra-radical in these demands. The point is: Will there be a sufficiently persistent or sustained effort to embody in the peace treaty the gist of the International Labor platform? Just another "proclamation" from the International Labor confab, to be held at the time and place of the Peace Conference, will certainly not fill the bill.

Nothing short of actual recognition and formal acceptance of Labor's points should satisfy the rank and file of organized labor in America. The labor movements in fourteen of the principal European countries have agreed to insist upon this step and they are appealing to the proper high government officials in each of those countries, demanding that labor receive no less consideration than commodities and credits when international agreements are being formulated around the peace table.

It will be recalled, in this connection, that in 1906 two international labor treaties were signed—one by fourteen countries—in reference to the industrial employment of women at night, and the other prohibiting poisonous phosphorus in the manufacture of matches.

Thus it must be conceded that it is perfectly feasible to establish certain minimum guarantees which the countries represented at the peace table will feel morally bound to carry out through appropriate legislation within a given time after the peace treaty is signed.

The organized merchant seamen of America, Great Britain, Italy, France and other maritime countries in Europe are, of course, especially concerned with the possible establishment of minimum guarantees. Much has been said in this respect about the attitude of Chairman Hurley of the U. S. Shipping Board, who recently left for Europe. Mr. Hurley has been quoted as planning to seek an international agreement between the governments, shipping interests and labor organizations of the principal maritime powers for standardization of seamen's wages and working conditions.

It was also reported that Mr. Hurley expects to propose that the American laws and the agreements between the government and the seamen's unions on these subjects be accepted as the standards and include that the spokesmen for the American Federation of Labor and the powerful National Sailors and Firemen's Union of Great Britain and Ireland are prepared to support the proposal.

The JOURNAL has no direct and authentic information upon Mr. Hurley's views on the proposed international "standardization of seamen's wages and working conditions." This much is certain, however: Mr. Hurley does not favor a lowering of the American seamen's standard.

In an interesting article entitled "American Ships on the Pacific," published in the November issue of "Asia," Mr. Hurley quite frankly presents his views on the Seamen's Act and other matters connected with our new merchant marine. To quote:

> It is unfortunate that sea wages have occupied so much of our thought in connection with merchant ships. The American Seamen's Act is a high-wage law and has, therefore, been a burning question. It seems inevitable that all discussions of American shipping must begin with a debate about a coolie and a bowl of rice, and in many cases never get any further. Read shipping testimony before Congress and this problem of wages dominates. Talk with shipping men and you will find it is ever present in their thoughts.
>
> Now it may be that they are right—that in the future, after we have made practical efforts to operate American ships with American crews, paid American wages and living under American standards, we shall need cheaper labor to hold our own in competition.
>
> But if that proves true, then the American merchant marine will run counter to most of our industrial experiences. We haul freight on the railroads and the Great Lakes cheaper than any nation in the world, and do it with American labor under American conditions. Most of our foreign trade in manufactured goods consists of products made by the best-paid American workmen—automobiles, typewriters, and office machinery, agricultural implements, steel and other metal products. We have learned at home, as business men, that it almost invariably pays to raise living standards and wages, and I believe that this is as true upon the oceans as it is upon land.
>
> Wages are by no means the only factor in management. If you have an up-to-date plant and run it at high efficiency with a scientific cost system, and can create a large, steady volume of business through intelligent sales work and good service to your customers, wages may be an entirely secondary matter—indeed, by utilizing these other elements of good management, you may be able to increase wages. That is true in manufacturing, and I believe it to be true of merchant shipping.

The foregoing paragraphs will give little aid or comfort to that group of Americans who have been most persistent in their efforts to Chinaize our Merchant Marine. On the other hand it should encourage the organized seamen, the world over, to aim at nothing less than the American standard, established under the beneficent features of the Seamen's Act of 1915.

JUSTICE FOR TOM MOONEY.

The commutation of Tom Mooney's death sentence to life imprisonment does not settle anything. Either Mooney is guilty and deserves to hang, or he is innocent and should go free—after a fair trial, which it is generally admitted he has not had.

The judge who tried Mooney formally asked the Governor of California to pave the way for a new trial. The Attorney-General of California stipulated in open court that the case should be reversed. The Supreme Court of the State held, however, that it was without power to act upon such a stipulation in a criminal case.

So there was only one way to assure a new trial. And that was to grant a pardon. In that event the District Attorney of San Francisco would be practically compelled to try Mooney on one of the other indictments still hanging over his head.

Governor Stephens, in commuting the death sentence of Mooney knew very well that this was just what Mooney's persecutors would want him to do. Now they do not have to try Mooney again, and the probability of having to go through another trial is what they dreaded most of all.

Meanwhile, the unspeakable Fickert, exposed by the Densmore revelations as a "framer" and "fixer" of justice, is calmly holding down his old job as District Attorney of the City and County of San Francisco. With characteristic effrontery some of the daily papers are already attempting to shift popular wrath from the real malefactor to the man who exposed him. It is gratifying to note, however, that to this date no labor "leader" has publicly come to Mr. Fickert's rescue. In the whole sordid mess of corrupted justice this is the one shining phase which should cause general satisfaction. It shows that Fickert is being isolated politically, slowly but surely. The underworld and the "law and order" brigade of the San Francisco Chamber of Commerce still swear by Fickert, but his former allies in labor circles have deserted him just as suddenly as the Bulgarians quit the Kaiser's tottering crew.

From all accounts received to date, organized labor throughout America is not at all satisfied with the turn things have taken in the Mooney case.

Labor has surely saved Mooney's life. But it still remains to be seen whether or not the same propaganda that saved a human life from the gallows will be sufficient to secure for Mooney that fundamental requisite of all democratic institutions which every true American regards as priceless and which can be fully defined in one word—Justice!

Justice in Tom Mooney's case demands no more and no less than a new and fair trial.

While Andrew Furuseth is in Europe, Patrick Flynn, First Vice-President of the International Seamen's Union of America, and Secretary of the Marine Firemen's, Oilers and Watertenders' Union of the Pacific, will look after legislative matters at Washington, D. C. Patrick Flynn is eminently qualified for work of such an important character, and all who know him will be pleased with his selection for this post of honor and responsibility.

An hour off the day's labor is an hour added to the day's life.

THE "RED TERROR" IN RUSSIA.

Instructive Correspondence Between the Soviet Government and the Representative of Neutral Nations.

The Journal is indebted to the New York "Nation" for the following correspondence between the Swiss Ambassador to Russia, speaking in the name of the neutral Governments, and the People's Commissary for Foreign Affairs, is printed at Zürich by "Fritz Platten, National Councillor." The reply of M. Tschitscherin is probably to be regarded as a violent, but otherwise typical, statement of the Bolshevist position. It will be observed that the fact of the outrages against which the neutral diplomats protest is not denied.

The Note of the Neutral States.

To the People's Commissary for Foreign Affairs at Moscow:

Inasmuch as the representatives of the diplomatic corps at Petrograd were able to ascertain, definitely, the mass arrests of persons regardless of age and sex, as well as the summary convictions imposed by soldiers of the Red Army day after day, they requested a conference with Commissary Zinvieff and were received by him on Monday, September 3. They declared that it was not their purpose to interfere in any way with the struggle between political parties now raging in Russia; they desired only from the standpoint of humanity and in the name of the Governments which they represent, to express their most profound indignation at the régime of terror introduced in Petrograd, Moscow, etc.
